Fig. 1 shows the character of swamp and swamp growth. Fig. 3 shows the character of swamp and swamp growth. Fig. 4 shows a swamp after clearing.

The covering was run out onto the swamp in 10-car trains running on tracks of 60-lb. rails carried on 8-ft. ties laid on the cover. After dumping, it was spread to about 12 in. depth, over the shallower and dryer swamps, while on the deeper swamps it was necessary to increase the depth of cover to about 18 in. This would usually support the load satisfactorily, and it was surprising to see how elastic it was. As the trains passed over the surface would deflect several inches, forming a wave under the traffic, but as long as the covering did not become saturated by absorbing the swamp water by capillarity, it would satisfactorily sustain the load. A large part of the cover was spread by hand, but later the tractor provided car scrapers which were operated by locomotives. Fig. 3 is a general view of the covering operation. Fig. 4 shows a swamp after the covering was spread.

the samples from these spots, and the samples from the bottom of the core. The material was analyzed for the presence of all the elements and the results are given in Table I. The material was also analyzed for the presence of all the elements and the results are given in Table I. The material was also analyzed for the presence of all the elements and the results are given in Table I.

Fig. 1. Character of Swamp Growth

SWAMPY BOTTOM OF BOTTOM OF KENSICO RESERVOIR

Fig. 2. After Removing Growth

Samples were procured from the bottom of the old Kensico Reservoir, built in 1884. This reservoir covered 250 acres to a maximum depth of 15 ft. The area was a rolling open valley of glacial origin with a light soil underlain by the organic condition of the original bottom soil, and partially low years has accumulated to an extent to surprise. Samples were taken from several of the storage reservoirs of the city which receive water only through aqueducts or pipes from the haphazardly re-cycled. Twelve samples of the bottom silt from the Croton reservoir in Central Park averaged 10.5% organic matter, while four samples from the Williamsbridge Reservoir, receiving water up to 18 in. and averaged more than 6 in. These results

To further demonstrate the character of reservoir silt, samples were taken from several of the storage reservoirs of the city which receive water only through aqueducts or pipes from the haphazardly re-cycled. Twelve samples of the bottom silt from the Croton reservoir in Central Park averaged 10.5% organic matter, while four samples from the Williamsbridge Reservoir, receiving water

Fig. 3. Covering Swampy Area of Kensico Reservoir

The size of the deposited sludge particles also plays an important part in this matter. Disintegrated sludge particles, if not too fine, will gasify much quicker than coarse ones. It is important whether feces reach the sedimentation tank well broken up or in large pieces, as it is known that feces retain their floating ability for a long time, apparently because their compact structure offers a considerable resistance to the liberation of the inclosed gases. Finally, the manner in which the sludge particles settle, their sticking together through fat, hairs, etc., have great influence on the formation of sludge cakes, which to a great extent form the sludge cover. The influence of the intensity of the gas formation will be greater the deeper the sludge layer is. With a small free surface, where it can accumulate, the forming scum cover will be thicker. If the surface is too small for the scum, too many gas-laden particles will rise, so that the top layers cannot get rid of their gas quickly enough to sink.

A disadvantage of such a cover is that after it reaches a certain size the rising sludge cakes seek a way out through the open slots to the sedimentation chamber.

Different methods in practice have been tried to destroy and sink the scum covers, such as stirring it with poles or breaking it up with high-pressure water. None of these have been a permanent success, as they do not accomplish the necessary continued mixing of the newly rising sludge. This can only be done by the installation of a mechanical agitator or apparatus, which not only stirs the sludge, but also brings about a thorough mixture of the sludge with the sewage.

The sludge entering the sludge chamber should be well disintegrated. Any scum cover in formation should be broken up by a stream of sewage under high pressure, mechanical agitators, or lowering of the water level in the sedimentation chamber. The plant always ought to be so designed as to have a sufficiently large surface for the escape of the gases.

The appearance of frothing (spitting) in an unripe sludge-digesting chamber is a mere secondary phenomenon. It is similar to the so called "hut" formation in yeast fermentation, and is mostly caused by large amounts of gas rising to a small surface and carrying the sewage and finely divided sludge with it in the form of bubbles.

In ripe sludge-digesting chambers, the scum formation is much lighter and not liable to cause trouble, as the rising sludge is well mixed with sewage and the sludge at the surface loses its gas more readily than fresh sludge, not forming as much gas. But it must be removed from time to time. The spitting and frothing and entrance of sludge into the sedimentation chamber are generally caused by a too heavy floating layer or a too large accumulation of undissolved matter in the sludge-digestion chamber, in which case the gas will carry up froth if the free surface is too small. This can be helped by simply drawing off some of the sludge or permanently prevented by keeping the sludge at a permanent level.

(3) THE DIFFERENT TYPES OF FRESH-WATER CLARIFICATION PLANTS WITH SEPARATE SLUDGE DIGESTION

Injurious formation of scum covers, frothing or spitting of the sludge-digesting chamber, acid sludge and, finally, acidulation of the supernatant water are the operating difficulties which are liable to appear in sludge-digesting plants if there is not sufficient room provided to accommodate the floating sludge, a too heavy formation

of scum prevented and the sludge withdrawn at the right time.

The sludge-digesting plants under discussion can be divided into two groups. The first group includes those plants in which the sludge-digesting chamber is below the sedimentation chamber, and is connected to it by open slots, through which the sludge drops automatically. Under this head come the Emscher tanks, the Travis tanks, Kremer septic tanks (Kremer-Imhoff tanks), Stiaq tanks, Spree tanks, Bus tanks, etc. To the second group belong those in which the sludge-digesting tank is a separate unit and is located beside the sedimentation chamber. The fresh sludge is periodically pumped or drained from the sedimentation tank to the sludge-digesting chamber.

SLUDGE-DIGESTING CHAMBER UNDER SEDIMENTATION TANK

These plants have the great advantage of an automatic sludge separation. But if the sludge is not removed at the right time, rising sludge will enter the sedimentation tank, which is a common occurrence in spite of the overlapping edges of the slots. Difficulty is found in giving the right dimensions to the sludge-digesting chamber in proportion to the sedimentation tank.

All installations coming under this group require expert supervision while ripening. To avoid acid sludge or a heavy sludge cover, which almost always gives an acid reaction, it is recommended to fill the digesting chamber only partly with sludge during the ripening period, and always to keep the sludge at the same level by periodically removing a like amount of sludge. As putrefactive decomposition can only take place while the sludge is alkaline, it has to be kept so at all times—if necessary, by the addition of chemicals. For protection against floating sludge covers, it is to be recommended from a technical point to make the free surface of the sludge-digesting chamber not too small. The partition walls between the sedimentation and digesting chambers should be so arranged that no sludge can collect under them and that the sludge carried up by the gases will be deflected either to the open surface at one side or the gas vents directly over the digestion chamber. The latter should be of sufficient size. Wide longitudinal openings, as are used on the Travis tank, seem to be the best. The long sludge chamber of these and similar plants should be divided into two parts, as in ordinary septic tanks: a larger chamber in which the sludge is digested, and a second smaller chamber in which the sludge particles carried up by the gases are separated. To obtain the largest possible surface and save construction costs, this Institute has sometimes recommended the use of earth ponds with large free surfaces as sludge-digesting chambers.

SEPARATE SLUDGE-DIGESTING CHAMBERS BESIDE THE SEDIMENTATION TANK

Under the head of separate sludge chambers, located beside the sedimentation tank, come the designs of Furstner, Mondrion, the Neustadter sludge tank, etc. Opposed to the disadvantage of the cost of pumping is the not-to-be-lightly-valued advantage of the complete separation of the sedimentation tank from the sludge tank, so that the latter can never have any detrimental influence on the former. Besides the possibility of unlimited extension, separate sludge tanks have the further advantage that they are very accessible and easily inspected. The decomposi-

tion of the sludge in it followed in all its stages and can be made as necessary or desirable. With high ground water the first cost of the shallow tanks will be considerable.

Sludge tanks digesting tanks can be built as single tanks, or as continuously filled (Forster), or as a series of tanks which make a continual operation possible (McCormick tanks). A good sludge digestion is obtained in all types. The single units require individual expert operation, but the continual (daily) operation of tanks in series can be made almost entirely automatic. The first mentioned construction can be easily arranged so that the tanks can be operated either as units or in series. In arranging the tanks in series, the different processes can be separated. The brisk decomposition of the sludge and sewage will take place in the first tank, and in the last tank the sludge can be "washed" by the introduction of clean water before it is drawn off. The advantage of washing the sludge in no way interferes with the addition of the sewage, necessary for a brisk decomposition. Sewage should always be introduced into the first tank, if not enough is contained in the withdrawn fresh sludge. The following arrangement can be recommended: The clean water should be introduced into the tank that contains the best digested sludge, then passed from there to the tank that contains the second best sludge, etc., until it is let off, so that the sludge in a certain stage of digestion never comes into contact with sewage from a sludge in a less advanced state of decomposition. The capacity of such tanks ought to be about the same as those that proved sufficient for Emcher tanks.

RESUME

Fresh-water clarification plants, with a separate sludge digestion, considered as a whole, are a distinct advance in the art of sewage and sludge treatment. They simplify the mechanical clarification of the sewage, lessen the sludge nuisance and have advanced the solution of the sludge question.

The statement of a good sludge did not prove to be such a simple matter as was originally supposed. Communities which have their plants built by contractors will do well not to leave the plants until the sludge digestion chambers are a good sludge. Very careful preliminary investigations should be made in each case to find out whether such a measure is suitable to local conditions. The contractor should be given to the difficulties of construction in advance. Other points to which attention should be given are: Whether the sludge-digesting chamber is to be built below or beside the sedimentation tank; whether the tanks should be used, also whether a separate sludge-digesting tank is to be used, and whether the sludge is to be incinerated.

As the sludge digestion is a very expensive item, it is essential that the sludge be used for something. The sludge can be used for fertilizer, or for the production of gas, or for the production of brick, or for the production of cement, or for the production of other products. The sludge can also be used for the production of other products, such as cement, or for the production of other products, such as cement, or for the production of other products, such as cement.

Repairing and Resurfacing Bituminous Pavements

By SAMUEL H. LEA*

A cheap but effective method of renewing the surface of old bituminous pavements was employed by the writer recently on some streets in Charlotte, N. C. In this city there is a considerable area of "bitulithic" pavement, laid in 1907-'08 under a 5-year guaranty by the contractor. Since the expiration of the guaranty period it has become necessary for the city to maintain this pavement.

FAILURE OF MACADAM FOUNDATIONS—The area under consideration comprises some of the principal business streets in the heart of the city, where traffic is quite heavy. These streets were originally macadamized and, since the old macadam had been in place for many years, it was thought to be suitable for a base for the "bitulithic" pavement, which, accordingly, was laid directly upon it. This method of construction has not proved satisfactory, especially for streets with heavy traffic, and it has been discontinued. The city's specifications now require all pavement to be laid on a concrete base.

REPAIR WORK

Soon after the expiration of the contractor's guaranty the pavement began to show signs of wear and, in many places, small holes appeared; these quickly enlarged by raveling, becoming in some cases sufficiently large to cause serious inconvenience to traffic.

PATCHING—The first repair work undertaken by the city was in January, 1914; this consisted in cutting out the raveled places and patching the holes with new material. The work was done by a contractor who was then engaged in paving other streets in the city with sheet asphalt, which material was used for making the patches in the "bitulithic" pavement. The patches thus made were strong and durable, joining up smoothly with the adjacent surfaces. The appearance of the finished work, however, is not uniform; the patches are rather conspicuous, especially after rains.

The work was confined to the repair of worn places and depressions in the pavement and no attempt was made to treat the adjacent surface of old pavement. In making the patches the edges of cuts were trimmed smooth and vertical and all loose material was removed from the holes, care being taken to cut into the old macadam foundation as little as possible. The edges and bottom of the cut were then painted with hot liquid asphalt, and the hole was filled with asphalt paving mixture, heated to a temperature of about 255° F. The edges of the patch were then smoothed with a hot iron, tamped by hand, and the patch compacted with a steam roller. The appearance of typical cuts, ready for filling, is shown in Fig. 1. The loose stones in the bottom are part of the old macadam base; this was carefully tamped by hand before the cut was filled with new material.

COST DATA—Since the repairs were made in the form of isolated patches, scattered over a wide area, no satisfactory unit price for the completed work could be agreed upon in advance, and it was decided to have the contractor perform the work at actual cost for labor and material plus 15% for use of tools and plant. The city provided an inspector who accompanied the repair gang from

*Chief Engineer, Colorado Highway Department, Denver, Colo. The Colorado Highway Department has made headlines for the past few years by its work on the new highway system. The department has been successful in securing the necessary funds for the construction of the new highway system, and it has been successful in securing the necessary funds for the construction of the new highway system.

place to place and supervised the work. After the completion of repairs the total cost was determined, also the extent of work. From these data the following statement has been compiled:

Total area of patches made: 308.6 sq.yd.	
Material and labor	\$609.75
Cost of inspection	32.00
Total cost of repairs	\$641.75
Unit cost of work: \$2.08 per sq.yd.	

REPAIRS WITH ASPHALT "PANCAKES"—The foregoing repair work was completed in the latter part of January, and it was then thought that additional repairs to the pavement would not be necessary for a considerable while, since there were at that time no further signs of raveling. This condition did not continue long, however, for within a few weeks new holes began to appear and the surface of the pavement continued to deteriorate, assuming a deeply pitted appearance over practically the entire area. On College St., where the traffic is heavy trucking for wholesale houses, the pavement soon raveled badly and was

chased for the work was charged to cost of work. The steam roller was charged at the rate of \$10 per day for machine and roller man. The ready-mixed asphaltic paving material used was estimated as being worth 40c. per sq.yd. in finished patches. The following statement covers the cost of the work:

Total area of cuts filled: 422.14 sq.yd.	
Labor and tools	\$294.18
Patching material	168.86
Total	\$463.04
Unit cost for area repaired: \$1.10 per sq.yd.	

SURFACE TREATMENT

Soon after the completion of repair work in June it was decided to apply a flush coat of cold refined tar to the entire pavements under discussion. The object was to fill up the small pits and depressions in the surface of the old pavement and also to renew or replace, as far as practicable, the cementing material or bitumen that had escaped from the body of the old pavement; and

FIG. 1. CUTS IN 7-YEAR OLD "BITULITHIC" PAVEMENT ON OLD MACADAM FOUNDATION; READY FOR FILLING WITH ASPHALT MIXTURE

FIG. 2. NORTH COLLEGE ST., SHOWING CONDITION OF A 7-YEAR OLD "BITULITHIC" PAVEMENT ON OLD MACADAM FOUNDATION; BEFORE PATCHING

worn into holes in many places. This condition is shown in Fig. 2, which is from a photograph of a portion of College St., taken in May, 1914.

In June, it was decided to make the additional repairs that were then necessary, and a repair gang was organized from the city street department. This gang included a foreman, four laborers, a driver with a one-horse wagon. The patching material was obtained from "pancakes" or slabs of ready-mixed sheet asphalt, which had been made up for this purpose during former paving operations in the city.* These "pancakes" had been stored under cover and were in good condition for use upon being heated to the proper temperature. The city's 10-ton steam roller was used for compacting the patches after the cuts were filled and the edges had been tamped down by hand and bonded to the adjacent pavement with a hot smoothing tool. It was found that the three-wheel roller, used under these conditions, did very good work, making a smooth and compact surface.

COST DATA—The total area patched in June was 422.14 sq.yd. as compared with 308.6 sq.yd. in the first work described. The regular tools and equipment of the city street department were used as far as practicable, and such additional equipment as was pur-

to prevent, for a while at least, further raveling or disintegration of the pavement.

MATERIALS AND METHODS OF WORK—The pavement was first gone over with the city street-sweeping machines; usually on the night before repair work was commenced. Later, a suitable area was roped off from traffic and the surface was swept by hand immediately before applying the refined tar. The working force comprised a foreman, six laborers and a driver with a one-horse wagon. Sand was delivered at convenient places by contractors at a fixed unit price. The wagon was used to haul and distribute the other materials as needed. The refined tar was brought to the job in barrels; from these it was pumped into buckets and spread by hand over the pavement.

The tar was then swept along by laborers, using wire push brooms, and distributed so that every portion of the pavement surface was covered. The tar was sufficiently thin to penetrate readily into the pavement. A sufficient quantity of the tar was poured over the surface to allow the pavement to absorb it to saturation; the surplus tar found its way to the gutters, from whence it was later taken up for further use. The tar was forced into the pavement by the sweepers as much as possible, the object being to make it serve both as a filler and a seal coat for the pavement.

*A more detailed account of this method of making repairs will appear in a subsequent issue.

After application, the treated surface was allowed to remain undisturbed for from one to three hours; it was then covered with coarse sand to a depth of about $\frac{1}{4}$ in. The street was then opened to traffic.

COST DATA. A careful account was kept of every item of expense entering into the work; from this the following statement of cost has been compiled:

Total area of pavement covered by surface treatment:	
17,417 sq. yd.	
20 cu. yd. of sand at 41.06	\$212.00
Label on hauling team	240.65
Tar purchased for the job	20.00
147 gal. of refined tar at 10.42	362.25
Total	\$834.93
Unit cost of work, 2.96¢ per sq. yd.	

CONCLUSIONS

A comparison of unit costs for the two jobs of patching shows a much lower rate for the work done by the street department, using ready-mixed paving material. As a result of the experience herein described, it is probable that the city will adopt this method for future repair work. If bituminous paving material, prepared for use, can be obtained at a reasonable price, there is no necessity for a city to purchase and maintain an expensive asphalt plant for ordinary repair work; in such cases repairs can be cheaply and effectively made with a comparatively small outfit.

The surface treatment of the old pavement after the completion of repairs was in the nature of an experiment, it being the first work of the kind attempted in this city. Considering the low unit cost of the work, less than 3¢ per sq. yd. of pavement covered, the results obtained are quite satisfactory.

In addition to the operation of flush coating, and while this was in progress, some shallow patches were made without cutting the old pavement. This was done by filling the depressions with finely crushed stone coated with the surfacing material and tamped with hand tampers until the patch was thoroughly compacted and bonded to the old pavement.

Experience has shown that more sand was used in the work than was necessary for the best results. The sand, after being spread, was allowed to remain in place for a week or more, and while a considerable portion was taken up by the tar, much of it was washed by rains into the gutters, from whence it was later removed by the street-cleaning department. About one-half the quantity of sand used would have been sufficient for the purpose.

The bituminous coating went much further and covered more area than was expected. One gallon of the refined tar covered a fraction over 8 sq. yd. even after being allowed to soak freely into the old pavement. The penetration was good as was shown by cutting into the surface at several places after the tar application. It was found that the tar, in most cases, penetrated as far as 1 in. below the surface.

Another feature of the work was the springy, elastic nature of the surface of the pavement after treatment. This was a matter of great moment by citizens, many of whom were concerned about the work in its early stages. It was found that the pavement was treated for the purpose of treatment it is not expected, however, that the same work will be prevented for any length of time. Such concentration would be too great, except from a careful application of a cold

On the whole, the results obtained from this experimental work are considered quite satisfactory, and it is thought that the work done has been efficient and economical and well worth the cost.

✕

A Snow-Removal Plan for New York City*

In past years the city depended upon trucks alone to haul snow from streets to waterfront dumps, the work starting as a rule after the storm was over and traffic retarded or completely blocked. No other method was considered available, and the speed of clearing snow from streets thus depended upon the supply of trucks for snow work. The maximum number of vehicles which could be procured last winter was 3000, and each truck averaged 50 cu. yd. per day. Under these conditions 150,000 cu. yd. of snow was the maximum amount per day that could be removed from roadways. With the 38-in. snowfall in February and March of this year, it required over 10 days to clear snow from the 1914 scheduled area of 20,000,000 sq. yd.

The only additional method of accelerating the removal of snow, up to last winter, was by decreasing the length of haul for trucks through the use of main trunk sewers for snow disposal, and only a limited number of such sewers was allowed in the Borough of Manhattan.

As a result of last winter's experience and tests it appears that the city has had available for years past a possible solution of the problem of rapid snow removal through the extensive use of sewers, not alone after a snowfall, but during the progress of the storm. It was also learned that snow work should be started with the storm, clean snow dumped into sewers as it falls, and the attempt made to keep pace with the storm, instead of trying to dig the city out after the block has occurred.

It should be recognized that these discoveries regarding snow work must be tested by a winter's experience, but whatever is done next winter in the disposal of snow through sewers must be considered as a decided addition to past months, which likewise will be continued in operation.

THE 1914-1915 SNOW-FIGHTING CAMPAIGN

Based upon the data concerning snowfalls, it is planned to utilize all sewers having a sufficient flow of water to transport snow and by means of regular sweepers acting as squad foremen, to assign emergency laborers in sufficient number to place in manholes snow falling at the rate of $\frac{1}{2}$ in. per hr. The number of emergency men required for this purpose will approximate 15,000 per shift of eight hours.

In addition to pushing snow into sewer manholes on scheduled streets where sewers are available for snow disposal, the snow-fighting force will remove snow from intersections of paved non-scheduled streets, placing it in sewers where such can be used, or else piling it. It is also part of the plan to assign the snow-fighting force to clean the roadway at nearside street car stops.

Last year's experience in disposing of 800,000 cu. yd.

*From a report by J. T. Featherston, Commissioner of Street Cleaning, New York City, to the Board of Estimate and Apportionment on Final Plans for Snow Work, Winter of 1914-15. The report was dated Nov. 10, 1914. It was submitted, in part, for the purpose of securing the approval by the board of certain elements of the plan. This approval has already been given. Some statements from the report were published in our issue of Nov. 24, 1914, p. 1095.

of snow in large sewers demonstrated the economy of this method, the cost being approximately 15c. per cu.yd. Special tests in the various boroughs, together with scientific observations conducted by the Sewer Bureau of the Borough of Manhattan,* verified the general conclusion that all sewers having a sufficient flow of water can be utilized for the disposal of *clean* snow without injury to the sewers. On streets where sewers are unable to carry off the snow, the roadway will be cleared and the snow piled for removal by carts or trucks.

For the purpose of showing the advantage of snow-fighting work over contract removal, a tentative estimate of the time required to clear the scheduled area in the three boroughs and the cost thereof is presented herewith.

Assume snow falling at the rate of $\frac{1}{2}$ in. per hr., the storm continuing for 14 hours:

Item	Snow Fighting Force	Contract Work
Estimated time required to complete work after storm ceases	4 hours	168 hours
Estimated cost per million square yards cleared	\$5,160	\$22,438
Estimated total cost of clearing scheduled area	109,200	448,760

This estimate, as well as all plans for snow fighting, is based on the following assumptions:

- (1) That a sufficient force of emergency labor can be started at work, day or night, within four hours after a continuing snowfall begins.
- (2) That a rate of pay sufficient to attract labor and make the men anxious to work can be offered by the city.
- (3) That the weather conditions will not be so extreme as to prevent men from working during the storm.
- (4) That a sufficient amount of normal sewage is flowing in the bulk of the sewers to transport snow to the rivers and harbor.
- (5) That the ordinary flow of sewage can be supplemented by water from hydrants where the normal flow is insufficient to transport the snow.

As the snow-fighting method involves a new departure in snow removal, every effort has been made to plan the work so as to meet anticipated conditions. This has involved a tremendous amount of detail study and observation of factors heretofore unknown.

To meet the various requirements of the snow-fighting problem, the following work has been completed.

1. **SURVEY OF SEWERS**—The depth of sewage and quantity of sediment in 50,000 sewer manholes and the velocity of sewage in 1098 miles of sewers, in the boroughs of Manhattan, the Bronx and Brooklyn, have been determined and the information plotted on maps.

2. **WEATHER CONDITIONS**—Meteorological information regarding the duration, rate and fall, and depth of snowstorms has been studied and all published figures concerning snowfalls and their prediction by observation of the barometer, wet- and dry-bulb thermometer, direction and force of wind, cloud formation, etc., are available and will be used in conjunction with the weather reports from the United States Weather Bureau.

3. **LABOR CONDITIONS**—A general examination has been made of the available supply of labor and plans for quickly filling the quota required on snow fighting have been prepared. Registration of snow fighters at the various section houses and stables will be started about Nov. 15, 1914. All printing and forms for this purpose have been ordered.

4. **ASSIGNMENTS**—After the registration begins, notification cards will be sent to all men on the list, giving

their assignments and information as to time for reporting and location of stations. Each individual or gang will have a set task to accomplish within a specified time.

5. **"THE CALL TO WORK"**—Should a snowstorm start during the day, the street-cleaning force will be available, and emergency laborers with notification cards will have instructions to report without special notice. If, however, a storm starts during the night, it will be necessary to call all men. It is proposed that the police shall cooperate with this Department, so that when notice is given by the Commissioner to Police Headquarters, all patrolmen will be reached by telephone as soon as possible and will call out the regular employees of the Department, as well as the emergency men. A list of all employees and registered laborers will be furnished for each patrolman's beat in the three boroughs, and in this way it should be possible to get a large number of men into service on short notice. In addition to the notification by the Police Force, the night workers in each Department stable will be utilized for calling men to work.

6. **EQUIPMENT**—The principal tool used on snow fighting will be the sweeper's pan scraper, supplemented by road scrapers, scoops, plows, picks, etc., all standard Department equipment. It is likewise proposed to increase the snow-carrying capacity of sewers by using bags as temporary dams where necessary to increase the depth of water in the manholes.

7. **UNSCHEDULED STREETS**—On streets where removal is not deemed essential, snow plows attached to automobiles and horse-drawn plows will be used for opening roadways for traffic. Street intersections with near-side cars will be cleared while the storm is in progress.

ORGANIZATION AND MANAGEMENT OF THE SNOW-FIGHTING FORCE

ORGANIZATION—Three divisions will be organized for snow fighting: (1) The first line of attack will comprise regular Department employees, supplemented by emergency laborers. The unit of organization will be based upon the sweeper as leader of a squad of emergency laborers, working under the direction of regular department officers.

(2) The first reserve will consist of regular drivers with horses and carts, drafted for a night shift, to clear streets where the snow-fighting force cannot use the sewers.

(3) The second reserve will consist of private trucks for day and night service, used as a supplementary force when the two regular forces have been unable to cope with the storm. This reserve force will be covered by the registration of private vehicles and assigned as may be necessary according to the requirements of the situation.

MANAGEMENT—Definite printed instructions have been drafted to cover all phases of the work, and classes have been started for the officers of the Department. Drills of regular employees will be held after Nov. 15, and night or day calls will be tried to prove their effectiveness.

Hell Gate Arch Bridge Not a New Thing—The following is a curious allusion to the 277½-ft. steel arch which the New York Connecting R.R. is now building across Hell Gate, East River, New York:

Never perhaps since our first Bridge-Builders, Sin and Death, built that stupendous Arch from Hell-gate to the Earth, did any Pontifex, or Pontiff, undertake such a task.

It is taken from Carlyle's "Sartor Resartus," Book I, Chapter XI. The "pontifex" of the present Hell Gate arch is Gustav Lindenthal.

Field and Office

Portable Hoist Towers for Concreting*

Portable hoist towers for conveying and placing concrete are gaining in favor with contractors. Very often it is easier to employ a movable tower than to erect a high stationary structure.

An interesting application of this method on retaining-wall construction is described below. A second case is given where the mixer and the tower are both portable, mounted on standard flat-cars, and moved about a large area, with excellent results.

STATIONARY MIXER AND MOVING HOIST TOWER

A hoist tower mounted on trucks is used to convey concrete from mixer to construction in the four-tracking work of the New York Central & Hudson River R.R., now under way at Poughkeepsie, N. Y. This work includes the building of several retaining walls, one of which is shown in the making, with the portable tower at work, in the accompanying views, Figs. 1 and 2.

The wall is of the standard gravity type. It is about 20 ft. high at the northern end, 10 ft. wide at the base,

and 21 in. at the top with a 2-ft. coping. The lower end is 6 ft. high, with other dimensions corresponding.

In building the lower portion of the wall wheelbarrows were used instead of the tower. By this method 20 men placed 10 cu. yd. of concrete per day. After 13 days a movable hoist tower was brought on the job from a wall near-by which had been built with the tower, and the 20 men then handled 125 cu. yd. daily.

This portable hoist tower is mounted on four wheels, which run along at the base of the wall on a standard-gage track. The tower is 34 ft. high and is equipped with a $\frac{1}{2}$ -cu. yd. bucket which can be tipped at any elevation desired. The general layout of the work is shown in Fig. 2.

Fig. 3 shows the rigging of the tower. A cable runs from a drum of the two-drum hoisting engine to a pulley on the car, thence over two pulleys at the top of the structure, down to a pulley on the bucket and up to a fixed point on the top of the tower. The car is moved forward by means of a cable from the second drum to a deadman at the farther end of the track and back to the front of the car, as shown in the diagram. To return the tower to the mixer, the bucket is blocked and the hoisting drum of the engine operated.

A depression in the track at the mixer allows the bucket to be lowered below the level of the chute from the

*The following articles on hoist towers have appeared in *Engineering News-Record* of recent date: "Steel-Concreting Tower Designed for Rapid Erection," Sept. 24, 1914, p. 649; "Concrete-Placing Plant with Telescopic Towers," Nov. 12, 1914, p. 834; "A Self-Propelled Telescopic Hoist Tower," Nov. 12, p. 885.

FIG. 2. PORTABLE TOWER AT PoughKEEPSIE, BUCKET IN DUMPING POSITION

mixer, so that the concrete may be discharged into the bucket by gravity.

The work is being done for the New York Central & Hudson River R.R., under the direction of G. W. Kittredge, Chief Engineer; J. W. Pfau, Engineer of Construction; R. E. Dougherty, District Engineer, Eastern District, by Richard & Gaston, contractors, New York City (W. McKee, Superintendent on the job).

FIG. 3. RIGGING OF PoughKEEPSIE CONCRETING TOWER

MIXER AND HOIST TOWER ON FLAT-CARS

At the Jersey City terminal of the Central R.R. of New Jersey, a portable mixing and distributing plant was desirable on account of the large area over which the work was distributed, the small amount of concrete placed in any one location and the difficult conditions imposed by sustained traffic. The work of handling materials, mixing and hoisting to roof were all done on two existing standard-gage tracks, 13 ft. c. to c., immediately adjacent to the work. The concreting materials were brought in on cars directly to the $3\frac{1}{2}$ -cu.yd. mixer mounted on a standard 40-ft. flat-car and which was fitted with permanent runs, water-tight cement bins, and water connections.

After mixing, the concrete was dumped directly into the hoist bucket which was permanently located with tower and hoisting engine on a standard 50-ft. flat-car, with permanent sway braces, guides, etc. The tower was 82 ft. high, and near the top was equipped with an ordinary receiving hopper, which discharged into three Insley steel chutes, 30, 20 and 15 ft. long.

The chutes were supported at their hopper joints by rigging hung from two booms, 30 ft. and 32 ft. in length, respectively, which were attached to the side of the tower, well up toward the top. The whole rigging was sup-

FIG. 4. CONCRETING TRAINSHEED, JERSEY CENTRAL TERMINAL, WITH HOIST TOWER ON FLAT CAR

ported from the tower, with the exception of the discharging end, which was moved from place to place by two men. The booms were free to swing in any direction, and the plant discharged over a semicircular area having a radius of about 50 ft.

This mobile mixing plant allowed the concreting to proceed very rapidly; in fact, practically as a continuous operation. The plant was often moved 100 ft. or more during the noon half-hour. With this plant from 60 to 90 cu.yd. of concrete were placed in 31½-in. roof slabs, which were cut up with numerous skylight curbs, smoke ducts, etc., by about 30 men in an 8-hr. shift.

The work was done by R. P. and J. H. Staats, New York, under the direction of Joseph O. Osgood, Chief Engineer of the New Jersey Central; A. E. Owen, Principal Assistant Engineer. C. M. Titsworth was Assistant Engineer in Charge of Construction, for the railroad.

A Differential Gage for Very Small Pressure Differences

By WILLIAM KASBY, JR.*

A new type of differential gage, capable of accurately measuring small differences of pressure, is shown in the accompanying illustration. It differs in two respects from the usual gages in which a gage liquid heavier than the measured liquid is used. First, the tubes are so large in diameter that the troublesome irregularity of the meniscus so common in the small sizes of tube is confined entirely to

(more easily seen) which can be accurately set in the surface of the meniscus by bringing it tangent to its reflection. These hook-gages have a common vernier reading to 0.001 ft., attached by an arm to one of them and surrounding the graduated rod of the other. To set the vernier, the tubes are subjected to the same pressure. The ends of the hooks are then brought tangent to the menisci and the arm is moved until the zeros of the scale and of the vernier coincide. Colored carbon tetrachloride, to which benzine has been added to obtain the desired density, is used for the gage liquid.

It is essential for accuracy, particularly when the deflections are but a few thousandths, to rid the gage and connections of all air, which is most easily accomplished if they are placed lower than the source of pressure. Caution should also be used respecting the effect of heat. It was found that a lighted incandescent lamp held for a few minutes close to one side of the gage caused sufficient expansion of the carbon tetrachloride in the tube on that side to render observations almost worthless.

This instrument has been used successfully in the hydraulic laboratory of the Civil Engineering Department of the University of Pennsylvania, to investigate the distribution of velocities of approach in weir tanks, to study the critical velocities in pipes and for other experimental work. It can be adapted to a considerable range of pressure by varying the density of the gage liquid, but it is of greatest service in measuring very small differences of pressure.

Irrigation Flumes of Ingot Iron

Flumes made of ingot iron are being used on a number of irrigation projects in the Western states. The Cascade Irrigation District, Ellensburg, Wash., will have 25,000 lin ft. of metal flume, which is said to be the longest large flume of this kind in the United States; 7000 ft. of this were installed in 1913 and 9000 ft. (of No. 16

FIGURE 1.—DIFFERENTIAL GAGE FOR MEASURING VERY SMALL PRESSURE DIFFERENCES

The flumes mentioned here are made of ingot iron, and are of the type known as "flume" flumes. They are used for measuring the flow of water in irrigation projects. The flumes are made of ingot iron, and are of the type known as "flume" flumes. They are used for measuring the flow of water in irrigation projects.

gage) in 1914. This district will have also four concrete-lined tunnels aggregating $1\frac{1}{4}$ miles, $\frac{3}{4}$ mile of concrete-lined canal, and 30 miles of earth canal. This district has an area of 13,000 acres, to be supplied with water from the Yakima River, and the work is provided for by a bond issue of \$700,000. R. W. Rea is chief engineer; D. C. Henny, U. S. Reclamation Service, is consulting engineer.

The Tumalo Irrigation District, of Laidlaw, Ore., has an area of 22,000 acres under irrigation from the Deschutes River, and about 9000 ft. of metal flume have been installed. About \$450,000 of state funds have been expended on this project during the past two years. O. Laugaard is project engineer.

The metal flumes on the above works are of the Lennen type, made with semicircular sheets of the Armco ingot iron, and supplied by the Coast Culvert & Flume Co., of Portland, Ore., to which we are indebted for photographs and information. In the accompanying cut the upper view shows a long stretch of hillside flume. The portion built against the bluff has an inclined roof to throw off any debris falling upon it. This roof is shown more distinctly in the lower left-hand view. The lower right-hand view shows the connection of a concrete feed canal with an iron flume.

High-Head Centrifugal Pumps may be installed shortly in the Aspinwall pumping station of the Pittsburgh (Penn.) water-works. This station is one of two handling the filtered water from the city's filtration plant at Aspinwall, 5 mi. above the city. It pumps against 280 ft. head into the new Cabbage Hill reservoir, North Side, but will later handle part of the pumpage into the Highland reservoirs, the upper one of which gives a head of 375 ft. now handled by the Brilliant pumping station, on the opposite bank of the Allegheny. A two-stage centrifugal pump driven by a steam turbine is contemplated.

Outline of Data to Be Obtained for a Report on the Feasibility of Any Irrigation Project

By H. F. ROBINSON*

In preparing data for a report or in the consideration of a proposed irrigation project, either nonstorage or storage, even the most experienced engineer often inadvertently omits the discussion of some item that has a vital bearing on the success or failure of the project, or fails to look up in the field something that necessitates another trip or the omission of important matter. It was to put into suggestive form, especially for the engineer in the field, the principal things to be observed and investigated, and as a list of topics that might be followed in making up the report, that the following outline was arranged. Since it was first compiled, ten years or more ago, it has been tried out in the field and amended from time to time, as experience directed, until it is thought that most topics that may be needed have been included.

Copies of the list or outline have been made and supplied to the engineers of the U. S. Indian Irrigation Service and others, and it has proven of value in their work. It is now offered to other engineers in the hope that it may assist them in similar work:

OUTLINE OF REQUIRED DATA

NONSTORAGE SYSTEM

Physical features in general.
Altitude and climatic conditions.
Area that may be irrigated.
Nature of the land.
Rough or smooth.
Cost of clearing.
Cost of leveling.
Natural growths.
Value of natural growths.
Ownership of land.
Source of water-supply.
Quantity of water available.
Flow of stream by gaging.
Records of flow.
Rainfall.
Drainage area, its character and probable runoff.
Prior rights involved.
Is water adjudicated?
Quantity of water for this project.
Local laws and litigation.
Duty of water.
Nature of crops.
Length of irrigation season.
Soil.
Alkali.
Seepage and evaporation.
Amount of water needed for the land, or how much land may be covered with the water available.
Methods of using water.
Crop requirements.
Rotation.
Proposed methods of distribution.
Diversion works.
Physical conditions at the proposed heads.
Dam.
Kind.
Cost of materials.
Where obtained.
Necessity and kind of rock.
Other material that may be used, as timber for cribs, lumber that may be cut, sand, gravel, etc.
Carriers of freight.
Distance from railroad.
Cost of freightage.

Roads.
Existing, required and changes necessary.
Headgates, waste gates, etc.
Size and kind.
Gate lifts.
Canal.
Size, length, slopes, grades.
Nature of material excavated.
How excavated; teams, dredge or other methods.
Labor; kind, availability, cost.
Special or unusual structures.
Automatic spillways, flumes, culverts, sand traps, bridges, etc.
Laterals and structures.
Silt.
At normal flow.
During floods.
Nature of.
Drifting sand in water.
Possibility of increasing water-supply.
Return water from seepage.
Reservoirs.
Pumping underground water.
Cost of fuel.
Depth to ground water.
Other data relative to pumping.
Possibility of water power.
Its value and market.
Products.
Kind and market.
Condemnation and damages.
Rights-of-way.
Total cost of project.
Cost per acre of ground covered.
Basis of return on investment.
Method and period of repayment.
Sinking fund. Interest.
Maintenance.
Very brief comparison with other similar projects.

STORAGE SYSTEM

Physical features in general.
Altitude and climatic conditions.
Drainage area.
Streams and tributaries.
Flow by gaging.
Records of flow.
Rainfall.
Probable runoff of drainage area.
Vegetation in storage basin.
Timber and fuel adjacent to basin.
Prior rights to any of the flow.
Water adjudicated or not?
Amount for storage.
Silt and sediment.
Alkali and salt.
Reservoirs.

(A failure of any of the seven following requirements ruins the project.)
1—Sufficient supply.
2—Good basin.
3—Good dam site.
4—Good material.
5—Good foundation.
6—Sufficient good land.
7—Sound commercial basis.
Dam.
Kind proposed.
Nature and cost of material.
Where obtained.
Carrier and freight.
Nearness of rock supply, nature and quality.
Sand and gravel.
Other building material.
Temporary diversion of stream.
Permanent outlet of reservoir.
Spillway.
Amount of storage at varying dam heights.
Physical and chemical tests in general.
Power canals.
Horsepower available.
Power plants.
Transmission.
Use to be made of power.
Value of developed power.
Maintenance.
Roads.
Existing, now required, changes.

Underground water-supply in irrigated district.
Analyses of underground water.
Depth to water table.
Probable quantity for pumping.
Pumps and pumping.
Cost.
Present and probable future cost.
Existing appropriations of water and rights.
Existing and proposed methods of distribution.
(If none, under nonstorage supply.)
Local laws and litigation.
Water rights.
Existing and proposed.
Attached to land?
Methods of using water.
Duty of water in locality.
Length of irrigation season.
Crop requirements.
Rotation.
Seepage and evaporation.
Losses in distribution.
Return flow from irrigated areas.
Depth to water table.
Soils.
Products.
Markets.
Rights-of-way.
Condemnation and damage.
Total costs.
Cost per acre-foot of water stored.
Cost per acre-foot of water supplied.
Cost of pumping.
Area of land supplied.
Cost per acre watered.
Cost per acre-foot per foot of lift.
Basis of returns on investment.
Methods and periods of repayment.
Sinking fund. Interest.
Maintenance.
Relations of the users of water to the government, including contract for water (in case the project is a government project).
Very brief comparison with other similar projects.

*Superintendent of Irrigation, in charge of all irrigation work for the Indian Service in Northern Arizona, New Mexico and Colorado; Albuquerque, N. M.

Small Caterpillar Tractors for Miscellaneous Hauling

The accompanying illustrations show a type of gasoline tractor being used in the Far West for a variety of hauling purposes. While not very rapid (about 1 m. p. h.), these tractors are efficient and economical for hauling on roads and across country where no other kind of motive power, except perhaps several teams of

FIG. 1. SMALL CATERPILLAR GASOLINE-ENGINE DRIVEN TRACTOR USED IN THE WEST

oxen, could make any headway. They are used for drawing cultivating and other agricultural implements, for lumbering, freighting, and have proved of special value in engineering construction work.

For road building they are used to haul scatters, plows, scrapers, and grading machines, as well as material wagons. As stationary power plants they can be used for pumping, running concrete mixers, etc. For irrigation, ditching and levee building their ability to get over rough ground and soft, like new embankments, is a great advantage. They will climb up a levee slope or ride down into an irrigation ditch without the least difficulty. The tiller wheel operates on the same principle as the ball-bearing caster of a piece of furniture, and will turn the tractor around almost within its own length.

FIG. 2. SMALL CATERPILLAR TRACTOR HAULING A LOAD OF 7 TONS OF DREDGE BUCKETS UP A 16% GRADE

The tractor shown in the illustration is a ball-bearing type, with a hopper-like body, a large rear wheel, and a smaller front wheel. The track frames are supported by a series of compression springs, and the tiller wheel is mounted on the main frame. The tractor is shown in profile, facing right, and is pulling a large, heavy-duty wheeled trailer up a steep, muddy embankment.

tread. All the weight borne by the treads is carried on a double row of large balls of chilled cast iron between each tread and its frame. The track links are of manganese steel. Two sizes of these tractors are made with pulls of 12 and 18 hp., respectively, and of 20 and 25 hp., as stationary power units. These tractors are made by Yuba Construction Co., of Marysville, Calif.

Some of the History of Steel Tapes

A correspondent has asked, "When were steel tapes introduced into surveying work?" This question is not so easily answered as it looks. Letters addressed to the leading instrument manufacturers brought indefinite replies in all except two or three instances.

Theodore Huse, Vice-President and Treasurer of the Lufkin Rule Co., wrote:

We have no definite or authentic information on this subject, except that the first steel tapes were made in England and the first ones in the United States by the George M. Eddy Co., Brooklyn, N. Y.

The George M. Eddy Co. informs us that steel tapes were introduced in this country by Col. W. H. Paine about 1870. The use of a home-made steel tape during the same year is described by L. A. Nichols, President of the Chicago Steel Tape Co., in the following answer to our query:

Steel tapes have been used for surveying purposes for probably 100 years. At first these tapes may have been of a nature to make questionable their title of steel tapes; they were measures on more or less narrow, thin pieces of iron, and were used where particular care was required in certain measurements, and preceded the advent of what is known as Gunter's chain.

So far as the writer's knowledge goes, a real steel tape, that is a tape made of steel instead of iron, and of a length which made it really a tape, and graduated at different points, was in use in America prior to the Civil War. It may have been in use for certain purposes a number of years before that date. By the writer's personal knowledge, the first use of a tape in this country occurred in 1870, when some hoopskirt wire was marked off for measuring bridge spans.

The graduation or marking at first was merely scratched on the steel. As this became easily obliterated, the engineer in charge had solder run on the two ends, and marks made on this solder. Shortly afterward, and within the year 1870, an engineer, a Mr. Wheeler, of Worcester, Mass., obtained some of the hoopskirt steel rolled at the Waahburn-Moen

works in Worcester, put on a drop of solder at each foot and marked the graduations on this solder, the tape being 100 ft. long.

The experience with this tape was so satisfactory that Mr. Wheeler had several made, and the writer, who was in Mr. Wheeler's party at the time and succeeded him shortly afterward, followed his example and made several more tapes, in a rule way marking the graduations on solder run on the steel.

These, so far as the writer's knowledge goes, were the

first steel tapes ever made with graduations marked on solder or babbitt metal run on the steel. Since then the writer has used these tapes generally, in preference to chains, in his work; and from comments received from other engineers he felt convinced that it was a worthy article of commerce, and in 1900 advertised to make this kind of tape, although as early as the '80s he had made several extra ones and sold them to associates. In 1900 the name, "Chicago steel tape," was adopted for that kind of a tape.

Prior to this, however, if the word steel could be considered in the light of any preparation of iron or bronze, the writer believes he has read in a translation of some foreign work, that a standard of measure made of metal was used in the construction of the Roman aqueducts.

Our own research shows that the first English patent for the manufacture of surveyors' tapes was granted in 1842 to James Chesterman and John Bottom, of Sheffield, County of York. This was for a tape partly or wholly formed of metal. The patent specifications read:

ting off the expansion. The tape was defined as a "jointless metal strip." This shows that the tape itself was neither new nor novel in America in 1860.

✱

A Drill Boat Which Lifts Itself Clear of the Water

In the harbor of Port Weller, the Ontario entrance of the new Welland Ship Canal, there is now in operation a drill or sounding scow which has the unique ability of lifting itself clear of the water on its own spuds. The two views herewith show the method of operation of the scow. It is about 40 ft. square, of catamaran type, carrying a deck on which is an engine and upon which may be placed an ordinary field drilling machine, such as the one shown

DRILL BOAT WHICH LIFTS ITSELF CLEAR OF THE WATER

This may be done by means of thin plates of metal or woven metallic fabrics, or by the introduction of fine wires or an open woven metallic fabric in the manufacture of the tape. We prefer, however, introducing fine wires of silver or copper.

This is interesting because it proves that the manufacture and introduction of the well known metallic tape were coincident with the tape made of Sheffield steel. Subsequently, in 1847, James Chesterman was granted a second patent which fully covered the manufacture of steel tapes.

At first these were made of ribbons of steel joined together, and some were plated with copper or tin with engraved graduations. Later it was possible to roll the entire length in one ribbon.

The second patent also covered the machinery for making metal ribbon and metallic tapes, so that for many years Chesterman had a monopoly of the business in Great Britain. For many years, also, Chesterman tapes were used throughout the world. The firm still exists and is still turning out tapes, with which most surveyors are familiar, by name at least.

The only American patent granted previous to 1870 for a metal ribbon tape was in 1860, for a combination of a metal tape and a scale or gage for indicating or set-

ting in the views. The scow was built for the general purposes of the survey staff of the new canal in connection with the harbor work, but principally to ascertain the elevation of the surface of the rock beneath the overlying material. As it was liable to be caught in rough weather, particularly as the harbor is a new one being built between breakwaters on an exposed shore, a steady platform was required. The engineer in charge first considered using one of the walking stages which were described in *ENGINEERING NEWS*, Nov. 2, 1911, p. 523, but the present design was found more practicable and cheaper.

The scow is framed to slide at each corner through a very heavy spud which carries two sheaves at its top. Over these sheaves passes wire cable from the outer part of the scow to individual engines, one just inboard of each spud. Normally the scow floats as shown in the left view, or is held at anchor in the normal fashion of dredges, but when a more rigid platform is required or when storms approach, the engines are individually started and the scow is lifted up to the position shown in the right view. The engineer in charge of the Welland Canal and responsible for the construction of the scow is J. L. Weller.

Editorials

The Lavis Subway Articles

In this issue is concluded Mr. Lavis' notable series of articles describing the extensions of the New York subway system—the greatest engineering work now in progress in the world. We feel sure that many of the readers who have followed these pages for the past twelve weeks will be interested to know that the series is to be republished in book form, where it will be more readily available for reference than in the pages of *ENGINEERING NEWS*. The work which it describes is only about half done, but practically all of the design and the more difficult elements of construction are of the past, so the present text is adequate as a complete exposition of the subject. One further item—the design and construction of the steel elevated structures—will be taken up in a separate article in *ENGINEERING NEWS* at an early date.

✕

British Sewage-Works Standards

Hard-and-fast standards for the effluent from sewage-treatment works have been the desire and aim of a certain class of sanitary reformers since sewage treatment began. Two years ago, the British Royal Commission on Sewage Disposal, in its Eighth Report, recommended a general standard with variations up or down, according to local conditions. This was a marked advance, but in the opinion of a committee of well known sewage-works authorities, printed nearly in full elsewhere in this issue, the Royal Commission went too far, in that it recommended any sort of a Parliamentary standard.

Instead of a Parliamentary standard, or even a standard set and subject to modification by a central authority, the Committee holds that since "no two cases are precisely similar," a central authority should have power to say what sort of an effluent "any sewage works ought to produce." The object should not be to secure uniform effluents but "to improve or conserve the conditions of the rivers"—quite another matter.

Of course, the Committee believes that all this means a strong central authority, with technical knowledge and with full power to control the character of the effluent from any and all works, and with no overlapping jurisdiction with any other central authority. With this, as well as the other main conclusion of the report, American engineers and sanitary chemists will agree.

✕

Contests in Engineering Society Elections

Most elections in engineering societies, carried on by letter ballot, are tame affairs, as the ticket selected by the official Nominating Committee is voted on without opposition and the result is a foregone conclusion. Occasionally it happens, however, that some candidate named by the official committee will displease a certain proportion of the membership, an independent committee will

be organized and another candidate named in opposition. This happened in the recent annual election in the American Society of Mechanical Engineers, and has happened again in the election of the American Society of Civil Engineers, in which balloting is now in progress.

This last contest deserves attention in these columns because of the unusual grounds on which the opposition to the regular candidate is based. The regular candidate, F. A. Molitor, of New York City, is admitted to be an engineer of high standing in the profession and of high ethical standards, interested deeply in the welfare of the profession and of the Society, and in every way competent to fill the position in question. Those who oppose Mr. Molitor base their opposition on the fact that he wrote a letter, published in *ENGINEERING NEWS* of May 8, 1913, in which he criticized the conduct of the Society's affairs, and enumerated various directions in which, in his opinion, the conduct of the Society could be altered to the advantage of the membership. Mr. Molitor has promptly replied to the circular sent out by those opposing him, stating that he stands by the letter which was published in *ENGINEERING NEWS*, and if elected to the Board of Direction, will use his influence toward carrying out the changes he has indicated.

So far, the issue would seem to be clear cut, so that the members can vote understandingly, according to their opinions.

It may be worth while to say a word here as to the opinion, which is undoubtedly honestly held by some, that it is not proper for a member of an engineering society to discuss the society's affairs in the columns of a technical journal. This opinion is based, doubtless, on the idea that a technical society is like a family or a social club, whose internal affairs are the business of its own members and of nobody else.

But a great national engineering society is an entirely different sort of organization from a social club of limited membership. The affairs of the American Society of Civil Engineers are of importance and interest, not alone to the thousands of its own members, but to the profession as a whole. Honest and intelligent criticism is a good thing for any organization; and as a matter of fact, the affairs of the national engineering societies have been a frequent subject for discussion in the technical journals ever since the societies were organized and the technical journals were founded.

There is, in fact, no other means by which general critical discussion of the Society's affairs can be freely carried on, since the official publications of the Society are necessarily under such restrictions that they could not give place to such criticisms save in publishing proceedings of the meetings.

It may be said, perhaps, that the place for such criticisms is at the meetings which the Society holds. These meetings, however, for the transaction of general business, occur at long intervals, not more than once or twice a year. The number of members who do or who can attend these

meetings is still not a tenth or a twentieth of the Society's membership. As a practical matter, therefore, the only means by which a general discussion of the affairs of the Society can take place with free and candid criticism is in the columns of the technical journals.

We recall the instances in which the free discussion in the technical journals of the affairs of other engineering societies spurred the American Society of Civil Engineers has prevented such societies from adopting unwise policies, and on the other hand, has greatly aided such societies in their development. Under these conditions, it is difficult to see how any sound indictment for disloyalty can be maintained against an engineer because he discusses in the columns of an engineering journal the affairs of the society to which he belongs.

8

A Derailment Easy to Explain

The Interstate Commerce Commission has just issued an official report on its investigation of a derailment on the Kansas City Southern Ry. on Oct. 19 last. In this accident the locomotive of a passenger train, running at 15 miles an hour was derailed, overturned and went down 65 bars, causing the death of the engineman.

The track on which this derailment occurred was in such bad condition that at some places the gage at the rail joints was 1 ft. 8 in., while at the center of the rail it was 1 ft. 9 1/2 in. Fifty angle bars were found in a short distance having only one or two bolts in them, while some of the rails had no bolt holes drilled in the webs. Twenty-five angle bars were found within a mile which were broken or badly sheared, and in some cases there were cracks between rail ends as great as 2 in. The rail spiking was so poor that many spikes were loose, some of them extending an inch away from the base of the rail; and in several places two spikes out of seventeen on the inside of the rail were missing.

The division engineer in charge stated that the appropriation for the maintenance-of-way department was spent in picking up the weakest points in order to keep the traffic moving, but was barely sufficient to do this, the condition of the track being substantially the same at the time of the derailment as it had been the year previous, although ten or a dozen derailments had occurred during the year.

There can be no doubt whatever that such a railway track as is described and illustrated in the commission's report is unfit to run trains over. The plea may possibly be made that the railway which allows its track to get in such a condition is forced to do so by lack of funds to properly maintain its road.

This defense, however, will not bear analysis. The wear and tear of rolling stock is great, because of the track, with the loss in accidents that result from the use of the increased expense of moving the same to the place of repair; slow speed, all combine to make the cost of running over a track of this sort the worst example of extravagance instead of economy.

If it is so, why is it in such financial condition that it is unable to properly maintain its track in reasonably safe condition? The answer should put squarely before the states of the interstate commerce their statement that they should be held responsible for the responsibility for the operation of the railways, and that they are permitted to charge the operating companies with the responsibility for the operation of the railways, and to permit the operating companies to charge the states with the responsibility for the operation of the railways. On the other hand, if a railway

company diverts funds that should be applied to track maintenance in order to engage in outside operations or pay unearned dividends, then the state authorities having the power to do so should compel necessary repairs to be made as a condition to continuance of operation.

9

The Importance of the Local Engineering Society

At a recent meeting of the Seattle Association of Members of the American Society of Civil Engineers, a resolution was adopted requesting each technical society in the city to appoint representatives to form a joint committee which should plan for cooperation between the different societies. We recently reported a similar movement in Philadelphia, where the Engineers' Club is taking the lead toward the organization of a federation of all the technical societies of Philadelphia with the Engineers' Club as a nucleus. These movements are typical of the progress being made in a number of different cities toward the strengthening of the local engineering society.

In an address on Dec. 17, at the annual dinner of the Engineers' Club of Youngstown, Ohio, F. E. Schmitt, of the editorial staff of ENGINEERING NEWS, emphasized the importance of the local engineering society to the engineer and to the community. There is no doubt that the enormous growth of the national engineering societies during the last quarter century has to a certain extent operated to reduce the importance and the strength of the local engineers' clubs. It is true that the national societies have the power to do for their members and for the profession many things that would be impossible for the local society. It is equally true, however, that a local engineering society, properly organized and supported, can yield benefits to its members and to the public which are impossible for the national society.

One of the greatest benefits yielded by an engineering organization is the promotion of mutual acquaintance and friendship among the men engaged in similar work. This was a comparatively easy accomplishment a quarter of a century ago, when the profession was small and the field of work which it covered was limited. At that time it was possible for a member of one of the national societies of engineers to be personally acquainted with a considerable proportion of his fellow members. Under present conditions this is no longer possible. The average member of one of the great national societies probably attends one of its general meetings not oftener than once in four or five years, and probably finds then that he knows only a handful of those present. We are speaking now, of course, of the average member and not of the men in the higher ranks of the profession who by frequent travel are brought in touch with fellow members in the profession over a wide range of territory.

In a local engineering society, on the other hand, holding fortnightly or monthly meetings throughout the season, with opportunities for social intercourse as well as technical discussion, it is easily possible for an engineer to become personally acquainted with most of the engineers in his own locality and not only with those working in his own immediate specialty, but with engineers in all branches of the profession.

The governing bodies of the national engineering societies have come to realize during the last few years, that if their societies would become truly national organiza-

tions, they must establish local branches in the principal cities where their members can meet each other. Simultaneously with the organization of these local chapters or sections of the national societies in different cities, however, the members conducting them have realized that it was far better to merge these organizations in a single strong, local engineering society rather than attempt to keep alive three or four weak, struggling sections of the national societies, able to hold only infrequent meetings and with small attendance and interest.

In the city of Buffalo, for example, there has long been a small engineering society, made up chiefly of civil engineers and holding very infrequent meetings, so that the organization has, we believe, become little more than a name. A year or two ago, officers of the American Society of Mechanical Engineers visited Buffalo and brought together the resident members of that society for the organization of a local section. The Buffalo members in charge of the movement, however, shortly perceived that in order to form a vigorous, useful organization, its membership should not be confined to those already belonging to the American Society of Mechanical Engineers, but all members of the engineering profession should be invited to

join. The name of the organization, therefore, was changed to the Buffalo Engineering Society and a strong influential society has been developed there.

There are two cogent reasons why the engineering profession needs strong engineering societies in each important city as well as the national engineering organizations. The first is that the local engineering society can often accomplish more for the profession in keeping its work before the public than can the national societies. The second is that the public is more and more looking to influential organizations of engineers for guidance on important public questions; and a strong local engineering society, officered by men of ability and good judgment, can deal with public engineering questions in a city or county or state that could not possibly be handled effectively by a national engineering society.

We would by no means be understood as doubting in any way the importance of the national engineering societies or undervaluing the service they have rendered and can render to the profession. What we wish to emphasize is that the local engineering society, well supported and properly organized, has a far larger field of opportunity and usefulness than has been generally realized.

Letters to the Editor

Engineering Societies and the Coast and Geodetic Survey

Sir—I have noted with interest and pleasure your editorial of Dec. 17, concerning our effort to get proper support for the Coast and Geodetic Survey. I am particularly grateful for your suggestion that the engineering societies might well come to our assistance. I earnestly hope this suggestion may be adopted. The Coast and Geodetic Survey is an organization which merits the approval and support of all engineers and just at present it needs that support urgently. If the societies would report their action to the Chairman of the Committee on Appropriations, House of Representatives, I am sure that the information thus sent him would be appreciated.

WILLIAM C. REDFIELD,

Secretary, Department of Commerce.

Washington, D. C., Dec. 19, 1914.

[We suggest that any engineering society desiring to investigate this matter with a view to action address a request to the Department of Commerce for a copy of Secretary Redfield's annual report, and if fuller information is desired, address O. H. Tittman, Superintendent of the Survey, Washington, D. C.—EDITOR.]

Cycles of Rainfall and the New Bedford Records

Sir—In September, 1913, the writer published an article in the Stone & Webster *Public Service Journal* entitled "Cycles of Rainfall." It is thought that this may prove of interest in connection with N. H. Goodnough's article on "A Century Rainfall Record at New Bedford,

Mass.," published in *ENGINEERING NEWS* for Nov. 19, 1914.

In the article on "Cycles of Rainfall" attention was called to several very general methods of analyzing precipitation data, all of which gave somewhat different conclusions and impressions. By chance the New Bedford records up to 1906 were included in that discussion, although the records for the subsequent years, as given by Mr. Goodnough, were not then available.

The writer's conclusions regarding the occurrence of cycles of rainfall were that cycles appear in all records, but that the magnitude and length of time of the departure from the normal is quite variable at different stations. Some records indicate a decreasing rainfall for a given period, while others at no very great distance may perhaps indicate the very reverse for the same period. Needless to say, all comparisons should be over the same term of years. In general, the occurrence of rainfall might be likened to the waves on the ocean, varying all the way from the little ripple to the big wave, with resultant diversity of period and magnitude.

It is probable that the major variations occurring in a record 100 years in length may become minor variations over a period of 1000 years, in just the same manner that we find variations occurring between 10- or 15-year periods and 100-year periods. This is, of course, only a mere guess, but has been substantiated to the satisfaction of some people, by the size of the annular rings in the large trees of California and by recent theories regarding the effect of sun spots.

It is desired to call attention to the fact that the method used by Mr. Goodnough in preparing his Fig. 2 is similar to the one used by the writer in preparing his successive

runoff would be greater than for the conditions given by Mr. Hufeland.

The writer is unable to believe that Mr. Hufeland has correctly interpreted the foreign practice quoted, and would be interested in having this work reexamined in order that what has been published may be properly supplemented and revised.

W. W. HORNER.

325 City Hall, St. Louis, Mo.

Sir—In your issue of Nov. 5, 1914, there is an article by O. Hufeland on a graphic method of determining storm-water runoff. Mr. Hufeland is entitled to many thanks for his assault upon the exponential formulas, which, like all popular fallacies, die hard, but why thicken that "fog of theories" to 100% opaqueness by importing an ultra-theoretical method?

Mr. Hufeland asks us to assume that the rainfall commences suddenly, continues uniformly and ceases abruptly. He says that a "definite intensity" means a "rate of precipitation which is substantially uniform during the period" (the italics are mine), and this definite intensity is the foundation stone of the method.

To anyone who has even an elementary knowledge of the subject, the salient point about rainfall is that it is decidedly nonuniform. Therefore, how is it possible that results predicated on *substantial* uniformity should hit anywhere near the mark?

It is hard to see why this method by Vicari should be advocated when the best practice in America tends toward the use of Mr. Kuichling's Rational Method, which involves no such absurdities in its theory, and which is much easier to use.

It is true that the Rational Method assumes the maximum discharge to take place when the water arrives from the furthest points and that this is not true for all drainage areas with the hypothetical storm assumed by the Germans. It is a fact, however, that in practice the Rational Method is very near the truth. For here in America the general type of storm is characterized by a moderate rate of rain for a short time, then a heavy downpour that lets up more or less gradually and irregularly. For this type of storm, which we naturally design our drains to carry, the maximum discharge actually does occur when the water from the furthest point arrives, and the Rational Method is theoretically and practically correct.

It is, to say the least, inconsistent to talk of a "fog of theories" and then attempt to promulgate the doctrine that the discharge of a lateral is characterized by a period of absolutely uniform increase, then a long period of constant rate of flow and another of absolutely uniform decrease. That such assumptions are the wildest kind of theorizing is apparent to anyone who has watched a sewer during a storm or inspected a gage record.

Mr. Kuichling is quoted as insisting on the use of "actual uniform intensities of rainfall." The writer of this letter once elaborated a method of computing runoff which was designed to remove some of the theoretical deficiencies of the Rational Method. As a consequence, he enjoyed the acquaintance of the late Mr. Kuichling and obtained his opinions on the subject direct. Neither by any spoken word nor in any published account can he recollect any such statement. The rate of rainfall used in the Rational Method is the *average* rate of rainfall dur-

ing the period of concentration, irrespective of whether that intensity was constant or varied.

Mr. Kuichling did, however, urge runoff investigators to pay particular attention to those rare intervals when the rainfall is constant or nearly so for a time, for he considered that in this way only could the value of the coefficient of imperviousness be obtained. His insistence was that these values should be rationally obtained and poor guesswork eliminated. The wisdom of this can be appreciated by referring to the values given by Mr. Hufeland. Roofs that shed only 80% of a hard rain are certainly in need of repairs, and pavements classified as "waterproof," which retain 30% of heavy precipitations, demand a graft investigation.

CARL H. NORDELL,

Assistant Engineer, Sewerage Commission.

Milwaukee, Wis., Nov. 24, 1914.

Sir—The article on "A Graphic Method of Determining Runoff in Storm Sewers," which appeared in ENGINEERING NEWS, Nov. 5, 1914, is of particular interest to the writer, who has been studying this subject somewhat of late.

Even a slight investigation of the common formulas for runoff reveals their crudeness for use in rational engineering designs, unless they are based on some local conditions unknown to the average engineer, which make them applicable only under the conditions assumed.

One part in the paper is not entirely clear to the writer. The method seems to cover a design which is correct for only one storm of a given uniform intensity for a given or assumed period of duration. What would be the effect upon the design if the storm were of shorter or longer duration with correspondingly greater or lesser rates of precipitation? If the rate of precipitation in inches per hour were a linear function of the period for which that rate were constant, the effect of different storms might be practically negligible. However, the rate of precipitation is not a linear function of the time as is evident from the published curves, showing the observations made in numerous localities.

If my understanding of the graphic method is correct, Fig. 3 or Fig. 4 of the paper can be made applicable to storms of other durations than that assumed in the example by decreasing or increasing the length t_r and using a new vertical scale proportional to the new rate of precipitation. This can be easily done by shifting the curve $A'K'$ to a parallel position. But this will change the location of the maximum ordinate NL , since the points N and L will no longer be in the same vertical. A new maximum ordinate must, therefore, be found for the new condition, and its value, reduced or increased in proportion to the change in the rate of precipitation, compared with the first value obtained. For example, if t_r were reduced, say 20%, or from 20 min. to 16 min., the ordinate NL would be reduced perhaps 10%, while the rate of precipitation might be increased 15%, leaving roughly 5% to be provided for by increased capacity. The section I_{11} still need only be designed for the same capacity as I_{10} , as shown in the paper.

Now suppose the duration of the storm to be increased 50%, then t_r would be increased 50% and NL might be increased about 25%, while the rate might be decreased only 20%, leaving 5% increase in capacity to be provided for by change in the design. But in this case the section

I_{11} will carry a greater quantity than I_0 , since the maximum ordinate extends into section (11) of the flow diagram.

It would, then, seem to the writer that a complete analysis of the problem would require an extension of the diagram by adding parallel positions of the curve $I-K'$ (Fig. 1) at intervals varying by five or ten minutes, from storms of very short duration, which might alter the design of some laterals, to storms having a duration equal to the time required for water to flow from the most remote inlet through the entire length of the sewer. A comparison of the corrected values of the maximum ordinates for the several positions of the curve $I-K'$ will then give the absolute maximum capacity required for the correct design of the sewer. It should be noted that the method set forth by Mr. Hufeland is admirably adapted for the investigation of the effect of various storms, as the labor of finding the length of the maximum ordinate for any storm is very small after the diagram has once been constructed.

Such an extension of the diagram as that suggested above might result in designing a sewer "gradually increasing in size to the outlet," especially when the duration of the storms considered is equal to the time of flow through the sewer and the rate of precipitation is heavy.

R. D. GOODRICH,
City Engineer.

Chevyenne, Wyo., Nov. 12, 1914.

[Replies by Mr. Hufeland to each of the foregoing letters follow.—EDITOR.]

Sir—I am under obligations to J. B. Balcomb for calling my attention to his paper of 1910, one of the few that I had not seen when I wrote my article. It is interesting in this connection because of the cumulative method which he describes and which resembles the Vicari method in that it draws curves for each drainage unit and adjusts their relation to each other to correspond to the time required for the flow from one unit to reach the next. On page 6 of his paper he says:

A radically rational method would consider each sewer an entire treating mass as though it were the only storm drain in the city. This would be in determining the time of surface concentration, the permeableness of the surface, the frequency with which it would be permeable to flood it, a precipitation curve suited to the individual characteristics, etc.

With the method described by me every one of these requirements is provided for with the minimum expenditure of labor.

Answering W. W. Horner I do not "disapprove of every thing," but of the subject—the past ten years. I am also aware of the existence of eight modifications of Mr. Knuchling's work, some of which missed rather exposed some of the fundamental errors of Mr. "disapproval."

For as a matter of fact, the word "disapproval" is confined to the subject of coordinated formulas it only indicates that some of the computations that are based on the use of such data. A short course experience in sewer design has given me a personal acquaintance with some of the errors that have been made in the use of the value of the coefficient of runoff. Far from criticizing American engineers, I have been teaching American theory as it is applied in the United States.

In my reply to Mr. Horner's letter involves a statement of personal opinion and I con-

cede his right to hold the opinion there expressed. The charge that the method proposed is one of "extreme refinement, etc.," embarrasses me somewhat because some of the comments made to me complain of the reverse.

I have answered Mr. Horner's letter so far as it relates to the personal views expressed in the article, but a discussion of the Vicari method would take more room than could be devoted to it in a letter. I do wish to call attention, however, to the fact that the correctness of the graphic method described has nothing to do with the storm selected, nor with the percentage of runoff, nor with the velocity formula used. The article clearly states that its use is based on the "acceptance of the postulate 'that a definite intensity of rainfall during a definite period must result in a definite maximum of runoff, but that this maximum does not necessarily occur when the runoff from the whole area reaches a given point in a collecting sewer.' A definite intensity means, of course, a rate of precipitation which is substantially uniform during the 'period,' etc." If it is correct to use the data available in the above way, the result given by the graphic method should be correct. I will concede that some engineers do not believe that the quantity of storm water reaching a sewer can be determined in so direct a manner. Mr. Knuchling was one of those who did and the writer agrees with him.

At some other time I hope to be able to furnish data justifying the latter view.

Carl H. Nordell's letter evinces a degree of heat that does not seem to be warranted by the criticisms which he makes. I am quite familiar with the "Additive Method of Runoff Determination of Storm-Water Sewers" which he presented to the Municipal Engineers of New York in 1909. While very painstaking, it was an effort to prescribe a theory based on very few data, resulting in a theoretical rainfall curve and a slide-rule for sewer computation (now in the market), based more or less on this curve. With the adoption of any other method, particularly if it is one that, due to its simplicity, may find a larger application, his theory and slide-rule will suffer more or less from desuetude.

Of course every writer on this subject today talks of the rational method, and many juggle with Mr. Knuchling's name in connection with it, often, as I have said in my answer to W. W. Horner's letter, to Mr. Knuchling's sorrow and anger. To soothe Mr. Nordell in that respect, I will inform him that Mr. Knuchling read my article, took down his copy of Hutton of the date of 1909, said he had seen the method, and his marks in the book proved it, but had dismissed it because at the first glance it seemed to be based on a table of runoff that he thought was wrong. In that respect he was like Mr. Nordell, who also objects to the runoff, but when I pointed out to Mr. Knuchling that those figures "had nothing to do with the case" he, like Mr. Nordell, looked again and said in his emphatic way: "It's a damned good thing." That illustrates one difference between Mr. Knuchling and Mr. Nordell. The former uses me of making a definite intensity the foundation of the method. I admit it.

Whether I have "even an elementary knowledge of the subject" of rainfall, as compared with the inferentially existing great knowledge of Mr. Nordell, is not for me to determine, but I hope in the near future to lay before the engineering profession a careful analysis of a very

long period of rainfall records from self-recording gages which may interest those who still have something to learn of this vexed subject. Unfortunately, I do not deserve the credit for the method with which Mr. Nordell finds so much fault, but have merely made accessible to some engineers a not altogether new help in computation. As I have said in my article, it is a free translation and the credit for it or the lack of "even an elementary knowledge of the subject?" must fall on K. Meier, Chief Engineer of Sewers in the city of Berlin, Germany, who wrote the original in "Hütte." My guilt is confined to the "importing," as Mr. Nordell expresses it.

R. D. Goodrich's understanding of the method is quite correct. Not only the maximum flow for the whole area, but the flow through any of the laterals at any period of the storm, will be represented by the ordinate for the time required.

One gratification furnished by the letters on this subject that have reached me is the conviction that the exponential formula is rapidly going to its long deserved obsolescence.

O. HUFELAND.

Municipal Building, New York City, Dec. 21, 1914.

NOTES AND QUERIES

The thickness of the asphalt pavement on the Junipero Serra Boulevard, San Francisco, Calif., is 2½ in. and not 3 in., as stated in the caption under Fig. 3, p. 1182, in our issue of Dec. 10, 1914. Also, through an oversight, the author referred to the bituminous rock deposits in the vicinity of Santa Cruz as bituminous limestone. These deposits are bituminous sandstone.

✱

On Establishing and Enforcing a British Standard for Sewage Effluents

A brief but important British report on a standard for sewage-works effluents and means for the enforcement of such a standard, has been made public. The committee was selected by the Association of Municipal Corporations and its members were chosen "for their skill in the design and maintenance of sewerage and sewage-disposal works." The report was submitted, on behalf of the committee, by its chairman, John D. Watson, Engineer to the Birmingham, Tame and Rea District Drainage Board, Tyburn, Birmingham, England.*

The deliberations of the committee were on the recommendations of the Royal Commission on Sewage Disposal dealing with standards of purity (Summary of Conclusions, par. 62, p. 17, Eighth Report; see *ENGINEERING NEWS*, Jan. 9, 1913).

After introductory statements the committee declared that although it believed British legislation on stream pollution (Public Health Act, 1875) "is greatly in need of amendment," yet "it is not desirable that standards of purity be prescribed by Parliament as the Royal Commis-

sion recommend." The remainder of the report, which is also the substance of the document, reads as follows:

4. The discussions established the fact that the Committee are in complete agreement that the law as it stands is greatly in need of amendment, but that it is not desirable that standards of purity should be prescribed by Parliament as the Royal Commission recommended.

5. The predominating factor in considering the advisability of creating a standard by Act of Parliament is the fact that no two cases are precisely similar. Differences manifest themselves in the character and volume of the stream into which the sewage effluent is discharged, and in the strength and characteristics of the sewage itself. In practice it is found that the strength of the sewage varies considerably even during a day of 24 hours, that no bacteria bed or irrigation field emits effluents of unvarying quality, and that it is unreasonable to expect a purification plant of excellent design and ample capacity to give as good results during a time of abnormally cold weather as it would during a normal season. If such a plant were large enough to produce a standard effluent in mid-winter, it would obviously be too large and expensive to meet the demands of the statute at other seasons, and vice versa.

6. In view of these varying conditions, the Committee think that it should be left to a central authority possessing adequate technical knowledge and power to determine finally all disputes, whether with public authorities or private persons, relating to the quality of sewage effluents, effluents from storm-water tanks, or any other liquid discharges into tidal rivers, streams, canals, ponds or lakes, and to settle any incidental questions, such as the amount of compensation or damages. Such central authority should not only have power to indicate the quality of the effluent which any sewage-works ought to produce, but should also have power to make regulations as to how and when samples should be taken for the purpose of ascertaining whether such effluent is produced.

7. The Committee have come to this view with reluctance, as they are aware of the prevalent objection to multiplying Government Boards, but they see no workable alternative to giving a Government Department absolute power to determine what must be done in individual cases, unless setting up a standard of purification by Act of Parliament. The latter course they believe to be quite impracticable, and any suggestion to make it less impracticable, by authorizing the central authority to override the statute in the interest of a municipality for any reason whatever, would probably be unsatisfactory even to the community in whose interest the concession is made.

8. Any amendment of the law should be to improve or conserve the condition of the rivers, and not to compel municipalities to discharge sewage effluents of uniform quality. The authority of the central authority should be paramount, and every municipality should be obliged to accept their dictum as to what is necessary; not, however, until a careful and unbiased inquiry into all the circumstances of each case has been made. As the judgment of the Local Government Board in reference to size and form of tanks, capacity of bacteria beds, etc., is now accepted, so should the decision of the central authority be accepted, in all matters relating to the pollution of rivers; and as the Local Government Board have power to vary their requirements as a condition of sanctioning a new loan, so should the central authority have power to vary their requirements as a condition of assuming responsibility for allowing effluent to enter a stream.

9. Whether the central authority should be affiliated with the Local Government Board, or with a new department under a Public Health Minister, it is not for this Committee to discuss here, but there should be no overlapping, and it should not be possible for one authority to order works to be constructed which another authority might deem useless or redundant.

10. The Committee believe that a central authority could greatly help municipalities by establishing and maintaining a national research department.

✱

Sewage Disposal for Indiana Cities by discharging the sewage into the Chicago drainage canal instead of into Lake Michigan has been proposed by the Sanitary District of Chicago as a means of reducing the pollution at the southern end of the lake. The cities in question are Whiting, Hammond, East Chicago and Gary, and the Sanitary District has offered the use (without charge) of the new Sag Canal, which is now being built from the Calumet River to the main drainage canal. The cities will vote in a few months on the acceptance of this proposition, which will involve a rearrangement of the sewers and the construction of the necessary connections.

*Among the other members of the committee were Gilbert J. Fowler, of Manchester, Geo. A. Hart, of Leeds, Joseph Garfield, of Bradford, and E. G. Mawbey, of Leicester. The report was dated Oct. 3, 1914, but was not made public until a few weeks ago. The report was addressed to H. G. Ritchard, Secretary, Association of Municipal Corporations, 9 Bridge St., Westminster, S. W., England.

The Failure of the Hippodrome Arcade, Youngstown, Ohio

On the morning of the 22d a section of the reinforced-concrete part of the new Hippodrome Building, under construction in Youngstown, O., collapsed and carried down in the debris some 20 workmen, three of whom were killed and 17 injured. **ENGINEERING NEWS** has refrained from any comment on the design or construction of this building until the causes of its failure until the results of a formal investigation might be available. It now appears probable, however, that any such official investigations will take place, so an effort has been made to procure all possible information regarding the building with a view to establishing, if possible, the cause of the failure.

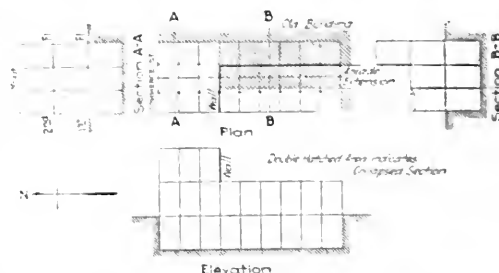

FIG. 1. OUTLINE PLAN AND SECTIONS OF THE HIPPODROME BUILDING ARCADE, YOUNGSTOWN

FIG. 2. DETAILS OF FIRST FLOOR, HIPPODROME ARCADE

The following data regarding the design of the building are authentic inasmuch as they are based on drawings and computations freely offered to the investigator. The statements regarding the construction of the building and the other data were made only after the most studied of the drawings are subject to the doubt which must attend all reports from testimony and eye witness statements.

GENERAL DESIGN

The Hippodrome Building, in Youngstown, is a steel structure having at one end of the main auditorium a small attached building, mainly two stories in height, which is known as the Hippodrome. It opens on Commerce St. at one end, while at the other end is reached from Federal St. through a narrow built part way in an old structure known as Federal St. and the rest of the way in the old Hippodrome building.

At the time of the collapse the building (theater and auditorium) was under construction. Some time after the start of the contract, however, the contractors,

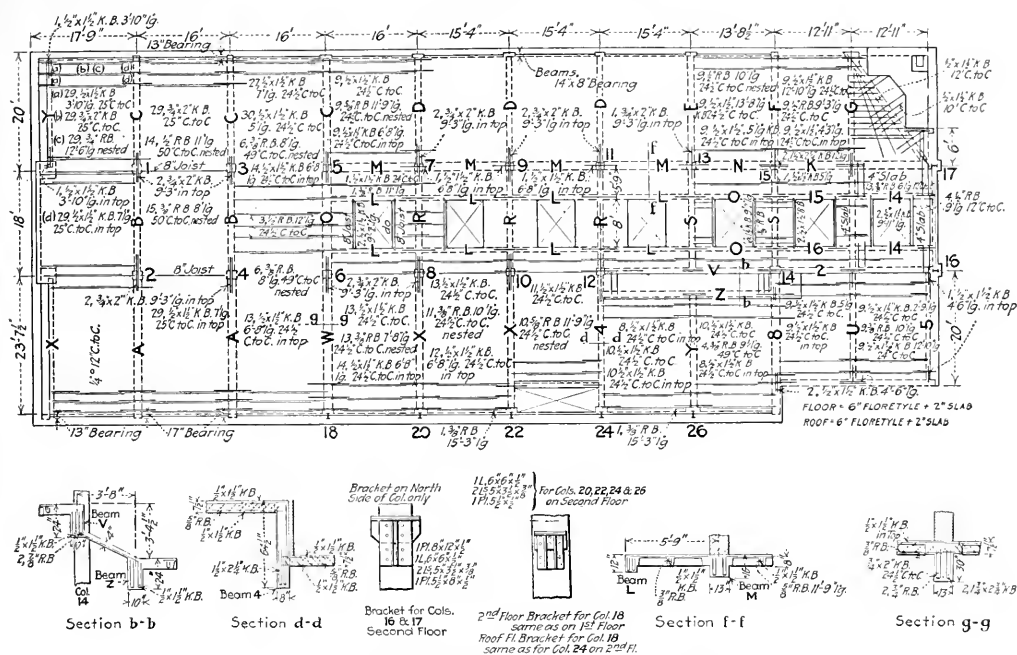

FIG. 3. DETAILS OF SECOND FLOOR, HIPPODROME ARCADE

with the full approval of the architects and of the architects' engineer, changed the design of the arcade addition to reinforced concrete. Work was proceeded upon on this basis.

The building was designed by Knox & Elliott, architects, of Cleveland, Ohio, who had for their structural engineer, J. C. Spencer, M. Am. Soc. C. E., also of Cleveland. The reinforced-concrete design for the arcade was made by the Trussed Concrete Steel Co., and approved by the architects. The building is being erected by the George A. Fuller Co., under the direction and inspection of the architects.

The arcade addition is in plan a rectangle, 151 ft. long and 62 ft. wide, and has in its main section two stories and a basement, the first floor being at the street level. The framing is complicated by the central arcade, but can be understood from the following description and a study of the accompanying drawings.

In general, the building is divided into three bays across its narrow portion and nine bays along its length. The arcade extends north six bays from the south end of the building. The northerly three bays are all two stories and basement high, but in the southerly six bays the easterly bay is two stories and basement high, and the westerly two bays, one story and basement high, with the arcade in the center bay. The west and south sides of the second story of the building have brick curtain walls pierced with numerous window openings and resting on the reinforced-concrete beams of the frame.

REINFORCED-CONCRETE DESIGN

The reinforced-concrete design comprises columns spaced in fairly uniform bays, carrying transverse gird-

¶18 in. c. to c.

ers which, in turn, carry the closely spaced beams of a beam-and-slab floor. The only variation from a normal reinforced-concrete frame is caused by the exterior wall

equations. The west wall is the curtain between the theater and the arcade and is carried on the steelwork of the theater and the reinforced concrete girders of the arcade frame into the steel columns of the theater and rest on brackets provided for that purpose (see Fig. 3). The north and south walls are carried on pilasters into which the arcade slabs are framed. The east wall is a brick bearing wall with notches, in which rest the girders and slabs of the floors. The design here calls for 13 to 14 in.

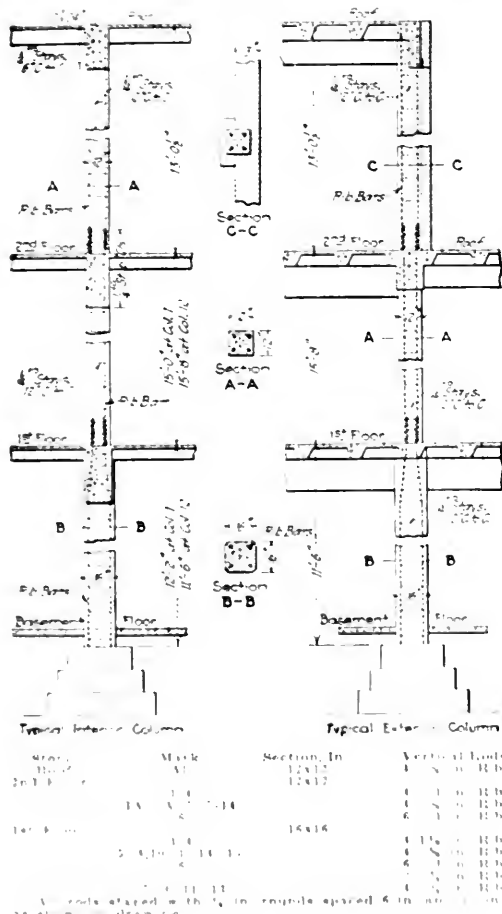

FIG. 4. COLUMN DETAILS

beams for each girder and at least a 4-in. bearing for all cases. The south wall is the old brick wall of the adjacent building. In the westerly panel, there being a stair well in the northeast corner, the floor was carried on columns in this wall, on the middle panel was to be provided with a space provided for the purpose. The design of this part is quite critical and is described in detail in the original design.

The column details are shown in Fig. 4. The columns are made of low unit concrete and are reinforced at the four corners with straight rods tied together (see Fig. 4) with wire. They vary from 16x16

in, in section in the basement floor to 12x12 in. in the second floor. The columns in the theater section wall, that is, the west side of the arcade, are of steel I-section; and carry on their other side the framing for the theater floors. They are provided on the arcade side with brackets (see Fig. 3), having a 6-in. outstanding leg, on which rests the girder.

GIRDERS.—The girder schedules for a number of the girders are shown in Figs. 2-3. These are typical. The girders are reinforced with straight rods with integral stirrups (Kahn type) and, where required, by deformed bars, nested in the pronged bars and bent up to go over the supports. In other girders continuity is provided by one or more separate Kahn bars, turned upside down and placed in the upper part of the beam over the column. At both the east and west walls the girders have only a bearing with no very effective steel continuity into the wall or column; they are figured as semi-continuous for these two outside panels.

FLOORS.—The floor-slab detail is shown in Fig. 2. The intermediate beams of the floor slab are parallel to the long side of the building and frame into the main girders, and continuity over those girders is taken care of by rods in the upper part of the beams. The slab is formed by the so-called "floresyle," that is, the opening is made by a pressed-steel continuous form, which gives the required shape.

LOADS AND STRESSES.—The design was made according to the following specifications:

Span length, center to center of span:

$f_s = 16,000$ lb. per sq. in.;

$f_c = 700$ lb. per sq. in.;

Shear in concrete = 60 lb. per sq. in.;

Compression in concrete in columns, 500 lb. per sq. in.;

Moment coefficient of partially continuous span, one-ninth; fully continuous, one-twelfth; negative moment over support, fully continuous beams, one-twenty-fourth.

Figure live loads for columns, 25% reduction is made for the second floor and a 30% reduction for the first floor.

The loads on the first floor for floor design were 150 lb. live load + 16 lb. for floor finish + 5 lb. for ceiling; for the second floor, 100 lb. live load + 16 lb. finish + 5 lb. ceiling; and for the roof, 40 lb. live load + 26 lb. finish + 5 lb. for the ceiling.

All beams and columns were figured according to the principles laid down in the report of the Joint Committee on Concrete and Reinforced Concrete, following the above noted specifications. The editors of *ENGINEERING NEWS* have not checked the whole design, but they have checked a number of the members, both beams, columns and slabs, and have found that they are designed within the specifications laid down above.

COLUMNS 16 AND 17.—With one exception, the design was followed in construction. This exception is, however, rather important and should be noted in detail.

The plan in Fig. 3, which in this respect at least is a fair sample of the concrete drawing, shows the 2d floor columns 16 and 17 at the south entrance to the arcade. The detail in Fig. 3 shows also the bracket provided on the reinforced concrete drawings to carry Beams K and 2 on Columns 17 and 16, respectively. The steel columns at these points were provided in the original design to carry

not only the steel-beam framing of the arcade, but also a new lintel over the arcade under the old wall of the building, which lies to the south of the arcade. The steel drawings, which were turned over to the reinforced-concrete designers, showed steel columns at this location and they assumed that such were required, and therefore left the column design as it was and provided steel brackets onto which to rest the concrete beams.

The construction was proceeded with upon this basis. The steel columns shown were detailed by the engineer, ordered, fabricated and brought to the job, as was also

FIG. 5. SKETCH OF CONNECTION OF BEAM K TO COLUMN 17, AS BUILT

the steel I-beam lintel. When construction reached this point, however, and the brick wall was pierced, it was found that it had been carried across this space on an I-beam lintel and there were in the location of these steel columns two 9-in. cast-iron columns on which the steel lintel rested. After due consideration on the part of the architect and the engineer, but without consultation with the reinforced-concrete designer, it was decided to clear out the brick wall from around the cast-iron columns, to incase them with concrete and to rest Beams K and 2 on this concrete.

Testimony is somewhat vague as to the precise method by which this connection was made, but according to our best information the sketch in Fig. 5 shows the condition at Column 17, which presumably was duplicated at Column 16. It will be seen that the 9-in. cast-iron column was incased with concrete to make a square 19-in. column (other testimony is to the effect that this incasement made only 15 in. square), which concrete incasement was reinforced with four 3/4-in. rods, one in each corner of the square. Into this the 13x21-in. Beam K was framed, having for its sole bearing the 5 in. (or, according to the other evidence, 3 in.) on the concrete casing of the cast-iron column feebly reinforced by the slender rods. The reinforcement of Beam K was continued up to as close as possible to the cast-iron column, which incidentally had its top some inches above the top of Beam K.

CONSTRUCTION

Construction of the concrete portion was started early in September and the various parts were begun on the following dates: Basement columns, Sept. 22; first floor, Sept. 23; second floor, Oct. 2; roof concrete, about Oct. 19; roof covering of cinder concrete, Oct. 24. On Oct. 26, at 4:45 p.m., that part of the reinforced-concrete structure lying east of the west arcade columns and south

of the transverse arcade wall (shown in the plan in Fig. 1) collapsed without apparent warning. The collapse was complete from roof to collar and the testimony of eye witnesses is so vague and confused that it cannot be determined in what part of the structure failure started nor in what manner it progressed. The five columns (numbered 7, 9, 11, 13 and 15) in the collapsed zone were thrown down, except that a stump of Column 7 remained standing. The girders at the east wall were pulled clean from the wall, as was to be expected inasmuch as their connection there was one of bearing and not of reinforcement. The girders on Columns 6, 8, 10, 12 and 14 were sheared off quite clean at the column head, and the rods which extended up into those columns and over the column head to insure continuity were pulled clean from the concrete of the beam. The plane of the floor slabs in the debris sloped down from either side of the break. The breaks at Columns 11 and 16 were clean, with no indication of any rod tie into the concrete surrounding those columns. Testimony is not clear as to whether the concrete casing of the cast-iron Columns 16 and 17 were sheared off beneath the bearing of the beams which framed into them or whether the break was in effect a continuation of the plane of the column casing.

MATERIAL—The cement used in the structure was the Alpha brand, which was tested by the Pittsburgh Testing Laboratory and which passed with a good margin all the standard specifications for portland cement.

FIG. 6. TEMPERATURE RECORD, YOUNGSTOWN, OHIO, SEPT. 23-OCT. 26, 1914

The aggregate was a separated sand and gravel coming from the local pit of the Concrete Stone & Sand Co. This aggregate is decidedly subject to suspicion. The testimony of a number of competent engineers in the Youngstown district is to the effect that it has a decided tendency toward loaminess and that it should never be used for reinforced-concrete work. So far as we were able to discover, it never had been used previous to this construction in reinforced-concrete work, although it has been used for concrete on street-paving work in Youngstown. The building inspector of the City of Youngstown states that he inspected the sand for the Hippodrome job and never found more than 4% loam, the inspection being the ordinary rough test in a graduated glass of water. The reinforcing steel was furnished by the Trussed Concrete Steel Co. There seems no reason to believe that this steel is in any way responsible for the failure.

The concrete was mixed in a batch mixer and in 1 : 2 : 4 proportions, and chuted into place from the high adjoining roof of the theater building. The chute was at a steep angle so that it was not necessary to add any great excess of water to make it flow freely. The temperature

during the laying of the concrete is shown in the accompanying Fig. 6, which record is taken from a local newspaper's recording thermometer for three-hour intervals during the day and night, except for the period each week when it is taken in the afternoon, Sunday, when no record was taken. From this it will be seen that just after the laying of the concrete columns was a three-day period of high low temperature, with at least one day below freezing. From that time on until the day before the collapse, however, the thermometer was well above freezing. A thermometer set in the day of the collapse, and removed at night, showed a temperature of 60°.

Support. The struts to support the floor consisted of heavy steel beams about 1 ft. 6 in. in both directions, and spaced at least one horizontal line of planks.

The question of strut removal under the floors is an extremely important one. Everyone connected with the building is sure that the struts under the first floor, that is, the struts under the second floor, were removed entirely at least a week before the collapse. It is agreed also that the struts were removed under the third-story roof. There is some dispute as to just up about the struts under the arcade, namely, the second floor; that is, the struts in the street level. The city engineer's superintendent states that while working on the struts at the north end of the building, the workmen found that collapse had been removed on the west end of the floor to allow the taking down of box forms for putting up the ceiling; he is emphatic in his statement that none of those struts under the col- umns of the second floor had been removed up to the time of the collapse. The city's assistant building inspector states that at five o'clock on the morning of Tuesday, the last time he was on the job before the failure, some workmen were taking down some of the struts in the walls of a portion of the first floor, but were not allowed to proceed at a time in order to permit the removal of some of the box forms under the beams and columns, however, he believes the struts as the boxes were removed. Several city engineers state that at three o'clock on the afternoon of the failure they noticed a considerable number of the struts on the street floor were removed from a portion of the building, but they are equally certain that those struts were not removed from the beams as they were taken down. That part of the building remained standing after the collapse, however, is not certain.

The concrete of the second floor from the failure is in a condition that is not entirely satisfactory, although it is not in a condition from which its strength might be estimated. However, there are now some pieces of concrete in the basement which eight and ten days after the failure were taken up to the head of the street. These were some six weeks later were tightly packed in concrete, exhibiting that a certain degree of strength was retained. There is no way, of course, of knowing whether this particular concrete was lo- cated in the same place. It might have been some roof concrete, or some of the old concrete sold at the time of the failure. There were three separate specimens (each about 12 in. by 12 in. by 12 in.) which were examined are not affected by the failure. It has reached a condition that is not as good as that expected in concrete two or three weeks after the failure, and is somewhat friable. It is in its present condition it undoubtedly is not considered a case of a concrete failure,

but its present condition also would throw considerable suspicion upon its strength at the time of the failure.

CONCLUSIONS

There are three factors which may contribute to the failure of a reinforced-concrete structure: the design, the materials and the construction.

The design of the Hippodrome arcade is somewhat less conservative in unit stresses than the report of the Joint Committee, but in that respect it does not differ from many other accepted reinforced-concrete designs nor can it be said these higher stresses are so dangerous as to cause failure. In the matter of beam reinforcement and connections, and column reinforcement the design follows standard practice and is at fault only so far as that practice is at fault.

Of the materials, the cement and steel are beyond criticism, but the concrete aggregate had a bad reputation in general and in this particular job was of doubtful quality, for the reports on its freedom from loam are not convincing. In fact, it seems probable that the set of the concrete was retarded by the character of the aggregate to such an extent that its strength at the time of failure was considerably less than it should have been. While there is no absolute evidence that this poor aggregate or resulting poor concrete was the cause of the collapse, suspicion may justly be directed toward it.

The construction was carried out by an experienced contractor of high reputation under the inspection of the architect. Except for the fact that the city's inspection service was perfunctory (a common enough condition) and the reinforced-concrete designer had no responsibility for the construction, the conditions of erection were ideal. The resulting work was satisfactory, except for the possible premature removal of forms and the elimination of the bracket from Columns 16 and 17, as noted above.

It seems probable—and this statement is made after listening to two absolutely contradictory statements by equally reliable men—that there was no intention to remove forms under the second floor on the day of the accident, but that there was a progressive removal and replacement of some of the struts, which might have thrown some of the girders into bearing. In view of the fact that there had been some chilly weather and particularly in view of the poor aggregate, it is more than probable that the girders thus relieved would be strained to the point of failure, although they were at the time over three weeks old. The connections at Columns 16 and 17 were decidedly weak and if the beams framing into these columns were thrown into stress by the removal of the centering, failure might readily have occurred there. It should also be noted that the centering under the first floor was removed when the columns and beams there were about four weeks old. While this is ample time under ordinary conditions, the aggregate and the temperature make this another possible failure point.

The final conclusion then is that the design of the structure was ample to have held up under the loading conditions at the time of failure if the concrete had had the expected strength of a 1-2-4 concrete three to four weeks old. This leaves as an alternative either that the basement columns and first-floor girders were not sufficiently strong at the time of collapse to carry the upper floors, or that the partial removal of struts at the street floor threw an excessive strain on the obviously weak concrete of the second floor.

An Example of Fire-Resistant Windows and Structure

The recent successful fire test passed by the new building for the Reliance Gauge Column Co., Cleveland, Ohio, is a very good testimonial to the possibilities of really

fireproof construction. This company had a new building nearly ready for occupancy, when on Dec. 14 last, at 2 a.m., a fire broke out in an immediately adjoining frame building. The engines, which were soon called, were in service until 5:30 of the same morning, by which time the frame building had been totally destroyed. The fire

FIG. 1. INTERIOR OF FIRST FLOOR OF RELIANCE GAUGE COLUMN CO.'S BUILDING, CLEVELAND, OHIO, AFTER FIRE OF DEC. 14

(Note that the whole damage is the warping of the steel sash, the breaking of one or two of the wire-glass panes, and the removal of an entire steel window frame to permit the entrance of firemen to fight the fire outside. The building was about to be occupied and contained considerable loose timber.)

FIG. 2. APPEARANCE OF THE CONCRETE, BRICK AND STONE FACE OF RELIANCE BUILDING AFTER FIRE OF DEC. 11

was intensely hot as the frame building was over 30 years old, and during that time had served as a home for a number of manufacturing concerns, with the result that it was very thoroughly dried out and fairly well saturated with oil.

The new Reliance Gauge Column Co. building is a four-story structure with reinforced-concrete frame, brick curtain walls lighted with factory-ribbed wire-glass in steel sash. At a somewhat greater distance from the frame building was a brick building with wooden window frames and fire shutters of wood coated with sheet metal. In this latter building a number of the shutters were badly damaged and some of the window frames were nearly destroyed. Its contents were damaged to the extent of \$5000 by fire and water.

The new reinforced-concrete building was immediately alongside of the burning structure and exposed to the full heat of the conflagration, but it resisted the fire with hardly any damage. In order to get at the blaze outside the firemen found it necessary to remove one of the steel window frames on the first floor. This was very difficult on account of the secure manner in which the frames were anchored into the structure, but by the use of a block and fall with twelve men on the line, the frame was finally torn loose and the building entered. Except for this damage and for one or two window panes broken during the fire, the damage to the concrete building was confined to the surface effect on the brick and concrete, which is well shown in the view in Fig. 2. The intense heat of the fire, it may be noted, spalled off the brick walls and the stone window sills on the second floor there shown.

The steel sash, which was of the Fenestra type, made

by the Larned & Sons' Pattern Co., of Detroit, Mich., was warped by the sun. In spite of this warping the joints are perfect, and the later section of the sash remain constant in length.

8

A Prominent Firm of Early American Bridge Builders

Some time ago, in an article in *ENGINEERING NEWS*, describing some old structural work, mention was made of "a Mr. Wilson, of Philadelphia," as having been connected with its design. This reference was to a member of the firm of Wilson Bros. & Co., whose members were among the notable bridge designers and builders in this country during the period following the Civil War.

The firm of Wilson Bros. & Co., Civil Engineers and Architects, was founded in January, 1876, by John A. Wilson, Joseph M. Wilson and Henry W. Wilson, all Members of the American Society of Civil Engineers. They were the sons of William Hasell Wilson, Honorary Member of the American Society of Civil Engineers, and also grandsons and great-grandsons of distinguished American civil engineers. John A. Wilson died Jan. 12, 1890, and Joseph M. Wilson, Nov. 21, 1902. The other brother, Henry W. Wilson, still lives in Philadelphia. After the death of the two elder brothers, the firm became Wilson, Harris & Richards, with Mr. Wilson as senior partner. Since he retired, about four years ago, the firm has been Harris & Richards.

John A. Wilson was born in 1837. He graduated from Rutgers Polytechnic Institute in 1856 and some of his earliest engineering experience was with John C. Trautwiler, as topographer on railway surveys in Central America. From 1858 until the formation of the firm of Wilson Bros. & Co., he was with the Pennsylvania R.R. and its subsidiaries, except during the Civil War period, when he served as Captain on the staff of General Couch. Mr. Wilson was at various times Chief Engineer of the Philadelphia & Erie R.R. (Pennsylvania R.R. Co., lessee), Chief Engineer of Maintenance of Way on the main line of the Pennsylvania R.R. and Chief Engineer of Location and Construction of the Low Grade Division of the Allegheny Valley R.R. He was a member of the American Institute of Mining Engineers and of the Franklin Institute.

Joseph M. Wilson was born in 1838 and graduated from Rutgers Polytechnic Institute in 1858. He entered the service of the Pennsylvania R.R. in 1860, and in the course of a few years became Engineer of Bridge and Buildings, which he retained until 1886. He served as Engineer and Expert for several Commissions on public works, including the Washington, D. C., tunnel and the New York, New Haven & Hartford R. R. terminal problem, and the New York, New Jersey Bridge, New York City, and New York City, New Jersey, trackage problems. He was the author of many papers and articles on engineering subjects. He was a member of the Institution of Civil Engineers, the American Society of Civil Engineers, the Fellows of the Fellows of the American Institute of Mining Engineers, and a member of the Franklin Institute and the American Society of Civil Engineers.

Henry W. Wilson, the youngest brother, was born in 1840. He graduated from the Rutgers Polytechnic Institute in 1860. He was engaged on surveys for the

Southern Pennsylvania R.R. in southern and western Pennsylvania as Assistant Engineer. In 1866 he resigned to enter the service of the Pennsylvania R.R. Co., where he was employed in bridge designing and in construction work until he entered the firm of Wilson Bros. & Co.

Notes from Engineering Schools

YALE UNIVERSITY—Land for a summer surveying camp has been obtained by the Sheffield Scientific School. It is located in East Lyme, Conn., about 40 miles from New Haven and easily accessible by the Shore Line Electric Ry. A number of farms have been purchased, which, with a strip of land donated by Morton F. Plant, make a tract $3\frac{1}{2}$ miles in length and $1\frac{1}{4}$ wide in portions, altogether embracing more than 1400 acres. The topography is varied and is adaptable to all kinds of surveying work. For over a mile a portion of the land borders on an inland lake. Rising up from the lake is elevated ground, making an admirable location for the camp site.

CORNELL UNIVERSITY—This fall, for the first time, the entering class in the five-year course in mechanical engineering registered in Sibley College and will consequently be under the supervision of this college from the time it matriculated until it graduates. Formerly the students in this course registered in the College of Arts and Sciences during the first two years. The young man who has completed the ordinary four-year high-school course, but who is not credited with the full four units of mathematics required for admission as a four-year engineering student, may now enter Sibley College in the five-year course; thus, instead of spending an additional year in a preparatory school in order to secure the mathematical training required for the four-year course, he may enter at once and obtain an additional year's work in college and thereby secure a more liberal training than is afforded by the regular course, which is limited to engineering subjects or those preparatory to such. This extra work may be distributed through the five years in such manner that, starting with elementary courses in the first year, the student may subsequently pursue in proper sequence the more advanced courses based on the preliminary ones. The extra time may be devoted to liberal or cultural subjects, to courses preparatory for the business or administrative side of engineering, to specialization in chemistry, physics or geology, or to mining or civil engineering.

KANSAS STATE AGRICULTURAL COLLEGE—The Division of Mechanic Arts has established a group of short courses in mechanic arts more or less parallel to the short courses usually given in agriculture. Courses are offered in (1) concrete construction, (2) shop work, including wood and iron working, (3) road building, irrigation and drainage, (4) steam and gas traction engines. These are open to men not less than 18 years of age, who have had a fair common school education. Each course is ten weeks in duration, and will be offered during the winter term, beginning Jan. 5, 1915.

The college has also recently established, in its secondary school, a series of trade practice courses in mechanic

arts. Courses are given in (1) blacksmithing, (2) carpentry, (3) concrete construction, (4) gas engines, (5) steam engines and boilers, and (6) traction engines. Persons who are 14 years of age or older, and who have completed the eighth grade of the public schools, are admitted to these courses without examination. The courses are each three years in length, and have much work in common, including English, mathematics, history, physics, drawing and beginning shopwork. The differentiation comes mostly in the second and third years, in the former of which about one-third and in the latter of which three-fifths of the time is devoted to the specialized subjects. The purpose of the courses is to teach the elements of the trades, while a general training is being given similar to that of the high school, with the foreign languages omitted.

The Department of Civil and Highway Engineering is planning to give a short course in road building, irrigation and drainage during the coming winter. The course will be of ten weeks' duration and is intended to accommodate county surveyors and county engineers, at present in practice, who desire additional technical work along lines in which they are particularly interested. Surveying, road construction, bridge and culvert construction, road laws and administration, irrigation and drainage engineering, and specifications and contracts are among the subjects which will be treated in the course.

NEWS NOTES

A 30-In. Water Main Burst in Portsmouth, Ohio, on Dec. 16. The main was located 6 ft. below the surface. The work of repairing the main began early on Dec. 17 and was completed on Dec. 20.

By Recent Annexation Richmond, Va., has added materially to its area and increased its population by some 20,000.

Typhoid Fever in Chicago has shown some increase lately, and the Health Department attributes this to pollution of the water-supply taken at the Chicago Ave. pumping station. Consumers have been advised to boil the water, and treatment with hypochlorite of lime has been instituted.

The Near-Side Stop Is a Success in New York, according to reports received by the Safety First Society, from the officials of the companies operating surface car lines. For example, the Third Ave. Ry. Co. reported a decrease of 245 accidents during September, October and November of this year over the same period in 1913. The near-side stop ordinance became effective Sept. 1.

The Water-Supply of Steamers on the Great Lakes is a serious menace to public health according to the annual report of Dr. Blue, Surgeon-General of the U. S. Public Health Service. It is pointed out that about 16,000,000 passengers are carried annually by steamers which draw their water-supply from the lake, and he recommends that this water should be treated on board the vessels before being distributed for drinking purposes.

An Automobile Speedway to be built for the Chicago Speedway Association will have a 2½-mile oval track designed for the highest possible speeds. The track will be 70 and 80 ft. wide on tangents and curves respectively, and will have a wood surface on a concrete base. Subways under the track will give access to the infield, which will be used for parking vehicles. Graham, Burnham & Co., of Chicago, are the architects.

The Smallest Central Electric Station in the country is probably that at Waldo, Wis., instead of the one in Clayton, Wis., noted in "Engineering News," Nov. 5, 1914. Five customers are supplied with 30-volt direct-current service from a ¼-kw. generator and storage battery. The town has 325 population and is undergoing a transition from kerosene to electric lights. There is a transmission line within 4½ miles of the village and service from it is agitated.

The Gold Medal for Safety presented annually by the Travelers Insurance Co. under the direction of the American Mu-

seum of Safety to "the American employer, either an individual or a corporation, who during the year has, in the judgment of the jury of awards of the Museum, achieved the most for the safety of employees," has been awarded this year to the Commonwealth Edison Co., of Chicago. The four previous winners of the gold medal have been the United States Steel Corporation, the Pennsylvania R.R. Co., the New York Edison Co. and the New York Telephone Co.

Municipal Improvements at Quito, Ecuador, are not as yet very extensive, according to a report received from a South American correspondent. The city has about one-half mile of streets paved with Belgian blocks, 28 miles with rough cobbles and 12 miles unpaved. The city has recently entered into a contract with William Schroeter & Co., a German concern, for installing fire hydrants and for putting in sewers. The city expects to buy fire engines soon. Our correspondent states that: "Heretofore, fires have been very rare and have been extinguished by hand or allowed to burn out. The houses are separated by very thick walls (3 ft.), and there is very little in them to burn."

Motorman's Cab Signals are provided for in the new automatic signal system adopted by the New York Municipal Railway for its portion of the new subway lines to be operated in New York City. The award of the contract for this system to the General Railway Signal Co. has been approved by the Public Service Commission. The new system provides block intervals and speed control with signals in the motorman's cab; if for any reason he fails to slow down at proper signals, a track device engages car attachments automatically reducing the speed to the desired rate independent of the motorman's action. Thus the train is allowed to continue at properly reduced speed, but is not stopped completely, as at present is necessary with the use of track trips in connection with block signals. The total bid of the Signal Company for equipping all the subway and elevated lines to be operated by the Municipal Railway Corporation is about \$1,113,000. The Public Service Commission is considering the issue of an order requiring the installation of such signals on the elevated lines in New York City, on which two serious accidents have occurred recently—both due to failure of the employees to perform their duties properly.

New York's Engineer Regiment Disbanded—An order by Governor Glynn of New York disbanding the 22d Regiment of Engineers, New York National Guard, was issued on Dec. 24. It reads as follows:

In accordance with the military law and to meet the requirements of the War Department, the Corps of Engineers is reorganized as follows: The regimental organization of the Corps of Engineers, known as the 22d Regiment, N. G. S. N. Y., and the battalions and companies as now constituted, except the band, are hereby disbanded. The officers serving with the same being surplus are hereby placed on the reserve list. The enlisted men will be transferred or discharged, as may be necessary to carry out this order, and will be continued in the service until so transferred or discharged.

Only 15 of the officers will be retained, it is reported, and 25% of the enlisted men will be discharged or transferred to other regiments. Major-General O'Ryan, commanding the state militia division, said: "The 22d Regiment is steeped in old infantry methods. All the officers and men capable of performing the services expected of engineers will be assigned to duty after the regiment is disbanded and the battalions reorganized." A special examining board (Colonel Van C. Lucas, chief engineer officer of the state militia, President) has been appointed to pass upon the qualifications of the officers.

PERSONALS

Mr. Milton H. Bronsdon has been reappointed Chief Engineer of Power and Lines of the Rhode Island Co., Providence, R. I. He was Chief Engineer from 1907 to 1912, and since then has been engaged in general practice in San Francisco, Calif.

Mr. Friend P. Williams, M. Am. Soc. C. E., Resident Engineer of the New York State Barge Canal, Mechanicsville, N. Y., has been appointed Division Engineer of the Western Division under State Engineer-elect Frank M. Williams, M. Am. Soc. C. E.

Prof. Charles M. Spofford, M. Am. Soc. C. E., head of the technology department of civil and sanitary engineering, Massachusetts Institute of Technology, has been appointed Expert Advisor for the City of Cambridge, Mass., in connection with some taxation problems.

Mr. J. A. Almrall, M. Am. Soc. M. E., and W. C. Adams announce that, owing to the recent death of Quimby N. Evans,

Prices of Engineering Materials

PRICE CHANGES AND THE BUSINESS OUTLOOK

Improvement in general business and contracting is confined to a few localities while from many quarters come authentic reports that business is more unsatisfactory than at any corresponding time in several years. Building activity is less, iron production smaller, consumption of metals not so large as a year ago, fewer men are employed, and fewer freight cars are in use. Against these unfavorable factors is the knowledge that there is more State and municipal work in progress than a year ago and that the path of idle funds awaits employment. Prospects for excellent business later are particularly bright when viewed from the agricultural side. Never has there been such an excellent outlook for wheat. Other crops will be large and farmers are undoubtedly more prosperous than ever before. The prosperity of the farmer is a good foundation upon which to build an active business season for all kinds of goods.

The inability of a dry-goods distributing house of international reputation to meet its obligations is of deep significance. Mindful of the fact that New York has ceased to be a dry-goods jobbing center, and perhaps that kind of business will have to make way for more modern methods, this failure indicates clearly that merchants scattered in the smaller towns in the West and the Southwest have been unable to make collections with sufficient regularity to pay the wholesaler. That it did not have a more serious effect is a strong testimonial to the stability of business.

It should be distinctly understood that present conditions are not essential and not financially ill. The abundance of funds is recognized in almost every section of the country, and exports of gold although frequent have caused no disturbance in monetary conditions. The trouble is clearly a lack of confidence.

Contract work has improved. This applies almost wholly to municipal, county and state work, and the reason for it is not hard to find. For the last two or three years municipalities have been unable to sell the bonds at anything like a satisfactory rate, and now funds are plentiful, work has been started. Then, too, there has been a more or less general awakening of civic pride in many of the older cities through the efforts of the N. Y. State Chamber of Commerce. Moreover, in some cities at least an effort has been made to advance construction work this year so that employment could be given to many who would otherwise be idle.

Prices in important lines continues to decline steadily. A quotation of \$1.05 Pittsburgh, for plates has been recorded. The index figures issued by the government show a lowering in the cost of living and even a well known maker of motor cars cut the price of this luxury \$200.

The unfavorable conditions in the iron trade are attracting more attention than in any other line. Production continues to decline, unfilled orders of the United States Steel Corporation are less and less each month, and prices in every line are the lowest in years and while stocks continue to accumulate. Contracts for the cast-iron segments for the East River tubes call for about 30,000 tons which went at an unusually low price, something under \$27 a ton, or a price close to the figures which were made for the Hudson tube at the time of severe business depression.

Labor is scarce, in fact, there is no difficulty in obtaining any number of workers for outside construction at \$1.50 a day for ordinary work. Immigration figures also tell a story. For the first five months of the year the number of steerage passengers coming into the country was 180,000 less than during the corresponding time last year.

Cement manufacturers are maintaining a price which is equivalent to about 90c. per bbl. in bulk at the mill. The shortage is said to occur, in fact, there is no difficulty in obtaining any number of workers for outside construction at \$1.50 a day for ordinary work. Immigration figures also tell a story. For the first five months of the year the number of steerage passengers coming into the country was 180,000 less than during the corresponding time last year.

Prices of metals continue to decline. Copper is below 14c., and tin is sold around the lowest prices reached in the last three years. Stocks of copper are accumulating; the same is true of tin.

The decline in crude oil has not been so spectacular as it was two months ago, but there has been much competition and in the East some particularly low prices have been secured to the retail trade. Some garages sell gasoline as low as 9c. per gallon.

LABOR

Contractors can get all the men they want for \$1.65 a day, and in many places \$1.50. Most laborers on state road work are paid \$1.50 for grading and \$1.65 for quarry work. Enforced vacations are a new rule in a number of lines. Many of the leading railways have reduced forces 10 per cent, compelling all employees from the president down to take a three-days' vacation each month. The Ford plant is granting a month's vacation without pay, and this has been extended to a number of other factories. Skilled labor is in somewhat better demand, but there is a drastic weeding out of inefficient help in all quarters. The Westinghouse strike in the month of June has a serious labor disturbance reported this month. It seems unlikely that there will be any company union to the Union as such. Business in the electrical line has shown a distinct falling off.

In the last statistics for the first five months of the year indicate clearly that there is less incentive for contract laborers to come to this country. For this fiscal year to June 12 and incoming steerage passengers numbered 437,000 compared with 450,000 in the corresponding period last year. This was a falling off of 13,000. At the same time the number of steerage passengers leaving this country in 1914 numbered 229,000 compared with 153,000 at the same time last year, making a difference of 76,000 this year than last, and making a difference of 250,000 in the number of laborers of this class.

CRUSHED STONE, SAND AND GRAVEL

Crushed Stone—Sellers of crushed stone in the New York market are of unanimous opinion that business has not been so unsatisfactory in a number of years. Indeed when the capacity of the stone-crushing plants is taken into consideration it is difficult to find a time when there was so little business ruling. Some more business has been placed in June than in May, but only a little more and it is doubtful if for the first six months of the year there has been 50% as much stone delivered in New York as there was last year in the same time. Prices are steady at 90c. to \$1 for 1½-in. stone, and 95c. to \$1.10 for ¾-in. stone. These quotations are for full cargo lots of 500 cu.yd. delivered alongside of dock New York or Brooklyn.

Sand and Gravel—Business is very light. There is practically no demand for gravel except subway gravel and little sand is moving. Gravel sells at 90c. for 1½ in., while special gravel for subway specifications is quoted at \$1.15.

Sand sells at 50c. per cu.yd. The above quotations are for full cargo lots of 500 cu.yd. delivered alongside of dock, New York. In Boston gravel sells at 35c. per cu.yd. at quarry 25 mi. out, the freight rate to Boston being 40c.

CEMENT, LIME AND BRICK

Portland Cement—The most surprising thing in the cement trade is that prices have been maintained. There is of course, some cutting, but there always is at such a period when the smaller mills are out for business. In some cases the cut has amounted to more than 10c. per bbl., but in general prices are firm. Most of the business now being placed is for road work in various states. The leading manufacturers of cement in the Lehigh Valley district are maintaining their position with a great deal of stubbornness and refusing to make concessions of any kind, this in spite of the fact that they do not seem to be running more than 50% of capacity. In the West business is slightly better, but not as good as it was hoped early in the year.

Quotations are unchanged at \$1.58 per bbl. for delivery within lighterage limits New York. This is equivalent to \$1.46 in Jersey City and 95c. per bbl. in bulk at the mill. Quotations given below do not include the allowance of 40c. for bags returned, and are as follows per bbl. f.o.b. the points named, not including package:

Boston.....	\$1.32	Chicago.....	\$1.15
Cleveland.....	1.30	Detroit.....	1.19
Duluth.....	1.38	Jersey City.....	1.06
Minneapolis.....	1.35	New York.....	1.18
Pittsburgh.....	1.10	St. Paul.....	1.35

Brick—Within the last week there has been improvement in the business situation and brick are in much better demand. Prices are steady at \$5.75 per M. in New York. From yards in Newark, \$7.25 is demanded.

Lime—Business is quiet, but prices are unchanged at 97c. per bbl. for state common, 200 lb. net; \$1.37 for 300 lb. "Star"; \$1.55 for 300 lb. finishing; \$1.10 for 200 lb. finishing and \$1.72 for 350 lb.

Plaster Blocks—Prices are without change, and the market is fairly active, quotations being as follows:

	Weight, per sq.ft., lb.	Price, per sq.ft., cents
2-in.....	7	6
3-in.....	8½	6½
4-in.....	11	7½

These blocks are made 32 in. long by 12½ in. wide, containing 3 sq.ft. of surface. The 2-in. blocks are solid, but the others are hollow.

IRON AND STEEL

Pig Iron—Sales of pig iron have been limited, and prices have declined to still lower levels, though stocks do not seem to be accumulating. The Southern iron market has been of more interest than anything else, and some sales in Birmingham have been made as low as \$10. The general market there, however, may be quoted at \$10.25@10.50. In the North there has been very little new buying. The chief feature of the market has been the sale of 80,000 tons of tunnel segment for the two East River tubes in New York, and although no quotations or authentic figures have been given out, it was understood that the price was below \$27 per ton for castings delivered in New York, machine, and ready to be placed. This is an unusually low quotation, and almost certainly the low figure at which the Hudson Tunnel segments were placed a number of years ago, when labor and materials were quoted at less than they are today. The unfilled orders of the United States Steel Corporation continue to decline, and on May 31 were slightly less than 400,000 tons.

Quotations for lots of 100 tons or over, and the prices named, are as follows: Cincinnati Southern Foundry No. 2, \$13.50@14; Northern Foundry No. 2, \$14.75@15.25; Northern Foundry No. 3, \$14.50@14.75; In New York, Northern Foundry No. 1, \$14.75@15; Northern Foundry No. 2X, \$14.50@14.75; and Southern Foundry No. 2, \$14.75@15; In Chicago, Northern Foundry No. 2, \$14.75@15; and Northern Foundry No. 3, \$13.50@14. In Pittsburgh, Bessemer is \$14.90 and \$15.90. These quotations include the 90c. freight rate from the valley to Pittsburgh. In Birmingham, Southern Foundry No. 2 is quoted at \$10.25@10.50, but there some few sales were made as low as \$10.

Pitting steel sheet—Prices are steady and unchanged at the Pittsburgh. The demand is good, compared with other lines of steel products.

Freight Rates.—The freight rates on finished-steel products from the Pittsburgh District, including plates, structural shapes, merchant steel and iron bars, pipe fittings, plain and galvanized wire, nails, rivets, spikes and bolts (in kegs) black sheets (except planished), chain, etc., are as follows, in cents per 100 lb.: Albany, 16; Buffalo, 11; Boston, 18; Baltimore, 14½; Canandaigua, 13½; Cleveland, 10; Columbus, 12; Cincinnati, 15; Chicago, 18; Denver, Colo., 85½; Harrisburg, 14½; Louisville, 18; New York, 16; Norfolk, 20; Philadelphia, 15; Rochester, 11½; Richmond, 20; Scranton, 15; St. Louis, 23; Washington, 14½.

Steel Shapes.—Some lines show an improvement but business is still dull. Large consumers are more willing to buy in carload lots for they feel the bottom has been reached and this reduces the volume of business that the jobber has. From warehouse New York prices are as follows:

Refined iron.	Cents Per lb.
1 to 1½ in. round and square.	1.89
1½ to 4 in. x ½ to 1 in.	1.80
1½ to 4 in. x ½ to 1 in.	2.00
Norway bars	2.20
Burdens bar iron	3.15

Soft steel:	Cents Per lb.
¾ to 3 in. round and square.	1.80
1 to 6 in. x ½ to 1 in.	1.80
1 to 6 in. x ½ to 1 in.	1.95
Angles—¾ and 1½ in.	1.90
Beams—1½ to 6 in. x ½ to 1 in.	2.10
Beams and channels—3 to 15 in.	1.80

Angles:	Cents Per lb.
3 in. x ½ in. and larger.	1.85
3 in. x ½ in. and 1½ in.	2.30
1½ to 2½ in. x ½ in.	2.05
1½ to 2½ in. x ½ in. and thicker.	1.95
1 to 1½ in. x ½ in.	2.00
1 to 1½ in. x ½ in.	2.10
1½ to 2½ in. x ½ in.	2.00
1½ to 2½ in. x ½ in.	2.10
3 in. and larger.	1.90

Spiral Riveted Pipe.—Prices are without change. The following quotations are f.o.b. factory, freight equalized with New York, being figured at a discount of 50, 10 and 10% from list. These are for orders amounting to approximately \$250. For large orders, prices are cheaper by 12½ to 20%.

Net price per 100 ft. With bolted joints complete				
Diameter in.	*Thickness Birmingham wire gage	Plain	Asphalted	Galvanized
1	18	\$19.76	\$21.48	\$30.74
5	18	29.10	32.70	37.14
6	16	33.05	35.76	49.72
7	16	37.58	40.76	56.82
8	16	43.17	46.80	65.00
9	16	50.06	50.10	74.22
10	14	66.42	71.08	96.15
11	14	71.20	76.57	102.24
12	14	83.75	88.15	118.30
13	14	89.67	96.57	127.98
14	14	99.14	105.51	138.85
15	14	108.05	114.89	151.92
16	14	117.53	124.82	165.58
17	14	127.42	135.95	179.14
20	12	182.79	193.30	248.39
22	12	200.48	210.64	269.21
24	12	219.92	231.07	293.95
26	10	280.22	292.41	377.78
28	10	301.72	311.89	395.37
30	10	321.81	339.15	420.64

*Made in both lighter and heavier gages at corresponding differences in price.

Chain.—Prices are steady and without change, as follows. These prices are per 100 lb., f.o.b. Pittsburgh:

¾ in.	\$7.50	1½ and 1 in.	3.00
1 in.	4.95	¾ and 1 in.	2.90
1½ in.	3.95	1 and 1½ in.	2.80
2 in.	3.40	1½ and 2 in.	2.70
2½ in.	3.20	1 to 1½ in.	2.60

EXTRAS TO ABOVE LIST PER 100 POUNDS

	For PB	For BBB
¾ in. and 1 in.	\$1.50	\$2.00
1½ in. and larger.	1.25	1.75

Switch Points.—The following prices are named f.o.b. mill, for switch points in lots of ten or more pairs: for 60-lb. rail, 10-ft. points, \$16.25; 15-ft. points, \$17.50; for 70-lb. rail, 10-ft. points, \$18.75; 15-ft. points, \$20.25; for 80-lb. rail, 10-ft. points, \$22.50; 15-ft. points, \$24.75; for 90-lb. rail, \$23.50. All of the above are furnished with three rods, except the 10-ft. points for 60- or 70-lb. rail, which have only two.

Nails.—Wire mills are operating at about 50% of capacity. The base quotation in Pittsburgh is \$1.50 to \$1.55 per keg of 100 lb. In New York wire nails from store are \$1.55 to \$2, and in Chicago nails are \$1.88 to \$2.50.

Wire.—The mills are operating to 50% of capacity, but this is the dull season. Prices are as follows: Plain barbed wire, \$1.35; painted barbed wire to jobbers in carload lots, \$1.55; to retailers in carloads, \$1.65; galvanized barbed wire, \$1.95. These quotations are f.o.b. Pittsburgh. In Chicago plain wire is \$1.55, painted barbed wire \$1.75, and galvanized barbed wire \$2.10. All of these prices are per 100 lb.

REINFORCING MATERIALS

Triangle Mesh.—Business is not especially active. Quotations are without change as follows:

PRICE PER 100 SQ. FT.

Style No.	Cross sec. area per sq. ft.	Plain material		Galvanized—	
		Carload lots	Less than car lots and over 10,000 sq. ft.	Carload lots	Less than car lots and over 10,000 sq. ft.

*This material is made in regular widths of 18, 22, 26, 30, 34, 42, 46, 50, 54 and 58 in. Standard lengths in rolls are 150, 250, 300 and 600 ft.

Bars, Concrete Reinforcing.—In some quarters there has been competition which forced prices below the 1.15c. price but in most cases that has been the bottom figure. Business is better than a month ago.

Quotations are as follows:

Size	Cents per pound—	
	Delivered from warehouse	Delivered from warehouse
¾ in. and larger	1.15	1.65
¾ in.	1.20	1.65
1 in.	1.35	1.95
1 in.	1.45	2.05
1 in.	1.75	2.30

METALS

Copper.—Prices have declined almost continuously throughout the month and very little business has been done. It is true that around the 1c. level there was some buying, but this was only in small lots, and consumers have taken no more than an academic interest in the market. For foreign accounts business has been light. The chief trouble with the trade in finished material is, while a fair business is ruling, there is an incentive to do it, because there is no profit. Prices at the end of the month were barely steady at 13.92½c. delivered in 30 days.

Tin.—A fair business has been transacted, but it has been spotty—one week good and another week extremely poor. The statistical position of tin would seem to warrant some what higher quotations, but a powerful clique is operating in the foreign market and has thus far been successful in keeping prices down. Stocks are good and deliveries during June were about 4000 tons.

Lead.—Some of the largest sellers of lead had a most satisfactory business during May; others reported little activity. Prices are undeniably low and there seems to be little doubt that the low quotations has induced some business. In New York lead can be had at 3.90c. and in St. Louis at 3.75c.

Spelter.—The market is exceedingly dull and prices are unremunerative to the producer. In fact, producers are in a bad way. Spelter is selling at about 5.55c. New York and 4.95c. St. Louis.

Miscellaneous Metals.—All kinds of old metals are in fair demand, but prices are low, and it is sometimes possible to shade even the quotations given below, which are for small lots:

Brass	\$2.25
Brass tubes, iron-pipe sizes	
¾ in.	.17
¾ in. to 3 in.	.16
3 in.	.16

Composition turnings	9.00
Lead, heavy	3.10
Lead, tin	3.15
Zinc scrap	3.50

Construction News

* Denotes work advertised in ENGINEERING NEWS.

† Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

RAILWAYS

†**Florida**—Tampa & Gulf Coast Ry.—This company has awarded the contract for construction of its proposed line from Belleair, Fla., to St. Petersburg. C. H. Lutz, Odessa, Fla., is Gen. Mgr.

†**Alabama**—Alabama Great Southern R.R.—This company, it is reported, will ask for bids in about two weeks for double-tracking two sections of its line. The first work will be between Birmingham, Ala., and Mobile Junction, Ala., 14 miles, and between York, Ala., and Meridian, Miss. This is part of the plan to double-track the entire line from Chattanooga, Tenn., to Meridian, Miss., for which \$25,000,000 in bonds have been issued. C. Dougherty, Cincinnati, Ohio, is Ch. Engr. Noted June 25.

†**Mississippi**—Alabama Great Southern R.R.—See item under Alabama.

†**Mississippi**—The Commercial Club of Yazoo City, Miss., has awarded the contract to WALTER C. MURPHY, Yazoo City, for the construction of a standard gage railroad from Yazoo City to Carthage, Miss. Bonds for \$100,000 have been issued.

†**Mississippi**—Mobile & Ohio R.R.—This company plans to double-track its line between Corinth, Miss., and Jackson, Tenn. B. A. Weed, Mobile, Ala., is Ch. Engr.

†**Louisiana**—Vicksburg, Alexandria & Southern Ry.—This company has awarded a contract to FRANK T. CONSTANT, Alexandria, La., to construct $8\frac{1}{2}$ miles of its proposed line, from Thogla, La., to Alexandria.

†**Tennessee**—Mobile & Ohio R.R.—See item under Mississippi.

†**Tennessee**—Belt Ry. of Chattanooga—This company, it is reported, has purchased 50 acres of land about two miles north of Chattanooga, Tenn. Terminals and yards will be constructed. H. S. Chamberlain, Chattanooga, is Pres.

†**Tennessee**—Nashville, Shiloh & Corinth Ry.—The citizens of Perry County, Tenn., will vote July 11, on the proposition to issue \$100,000 in bonds to aid the construction of this company's proposed line. The county seat of Perry County is Linden.

†**Tennessee**—Alabama Great Southern R.R.—See item under Alabama.

†**Kentucky**—Wasioto & Black Mountain R.R.—This company plans to construct an extension from Benham, Harlan County, Ky., to coal and timber lands in Letcher County, 16 miles.

†**Kentucky**—Illinois Central R.R.—This company plans to start work soon to double-track its line from Princeton to Eldersville, 40 miles, at an estimated cost of \$500,000. A. S. Baldwin, Chicago, Ill., is Ch. Engr.

†**Ohio**—Tri-State Rys. Co.—See item under Michigan.

†**Ohio**—Akron, Canton & Youngstown Ry.—This company plans to construct an extension to Canton, Ohio, from its present terminus at Magadore, Ohio. Estimated cost \$3,000,000. J. A. Donahey, Akron, Ohio, is Gen. Supt. and Ch. Engr.

†**Michigan**—Tri-State Rys. Co.—This company has awarded the contract to A. C. LINGEBACH & CO., Chicago, Ill., for constructing its proposed 13-mile railroad from Hillsdale, Mich., south to Pioneer, Ohio. Noted June 25.

†**Illinois**—La Salle Terminal R.R.—This company is having surveys made for its proposed seven-mile industrial line in the La Salle District, Ill. Isham, Randolph & Co., Chicago, Ill., are Engrs.

†**Wisconsin**—Wisconsin Southern Ry.—This company is receiving bids for the construction of 32 miles of railroad in Wisconsin. The officials of the company are located at Fond du Lac, Wis.

†**Nebraska**—Missouri Pacific R.R.—This company, it is reported, plans to rebuild its low-grade line between Omaha, Neb., and Kansas City, Mo. J. R. Stephens, St. Louis, Mo., is Ch. Engr.

†**Missouri**—Rolla, Ozark & Southern R.R.—This company was granted a charter, June 11, to construct a railroad out of Rolla. J. J. Cope, Salem, Mo., is interested.

†**Arkansas**—The construction of a railroad from Hot Springs, Ark., to Mena, Ark., 65 miles, is under consideration. W. E. Womble, Womble, Ark., is interested.

†**Arkansas**—Free Valley R.R.—This company has been granted a charter by the State Board of Railway Incorporation, Little Rock, to construct a railroad from Eagle Mills, Ark., to Princeton, Ark., 25 miles. Edward Bower, Little Rock, is interested.

†**Texas**—Kansas City, Mexico & Orient Ry.—This company plans to construct a line from Alpine, Tex., to the Rio Grande crossing, six miles from Presidio, Tex. R. P. Parker, San Angelo, Tex., is Ch. Engr.

†**Texas**—The Chamber of Commerce of Dallas, Tex., it is reported, is considering the construction of a railroad from Dallas to Palestine, Tex., 105 miles. J. R. Babcock, Dallas, is interested.

†**Idaho**—Oregon Short Line R.R.—This company plans to construct a line from the Yellowstone Park Branch into Teton Basins, Idaho, a distance of 75 miles. E. E. Calvin, Salt Lake City, Utah, is Gen. Mgr.

†**Nevada**—A merger by which two parallel lines of railroad in Nevada are to be made one, and trackage abandoned where initial cost was \$1,200,000, was decided upon at a conference in this city June 17, between the officials of the Las Vegas & Tonopah R.R. and Tonopah & Tidewater R.R., which was the Bullfrog Goldfield R.R. The two roads were built when the Goldfield-Tonopah District was prospering, but when the mines began to show disintegration it was found that one line was not needed. As mapped out, about half of the roads between Goldfield and Beatty will be abandoned, and the remaining segments hooked together. J. Ross Clark, Los Angeles, Calif., is Pres. L. V. & T. Ry.

†**California**—John Thorp, Memphis, Tenn., and Y. S. Scrimsnier, Portland, Ore., are interested in the construction of a railroad from Sacramento, Calif., to timber lands in Eldorado County, Calif.

†**Canada**—A Canadian holding company owns the charter for a continuous line of railway in western Canada, covering a distance of approximately 1250 miles. The line traverses a territory containing coal, timber, oil and various kinds of minerals and also a most productive wheat country. The company has made reconnaissance, route and location surveys costing about \$150,000, and has also made accurate estimates of the cost of construction. Bonding powers and government grants considerably exceeding the estimated cost of construction are granted to the company by acts of Canadian Parliament. The holding company owns several valuable tracts of coal, oil and timber lands and also a number of valuable terminal sites, situated in leading commercial centers. The company wishes to place the whole proposed line under construction immediately and is prepared to treat with capitalists or large contractors who will take the construction bonds at an agreed price and build and equip the said proposed lines according to the plans prepared by the company's engineers. Offers will only be entertained from capitalists or contractors of known standing. Correspondents are therefore required to give full particulars of their name and address in the first instance. Address first correspondence to Canadian Railway Builders, P. O. Box 501, Winnipeg, Man., Canada.

ELECTRIC RAILWAYS

†**Limestone, Maine**—George Cook, Caribou, is interested in the construction of an electric railway from Limestone to Caribou, about nine miles.

†**Buffalo, N. Y.**—The International Traction Co. contemplates the extension of its lines into the Reusens Park section. J. A. McKenna, Buffalo, is Secy.

†**Cortland, N. Y.**—The Cortland Traction Co. has been granted permission to double-track its line in Cortland. Edwin Duffey, Cortland, is Treas. and Mgr.

†**Gleason, Penn.**—The Gleason & Paddy Run Ry. Co. has been incorporated to construct an electric railway from Gleason to a point near Renovo, about 10 miles. I. W. Gleason is Pres.

†**Lititz, Penn.**—The Berks & Lancaster Ry. Co. has been incorporated to construct an electric railway from Lititz to Womelsdork. The incorporators are Frank J. Duckett, T. Holland Paist, William Grimshaw, Oscar R. Dare, Joseph J. Dimond, and H. E. Longbottom, Philadelphia, and V. J. McGlesney, Phoenixville.

†**Augusta, Ga.**—The Augusta-Aiken Ry. & Electric Co. has been granted a franchise to extend its line on Walton Way to the city limits. E. C. Deal, Augusta, is Gen. Mgr.

†**Savannah, Ga.**—The Savannah Electric Ry. Co. is preparing plans for the extension of its line on Habersham St. to 49th St. A. L. P. Smith, Savannah, is Pur. Agt.

†**St. Petersburg, Fla.**—The St. Petersburg & Gulf Ry. Co. contemplates double-tracking its lines on various streets in St. Petersburg. H. Walter Fuller, St. Petersburg, is Gen. Mgr.

†**Cincinnati, Ohio**—The Cincinnati, Indiana & Ohio River Ry. Co. has been organized to construct an electric railway from Cincinnati, Ohio, to Louisville, Ky. L. S. Cook, Cincinnati, is interested.

†**The Cincinnati Traction Co.** contemplates the extension of its Gilbert Ave. line on Hewitt, Wold and Fairfax Aves. T. Fitzgerald, Cincinnati, is Gen. Mgr.

†**Columbus, Ohio**—The Columbus Ry. & Light Co. is considering plans for double-tracking its line on Oak St. H. W. Clapp, Columbus, is Gen. Supt.

†**Georgetown, Ill.**—W. C. Jones, Georgetown, is interested in the construction of an electric railway from Georgetown to the new Busen mine.

†**Kewanee, Ill.**—Preliminary arrangements are being made by the Kewanee, Bradford & Henry Interurban Ry. Co. for the construction of an electric railway to connect Kewanee, Osceola, Bradford and Henry, about 35 miles. C. G. Lammman, Cedar Rapids, Iowa, is interested. Noted Apr. 2.

BRIDGES

★**Cambridge, Mass.**—(Official)—Bids will be received until noon, July 13 for rebuilding the Walden St. Bridge over the tracks of the Fitchburg R.R. The bridge will be 63 ft. long and 42 ft. wide. L. M. Hastings is City Engr.

★**Hartford, Conn.**—Bids will be received until 2 p.m. July 14, by the State Highway Commissioner, Hartford, for constructing bridges in several townships.

★**Albany, N. Y.**—Bids were received as follows, June 23, by Duncan W. Peck, State Supt. Pub. Wks., Albany, for Barge Canal contract No. 121, bridge work: General Erecting Co., Syracuse, \$9670; M. Fitzgerald, Hoosick Falls, N. Y., \$10,507; Luper & Remick, Buffalo, N. Y., \$10,416; engineer's estimate, \$9590.

★**Albany, N. Y.**—John A. Bensel, State Engr., Albany, opened bids, June 16, for constructing the proposed viaduct over Normanskill Creek, at Bethlehem. The lowest bid was submitted by the Penn Bridge Co., Beaver Falls, Penn., at \$38,234.

★**Albany, N. Y.**—(Barge Canal Work)—Bids will be received until noon, July 21, by Duncan W. Peck, State Supt. Public Wks., Albany, for Barge Canal Contracts Nos. 109 and 118, which provide for bridges over the Mohawk River at Crescent, N. Y., and Amsterdam, N. Y. The Crescent bridge will be about 1135 ft. long and will have five spans. The cost is estimated at \$190,213. The bridge at Amsterdam will span the Barge Canal and the river at that point. The cost of the bridge is estimated at \$153,900.

★**Buffalo, N. Y.**—The city plans to reconstruct the condemned Hamburg St. and Michigan St. viaducts. Bids will be received until July 8 by Francis C. Ward, Dir. Pub. Ser.

★**Norwich, N. Y.**—The citizens, June 11, voted in favor of constructing a reinforced concrete bridge at South Broad St.

★**Westfield, N. Y.**—The town has awarded the contract to E. N. & R. E. SPAULDING, Sheffield, N. Y., for constructing a reinforced-concrete arch across Little Chataqua Creek, at \$9665. Bids were opened June 12. Noted June 11.

★**Freehold, N. J.**—The Board of Chosen Freeholders has awarded the contract to OWEN J. MELECE, Long Branch, N. J., for raising and improving the bridge over Parker's Creek, near Little Silver, at \$17,900. Bids were opened June 10. Noted June 4.

★**Newark, N. J.**—The Board of Public Works, in conjunction with the Lehigh Valley R.R., plans to construct a viaduct over the company's tracks at Bay Ave. The structure will be used in connection with the opening of Haynes Ave.

★**Perth Amboy, N. J.**—Bids will be received by the Board of Chosen Freeholders and City Board of Eng., New Brunswick, N. J., until 2-30 p.m. July 20, for the construction of a reinforced bridge across the cut or crossing of the Lehigh Valley R.R. at Convery Place, Perth Amboy, according to plans and specifications on file at the office of Thomas H. Hascety, County Collector, New Brunswick, and at the office of Alvin B. Fox, Perth Amboy.

★**Trenton, N. J.**—The Board of Chosen Freeholders plans to construct a bridge at Lee Ave., Trenton. Theodore Tobish is County Engr.

★**Grindstone, Penn.**—Bids will be received until noon, July 8, by Harry Klinger, County Controller, Uniontown, Penn., for constructing a reinforced concrete bridge over Redstone Creek at Grindstone.

★**Guthrie, Penn.**—Bids will be received until 10 a.m., July 9, by the Lehigh County Commissioners, Allentown, for constructing a bridge over Jordan Creek at Guthrie. Harry C. Weinart is Clk.

★**Pittsburgh, Penn.**—Bids will be received until noon, July 12, by R. J. Cunningham, County Controller, Pittsburgh, for constructing Bridge No. 7 over Thompson's Run in Penn and Marion Townships.

★**Seranton, Penn.**—J. D. Hayes, Dir. Pub. Wks., has approved plans and specifications for the proposed steel bridge to be constructed across Legett's Creek. Estimated cost, \$7000.

★**Waynesburg, Penn.**—The Green County Commissioners have awarded the contract to the GRASSON CONSTRUCTION CO. for constructing a concrete bridge over Pumpkin Run, at \$10,775.

★**West Chester, Penn.**—Bids will be received until noon, July 6, by Isaac V. Ash, County Controller, West Chester, for constructing a steel bridge over Doe Run Creek. Noted May 14.

★**Wilkes-Barre, Penn.**—The County Commissioners, Wilkes-Barre, have awarded the contract to F. A. REYNOLDS & SON, Scranton, Penn., for constructing a 12-span concrete highway bridge at \$19,466. David A. Keefe, Athol, Penn., is Engr.

★**Wilkes-Barre, Penn.**—Bids will be asked at once by the City Council for the proposed bridge to connect the East End of Wilkes-Barre and North Wilkes-Barre. B. K. Finch is City Engr. Noted June 25.

★**York, Penn.**—Charles Williams, County Engr., York, has prepared plans and specifications for one stone arch and five reinforced concrete bridges to be constructed in various parts of the county.

★**Oakland, Md.**—The County Court, Oakland, has awarded the contract to the FARRIS BRIDGE CO., Charleston, W. Va., for the construction of a bridge at Davis Ford in Patterson's Creek, at about \$5000.

★**Durham, N. C.**—(Official)—The contract has been awarded by the county to the CURTIS-THORNTON CO., Burlington, N. C., for constructing two bridges, at \$1937.

★**Hillsboro, N. C.**—(Official)—The contract has been awarded by Orange County to the CURTIS-THORNTON CO., Burlington, N. C., for constructing seven bridges, at \$4700.

★**Lexington, N. C.**—(Official)—Davidson County has awarded the contract to the CURTIS-THORNTON CO., Burlington, N. C., for constructing 13 bridges, at about \$7000.

★**Americus, Ga.**—The Commissioners of Sumter and Crisp Counties plan to construct a steel bridge connecting the two counties. Americus is the county seat of Sumter County.

★**Bay Minette, Ala.**—Bids will be received until July 14 by H. D. Smith, Probate Judge, Bay Minette, for constructing two bridges, one of steel and one of concrete.

★**Hamilton, Ala.**—The County Commissioners have awarded the contract to the SOUTHERN BRIDGE CO., Birmingham, Ala., for constructing a steel bridge across Buttahatchie River, one mile east of Hamilton, at \$6435.

★**Meridian, Miss.**—Bids will be received until July 6 by the Board of County Supervisors, Meridian, for constructing two steel bridges.

★**Vicksburg, Miss.**—Bids will be received until noon, July 6, by J. D. Laughlin, Chancery Clk., Vicksburg, for altering and repairing the steel bridge over Burden Bayou.

★**Crowley, La.**—The city has awarded the contract to AUSTIN BROS., Houston, Tex., for constructing a bridge, at \$5275.

★**Winnsboro, La.**—The Police Jury, June 22, awarded the contract to the VINCENNES BRIDGE CO., Vincennes, Ind., for constructing five steel bridges, at \$5527.

★**Covington, Ky.**—The city plans to construct a viaduct at Delta Ave. to eliminate the grade crossing at that point. Frank Rashaig is City Engr.

★**Louisville, Ky.**—Bids are being received by the Board of Public Works for the construction of a concrete bridge over Beargrass Creek at Ellison Ave. Estimated cost, \$12,000. D. R. Logan is City Engr. Noted Apr. 15.

★**Whitesburg, Ky.**—Bids will be received until Aug. 2 by the Judge of the County Court, Whitesburg, for constructing three bridges over the Kentucky River. The bridges will be of 108-, 114- and 120-ft. spans. I. N. Lewis, Whitesburg, is County Rd. Engr.

★**Cincinnati, Ohio.**—The citizens, July 14, will vote on the proposition to issue \$50,000 for constructing and repairing bridges. Fred Schneller is Clk. of Council.

★**Minneapolis, Ohio.**—Bids will be asked at once by the county, Commissioners, Dayton, Ohio, for constructing the Lincoln Ave. Bridge at Cincinnati. The structure will be 680 ft. long. Victor C. Smith is County Supt.

★**Tiffin, Ohio.**—(Official)—Bids were received, June 20, by the Commissioners of Seneca County for constructing three steel bridges in various parts of the county. The contract may be awarded to the MIDDLEBURY-NEWBURGH CO., Fremont, Ohio, at \$1110. J. E. Hershberger is County Aud.

★**Toledo, Ohio.**—Bids will be received by the Lucas County Commissioners, Toledo, until 10 a.m., July 17, for constructing several bridges over the Miami & Erie Canal. Charles J. Sargenbacher is County Aud.

★**Aurora, Ill.**—(Official)—Bids were opened, June 20, by the Town Clerk for constructing the Montgomery Bridge over the Fox River. The contract has been awarded to NEWKIRK & POWERS, Joliet, Ill., at \$12,307.

★**Waupaca, Wis.**—Bids will be received by the County Clerk, Waupaca, until July 7, for the construction of three bridges.

★**Council Bluffs, Iowa.**—The County Supervisors have awarded the contract to the LANA CONSTRUCTION CO., Council Bluffs, for bridge work in six townships, at \$24,958.

★**East Dodge, Iowa.**—The City Council has awarded the contract to S. M. STARK & CO., Des Moines, Iowa, for constructing two reinforced concrete bridges over the ravine north of Prospect Hill and over Lizard Creek, at \$15,300.

★**West Union, Iowa.**—The county plans to construct bridges in various parts of the county to cost \$28,000. G. A. Hunt is County Engr.

★**Hastings, Minn.**—Bids will be received until noon, July 13, by P. A. Hoffman, County Aud., Hastings, for constructing three reinforced concrete bridges in various parts of the county.

★**Minneapolis, Minn.**—F. W. Cappelen, City Engr., has estimated the cost of the proposed bridge over the Mississippi River between 14th Ave. South and 19th Ave. S. E., at \$265,000.

★**Stillwater, Minn.**—Bids will be received until July 7 by the City Council for constructing a concrete bridge across Kuske Rivine. L. W. Clark is City Engr.

★**Concordia, Kan.**—A. R. Losh, Engr., Topeka, Kan., has prepared plans for eight concrete bridges for the Cloud County Commissioners, Concordia.

★**Erie, Kan.**—The Neosho County Commissioners, Erie, plan to construct four concrete bridges to cost \$20,000.

★**La Crosse, Kan.**—Bids will be received until noon, July 6, by the Board of County Commissioners, La Crosse, for constructing the superstructure of the proposed steel bridge over Walnut Creek. The structure will have one main span, 50 ft. long and two approaches 25 ft. and 30 ft. long, respectively. M. M. Wilson is County Clk.

★**Mankato, Kan.**—Plans have been prepared by A. R. Losh Engr., Topeka, Kan., for seven concrete bridges for the Jewell County Commissioners, Mankato.

★**Nebraska City, Neb.**—(Official)—Bids were opened June 8 by the Board of Commissioners of Otoe county for constructing a concrete bridge across North Table Creek. The contract is awarded to the WILLIAM REYNOLDS CONCRETE CO., Nebraska City, at \$7500. Noted May 28.

★**Frontenac, Mont.**—The contract has been awarded by the county to the RELEY CONSTRUCTION CO., Livingston, Mont., for constructing a concrete bridge over Clarke Fork River at Frontenac, at \$20,000. Noted May 21.

★**Malta, Mont.**—Bids will be received until July 6 by the Glasgow County Commissioners, Glasgow, for constructing a steel bridge over Flat Creek, about 33 miles south of Malta.

★**Nevada, Mo.**—Bids will be received until noon, July 21, by the Vernon County Court, Nevada, for constructing six bridges. J. B. Akers, Nevada, is County Clk.

Cleveland, Ohio.—(Official)—Bids will be received by the Commissioner of Purchases and Supplies, until noon, July 9, for furnishing stop cock boxes for the department of Public Utilities.

Cleveland, Ohio.—(Official)—Bids will be received by the Commissioner of Purchases and Supplies until noon, July 23 for constructing a concrete coagulant house and wash-water reservoir.

Columbus, Ohio.—Bids will be received by S. A. Kinnear, Dir. of Pub. Serv., until noon, July 7 for furnishing materials for the alum plant under Contract No. 24. Jerry O'Shaughnessy is Supt. of the Water Works.

†The contract for laying a water main in High St. has been awarded by the Board of Control to S. T. KNIGHT, at \$29,860.

Columbus, Ohio.—(Official)—Bids will be received by S. A. Kinnear, Dir. of Pub. Serv., until noon, July 23, for the equipment now located in the West Side pumping station. For details see advertisement under "Contracts To Be Let."

Fronton, Ohio.—The City Council contemplates purchasing Nixon Hill to be used for a reservoir for the proposed new water system.

Portsmouth, Ohio.—(Official)—Bids will be received until July 9 for furnishing the following material: 2400 ft. of 8-in. pipe, 900 ft. of 6-in. specials, 21 hydrants and 12,000 lb. of pig lead. George P. Chute, Portsmouth, is Engr. Noted May 28.

Michigan City, Ind.—Bids will be received until July 11 for constructing a 42-in. intake pipe 3000 ft. into Lake Michigan. Noted June 4.

Saranac, Mich.—Plans are being prepared by James R. Fitzpatrick, Engr., for the construction of a water system for Saranac.

Chicago, Ill.—(Official)—Bids were received June 25 for the construction of water main, 2. of the Wilson Ave. Tunnel as follows: M. L. McGOVERN & CO., Chicago, at \$1,243,130 (low bidder); Ulen Contracting Co., \$1,282,002; Keystone State Construction Co., \$1,243,471; Byrne Bros. Dredges & Eng. Co., \$1,188,030; Oleson & Daniels Co., \$1,650,238; Joseph Hanreddy, \$1,786,138. Noted June 11.

Litchfield, Ill.—The City Council has appropriated \$75,000 for the installation of a water system at Litchfield.

Rock Island, Ill.—The City Commission will lay water main in the factory district. The estimated cost is \$13,735. W. Treichler is City Engr.

Kenosha, Wis.—The Board of Water Commissioners contemplates installing new equipment in the water station to increase the supply; the plant for a larger intake has been dropped and the new centrifugal pump is being considered. E. Brennen is City Engr.

Manitowish, Wis.—The City Council has authorized the extension of the water mains 20 blocks. The estimated cost is \$10,000. E. K. Fitz is City Engr.

Des Moines, Iowa.—Bids will soon be received for the construction of a water system. The estimated cost is \$7000. G. T. Simpson is Consult. Engr. Noted June 4.

Morning Sun, Iowa.—Press reports state that Harper & Stiles, Grand Ave., Temple, Kansas City, Mo., are preparing plans for the construction of a water system at Morning Sun.

Aurora, Minn.—The city will issue bonds for \$15,000 for the improvement of the water system. Noted May 28.

Duluth, Minn.—According to press reports the City Council has authorized the laying of water main near the Lakewood pumping station. The estimated cost is \$21,500.

Holton, Kan.—Plans are being prepared for the installation of a water system for which bids will soon be received. Worley & Black, Kansas City, Kan., are the Engrs.

♦**Jos. H. Wallace & Co.**, Industrial Engineers, Temple Court Bldg., New York, announce that they have found it necessary to open an office at Montreal, Que., to take care of Canadian business. This office will be in charge of two members of the firm, Jos. Perry and P. R. H. Murphy.

♦**The Industrial Works**, Bay City, Mich., will handle business of the Chicago territory from the main office in Bay City. In the near future a sales office will be opened in Chicago under the name of the Industrial Works.

♦**The Terry Steam Turbine Co.**, Hartford, Conn., informs us that business has been more satisfactory than in several months, and in order to take care of the increase, additional tools have been installed increasing the capacity of the shop approximately 25%.

♦**The Trussed Concrete Steel Co.**, has moved its general offices to Youngstown, Ohio. This step was taken to bring the selling and manufacturing organizations in closer communication. At the same time, an office will be maintained in Detroit to take care of the sales inquiries originating in that territory. The Publicity Department of the company will remain in Detroit.

Contracts to Be Let

Bids received until July 8, 1914.

Sewage Screen

WEST 54TH ST. SEWAGE TREATMENT WORKS.
CONTRACT NO. 2

Cleveland, Ohio.

Sealed proposals will be received at the office of the Commissioner of Purchases and Supplies, No. 513 City Hall, until 12 o'clock M., July 8, 1914, for furnishing and installing a mechanical self-cleaning screen.

Copies of plans and specifications and blank proposals can be obtained at the office of the Commissioner of Engineering Room No. 401 and No. 417 City Hall, after June 27.

The time required to complete the work is an essential part of this contract.

Each proposal must contain the full name of the party or parties making the same and all persons interested therein, and must be accompanied by a certified check for Five Hundred (\$500.00) Dollars, payable to the City of Cleveland on a solvent bank as surety that if the bid be accepted a contract will be entered into and the performance of it properly secured.

No proposal will be entertained unless made on the blanks furnished by the Commissioner of Engineering and delivered at the office of the Commissioner of Purchases and Supplies, No. 513 City Hall, previous to 12 o'clock M. on the day specified.

The City reserves the right to reject any or all bids.

A. R. CALLOW,

Commissioner of Purchases and Supplies.

✕

Bids received until July 22, 1914.

Water Improvements and Repairs

Hudson, N. Y.

Sealed bids will be received until 7:30 P. M., July 22, 1914, by the Secretary of the Commission of Public Works, of the City of Hudson, N. Y., for furnishing material and labor necessary for water proofing the old wall and constructing a new high relief concrete cut-off wall on the upstream face of the storage dam at Churchtown, N. Y., also repairing the water face as described in the plans and specifications.

Copies of the plans and specifications are on file in the office of the Commission of Public Works and copies will be sent upon receipt of Ten Dollars (\$10.00). This amount will be refunded upon return of plans and specifications in good condition.

The Commission of Public Works reserves the right to reject any and all bids.

M. J. O'HARA,

City Engineer.

JOSEPH M. JAYES,

Secretary of the Commission of Public Works.

✕

Bids received until July 13, 1914.

Pipe, Valves, etc.

Killeen, Texas.

Sealed bids will be received by the Mayor and City Council of Killeen, Texas, at the City Hall, on the 13th day of July, 1914, for the purchase of the following:

- 1. 12 inch cast iron pipe
- 2. 12 inch cast iron pipe
- 3. 12 inch cast iron pipe
- 4. 12 inch cast iron pipe
- 5. 12 inch cast iron pipe
- 6. 12 inch cast iron pipe
- 7. 12 inch cast iron pipe
- 8. 12 inch cast iron pipe
- 9. 12 inch cast iron pipe
- 10. 12 inch cast iron pipe

Also 12 inch deep well pump.

Complete list of specifications can be had by mail from the City Engineer, Killeen, Texas, or at the Postoffice Building, Dallas, Texas.

— 42 —

Bids received until July 20, 1914.

Steel and Concrete Bridge

Perth Amboy, N. J.

Sealed proposals will be received by the Board of Chosen Freeholders at their room in the County Record Building at New Brunswick, N. J., on MONDAY, JULY 20, 1914, at 2:30 o'clock for the construction of a Steel and Concrete bridge across the cut or crossing of the Lehigh Valley Railroad at Convery Place in the City of Perth Amboy; according to plans and specifications on file at the office of Thomas H. Hagerly, County Collector, New Brunswick, N. J., and at the office of Alvin B. Fox, Perth Amboy, N. J.

A deposit of Ten Dollars (\$10.00) will be required for copies of plans which will be refunded upon the return of same in good condition.

Each bid must be accompanied by a certified check in the amount of \$5000.00 payable to the order of Thomas H. Hagerly, County Collector, without any conditional endorsements, which check shall be forfeited should the successful bidder fail to enter into contract and bond within ten days from the award of the bid.

The Board reserves the right to reject any or all bids if in their opinion it is to the best interest of the County so to do.

A. J. GERHARDT, Director.

Attest: ASHER W. RISSETT, Clerk.

✕

Bids received until July 23, 1914.

Equipment for Sale

Sealed proposals will be received by the director of public service of the city of Columbus, Ohio, at his office in City Hall Building, until 12 o'clock noon, standard time, of July 23, 1914, when they will be publicly opened and read at that hour, for the following equipment, located in what is known as the W. at Side Pumping Station, on West Spring Street and the Olentangy River, Columbus, Ohio, in accordance with the specifications on file in the office of the superintendent of the division of water, City Hall Building, from whom copies may be obtained.

One Gaskle compound horizontal condensing pumping engine, capacity ten million gallons per day.

Two Holly horizontal compound condensing engines, capacity twelve million gallons each, per day of 24 hours against the head of 200 feet with 80 pounds of steam.

The right is reserved to reject any and all bids.

S. A. KINNEAR,

Director of Public Service.

Attest: PAUL H. KEMMER, Clerk.

✕

Bids received until July 23, 1914.

Filtration Plant Contract No. 2

Sealed proposals will be received at the office of the Commissioner of Purchases and Supplies, Room 513 City Hall, Cleveland, Ohio, until 12 M., July 23, 1914, for the construction of a concrete coagulant house and wash water reservoir.

Each bid must be made in accordance with the plans, specifications and proposal blank, copies of which may be obtained of the Commissioner of Water, at 412 Superior Avenue, Cleveland, Ohio, upon deposit of twenty-five (\$25.00), which deposit may be redeemed by the return of the plans in good condition.

No proposal will be entertained unless made on the proposal blanks above mentioned and delivered at the office of the Commissioner of Purchases and Supplies previous to 12 M. on the day specified.

The City reserves the right to reject any or all bids.

ENCOURAGEMENT IN THE BUILDING OUTLOOK

Figures have just been completed showing that in 22 cities of the country the plans filed in June this year called for an expenditure of \$64,800,000, compared with \$62,200,000 in the same month last year. A gain of nearly \$3,000,000 was recorded in Eastern cities in June. This is by far the most favorable showing of the year, for it is a gain of 12%. For the first six months there was a falling off of 3.5%, showing a complete reversal of the trend.

In the West the outlook was good, but not as favorable as in the East. In 21 cities in the Middle West there was a gain in June of this year compared with last year of \$800,000, or 2.5%. For the first six months of the year there was a decrease of 0.5%.

In eight cities in the Southern states there was a falling off of \$1,166,000 in June, or 23%. For the half-year the decrease was less in proportion, amounting to \$3,625,000, or 15.7%.

For the entire country from which figures are available at this writing, including 51 cities, the building operations for the half year from plans filed with building inspectors amounted to \$322,000,000, compared with \$332,000,000 in the corresponding six months last year. The falling off of \$10,000,000 is rather small, amounting to only 3%.

In the accompanying table is given the official figures representing the estimated cost of new buildings from plans filed with the building inspectors for June, 1914, and June, 1913. The table also includes the figures covering the first six months of this year and a similar period of last year.

✦Building—Great Lakes, Ill.—The contract for constructing a two-story brick building at the naval station, Great Lakes has been awarded to C. W. PENCK, Waukegan, Ill., at \$14,515. Noted June 4.

✦Towers—Great Lakes, Ill.—The following bids were received by the Chief Bureau of Yards & Docks, Navy Dept., Washington, D. C., for constructing foundations for two 100 ft. steel towers at the Naval Training station: C. W. PENCK, 223 North St., Waukegan, Ill., \$24,800; C. W. PENCK, Waukegan, Ill., \$24,800; Des Moines Steel Co., 88 Curry Bldg., Pittsburgh, Penn., \$3500; John Jeffrey, 127 North Dearborn St., Chicago, Ill., \$2975. Noted July 2.

✦Steel Work and Cable—Ashland, Wis.—The contract for furnishing 11,000 ft. of submarine armored cable for the Ashland light station, has been awarded to the STANDARD UNDERGROUND CABLE CO., at \$2739. Noted May 28.

✦Gates, Etc.—Great Falls, Mont.—Bids will be received until 2 p.m., July 12, by H. H. Dyer, U. S. Reclamation Service, Great Falls, for furnishing structural steel, stands and accessories, for projects in the northern division.

✦Metal Flumes—Great Falls, Mont.—Bids were received for furnishing and delivering of a b. manufacturer's plant, metal flumes, as follows: (a) 97 lin. of 5 ft. 9 in. flumes, (b) 32 lin. of 5 ft. 9 in. flumes, (c) 6 ft. 4 in. in. (d) 10 ft. 10 in., (e) 10 ft. 10 in. (curved), (f) 11 ft. 5 1/2 in. in.

Levee Work—At Albany, N. Y., the city plans to deepen the Genesee River at a cost of \$100,000. F. T. Edwards is City Engineer.

Electric Lighting System—At Fort Worth, Tex., the city plans to install a new electric lighting system at Fort Worth. The National Telegraph and Telephone Co. is the contractor.

Pipe—At Albany, N. Y., the city plans to install a new pipe system at Albany. The Albany Water Works is the contractor.

Post Office—At Albany, N. Y., the city plans to install a new post office at Albany. The Albany Post Office is the contractor.

Bridge—At Albany, N. Y., the city plans to install a new bridge at Albany. The Albany Bridge is the contractor.

Turbine Engine—At Albany, N. Y., the city plans to install a new turbine engine at Albany. The Albany Turbine Engine is the contractor.

Post Office—At Albany, N. Y., the city plans to install a new post office at Albany. The Albany Post Office is the contractor.

Boilers and Accessories—At Albany, N. Y., the city plans to install a new boiler and accessories at Albany. The Albany Boilers and Accessories is the contractor.

MISCELLANEOUS

Dredging—At Albany, N. Y., the city plans to install a new dredging system at Albany. The Albany Dredging is the contractor.

Breakwater—At Albany, N. Y., the city plans to install a new breakwater at Albany. The Albany Breakwater is the contractor.

Museum Cases—At Albany, N. Y., the city plans to install a new museum cases at Albany. The Albany Museum Cases is the contractor.

Dredging, Etc.—At Albany, N. Y., the city plans to install a new dredging, etc. at Albany. The Albany Dredging, Etc. is the contractor.

Dock and Pockets, Etc.—At Albany, N. Y., the city plans to install a new dock and pockets, etc. at Albany. The Albany Dock and Pockets, Etc. is the contractor.

Subway—At Albany, N. Y., the city plans to install a new subway at Albany. The Albany Subway is the contractor.

Boatage—At Albany, N. Y., the city plans to install a new boatage at Albany. The Albany Boatage is the contractor.

Subway—At Albany, N. Y., the city plans to install a new subway at Albany. The Albany Subway is the contractor.

two-track rail road in the Borough of Manhattan, connecting the Broadway Subway with the Queensboro Bridge and extending from Seventh Ave. to Fifth Ave., where the two tracks diverge, are continuing through 59th and the other through 60th St. to Second Ave.

Dikes—At Redfield, N. Y., The State Conservation Commission, Albany, has granted permission to the Salmon River Lower Development Co. to construct dikes along the east side of Stillwater River or at Redfield.

Channel Work—At Rochester, N. Y.—The city plans to deepen the Genesee River at a cost of \$100,000. F. T. Edwards is City Engineer.

Dock Work—At Kearnsburg, N. J.—The Kearnsburg Steamboat Co. will enlarge its dock, now about one-half mile long to accommodate new tracks of the Jersey Central Traction Co.

Fire Apparatus—At Orange, N. J.—The City Commission plans to purchase two motor trucks and two motor hose wagons. J. F. Mirabai is City Clerk.

Harbor Work—At Trenton, N. J.—J. R. Fell, Jr., City Engineer, has planned plans for the proposed basin to be constructed in connection with the channel now being dredged. It will be 2000 x 100 ft. Plans for the municipal harbor terminals at Fair and Federal Sts. have also been completed.

Stables—At Pittsburgh, Penn.—Brown Bros., Potomac Ave., Pittsburgh, have submitted the lowest bid to the Department of Public Works for constructing a new stable, at about \$25,000. The building will be two stories high.

Barns—At State College, Penn.—Pennsylvania State College will cost not more than \$30,000.

Fire Station—At Wilkes-Barre, Penn.—Bids will be received until noon July 14 by F. H. Gates, City Clerk, for constructing a fire station.

Wharves—At Augusta, Ga.—Bids are being asked by the Augusta Bridge & Dock Co. for constructing wharves at the foot of Fifth St. The structures will be of steel.

Levees—At Augusta, Ga.—The city has awarded the contract to J. T. W. BROS. & SONS, Augusta, for constructing levees between Sixth St. and East Boundary, at about \$65,000.

Ditches—At Senatobia, Miss.—The Senatobia Creek Drainage Commission has awarded the contract to J. C. MILLER, Senatobia, Miss., for constructing two main ditches.

Levee Work—At New Orleans, La.—The State Board of Engineers, New Orleans, has awarded the contract to HELGASON BROS., Vicksburg, Miss., for levee work, at 20c. per cu. yd. The work calls for 30,000 cu. yds.

Drainage—At Jackson, Tenn.—Madison County, has sold \$75,000 of drainage bonds and will soon award a contract for the construction of a drainage canal 11 miles long, 55 ft. wide and 11 ft. deep.

Subway—At Cincinnati, Ohio—At the election in November the citizens will vote on the proposition to issue \$12,000,000 of bonds for the construction of the proposed canal subway. Frank King is City Engineer.

Elimination of Grade Crossings—At Cleveland, Ohio—The city plans to speed up the elimination of the grade crossings of the New York, Chicago and St. Louis Ry. from Fifth St. to S. W. to West 38th St. Robert Hoffman is City Engineer.

Pier Work—At Chicago, Ill.—The contract has been awarded by the city to E. L. SCHUBERTHELM, for constructing the superstructure of the proposed municipal pier at 11th St.

Grandstand—At Ames, Iowa—The Iowa State University, Ames, plans to construct a concrete grandstand and fence. Estimated cost, \$10,000.

Drain—At Iowa, Iowa—Bids will be received until 1 p.m., July 21 by C. H. Richards at the Iowa State Bank for constructing Main St. Drain in Davidson Township. Estimated cost, \$12,000.

Ditch—At Duluth, Minn.—The city has awarded the contract to O. N. BATHURSTON, DRAINAGE CO., Thief River Falls, Minn., for extending Ditch 11 at 12c. per cu. yd., or 6c. ft.

Ditch—At Duluth, Minn.—The contract has been awarded to the city to WILSON BROS., Cromwell, Minn., for Ditch 11 at 12c. per cu. yd., or 6c. ft.

Ditch—At Duluth, Minn.—Bids will be received until July 21 by S. S. Stewart, Duluth, Minn., for constructing Ditch 11 at 12c. per cu. yd., or 6c. ft.

Lake Protection—At St. Joseph, Mo.—Residents of St. Joseph, Mo., plan to protect Lake Country. The project is to be carried out by the Missouri River, Charles H. Smith is City Engineer.

Metal Cases—At Duluth, Minn.—The State Capital Commission, Duluth, Minn., has awarded the contract to J. C. MILLER, Senatobia, Miss., for constructing metal cases for the state capital at \$10,250.

Terminal Docks—At Dallas, Tex.—The contract for constructing a new terminal dock has been awarded to JOHN W. HARRIS, N. S. Harris, Mo., at about \$100,000. In addition, the city plans to install a new dock at the same place.

Boatage—At Dallas, Tex.—The city plans to install a new boatage at Dallas. The project is to be carried out by the Missouri River, Charles H. Smith is City Engineer.

Wharves—At Houston, Tex.—The citizens of Harris County, Tex., plan to construct a new wharves at Houston. The project is to be carried out by the Missouri River, Charles H. Smith is City Engineer.

Dredock—At Fort Worth, Tex.—A dredock 500 ft. long and 100 ft. wide will be built at Fort Worth. The project is to be carried out by the Missouri River, Charles H. Smith is City Engineer.

Dredock—At Fort Worth, Tex.—A dredock 500 ft. long and 100 ft. wide will be built at Fort Worth. The project is to be carried out by the Missouri River, Charles H. Smith is City Engineer.

Harbor Work—Seattle, Wash.—The W. T. BUTLER CONSTRUCTION CO., Central Bldg., Seattle, has been awarded the contract by the Seattle Port Commission for main elevator foundations, East Waterway terminals, at \$25,180. The contract includes 62,000 lin. ft. of piling, as well as foundations. Other bids were: Weymouth Construction Co., \$26,272; Franklin Engineering Co., \$26,696; alternate bid \$25,322; H. Brandt Construction Co., \$26,910; Graft Construction Co., \$27,343; Washington Construction Co., \$28,308; M. J. Hursen Co., \$28,600; Puget Sound Bridge & Dredging Co., \$28,835; Harrington Co., \$28,940; alternate bid \$27,700; Nettleton & Bruce-Eachbach Co., \$30,605; John Constructing Co., \$31,549; McRae Bros., \$31,697; Sound Construction & Engineering Co., \$21,718; C. F. Martin, \$32,492.

Comfort Stations—Seattle, Wash.—The city is considering the construction of public comfort stations and rest platforms. Estimated cost, \$25,000.

Dock Superstructure—Seattle, Wash.—The Port of Seattle Commission has awarded the contract to HARRINGTON-PETERS CO., Seattle, for constructing the superstructure of the Hamford St. Dock, at \$87,000. Noted July 2.

Dikes—Tacoma, Wash.—The County Commissioners of Pierce County, Tacoma, will establish a dike district outside the city limits of Tacoma, to reclaim between 1500 and 1900 acres of land.

Lumber—Los Angeles, Calif.—The Harbor Commission has awarded the contract to the SAN PEDRO LUMBER CO., for 1,500,000 ft. of lumber to be used in connection with the improvement of the inner harbor.

CONTRACT PRICE

Bridge Construction—Tiffin, Ohio—Bids were received by the Board of County Commissioners, May 23, for the construction of three concrete bridges across the Sandusky River at Market, Huss and Ella Sts., Tiffin, from (A) YANG CONSTRUCTION CO., Cumberland, Md. (awarded contract for Market St. bridge); (B) J. H. & LEWIS JONES, Postoria, Ohio and Kansas, Ohio (awarded contract for Huss St. bridge); (C) Wynlop, McGormley Co., Toledo, Ohio; (D) N. R. Porterfield, 17 Battery place, New York, N. Y.; (E) A. SCHECKELHOFF & SON, Fremont, Ohio (awarded contract for Ella St. bridge); (F) Walter C. Newhall Co., Citizens' Bldg., Cleveland, Ohio; (G) R. M. Fritz-Rumrort-Grant Co., Eberly Bldg., Cleveland, Ohio; (H) I. D. Tuttle Co., Bushnell Bldg., Springfield, Ohio; (I) Morse-McGormin & Bassett, Cleveland, Ohio. The item bids were as follows:

Ferry Boat—Oakland, Calif.—The San Francisco-Oakland Terminal Rys. Co. has awarded the contract for the construction of a 230-ft. ferry-boat to the MOORE & SCOTT IRON WORKS, Oakland, at \$305,000.

Granite Work—Oakland, Calif.—The City Council has awarded the contract for granite work on the municipal auditorium to the CALIFORNIA GRANITE CO., San Francisco, Calif., at \$71,557.

Dry Dock—San Francisco, Calif.—The Union Iron Works will ask for bids soon for the construction of a dry-dock to cost about \$2,500,000. John A. McGregor, 2567 Green St., San Francisco, is Pres.

Tunnel—San Francisco, Calif.—Bids will be received by the Board of Public Works until Aug. 19 for the construction of the Twin Peaks Tunnel. It will be 1200 ft. long, 30 ft. wide, 28 ft. high and will be lined with concrete. Estimated cost, \$3,300,000. Frederick J. Churchill is Secy. Bid. Noted May 21.

Plans and specifications are on file at the office of Engineering News, 505 Pearl St., New York.

Dams and Canals—San Francisco, Calif.—The Department of the Interior has given Leland & Myers, San Francisco, Calif., authority to proceed with reclamation work in Modoc County. About \$80,000 will be expended in constructing dams and canals.

Pavilion—San Francisco, Calif.—A National Committee has been formed for the purpose of building a British-American pavilion at the Panama-Pacific International Exposition, San Francisco. This body will work in cooperation with the British Committee formed for the same purpose in London, whose members, it is expected, will contribute funds for the purpose and send an exhibit. This plan has no bearing on the arrangements already made for the British competitive exhibitions in the various industrial sections. Estimated cost, \$300,000. The British California Association, San Francisco, is interested.

Foundations for Dam—Santa Barbara, Calif.—S. M. Kerns, 625 West Ocean Ave., Long Beach, Calif., was the lowest bidder at \$29,350 for the construction of the foundation for the 120-foot dam at Santa Barbara. The work will require approximately 950 cu.yd. of excavating rock on abutments, 6540 cu.yd. of material from the river bed, and placing 5635 cu.yd. of concrete. Noted May 28.

Princeton, N. J.—The Board of Trustees of Princeton University has accepted the plans prepared by Klauder & Day, Archts., for the proposed dormitory building. The structure is estimated to cost \$200,000.

Vauxhall, N. J.—The Board of Education has awarded the contract for the erection of a new school to EDWARD M. WALDRON & CO. at \$42,626. Noted Apr. 30.

Boyetown, Penn.—The contract for erecting the stone bank building for the National Bank has been awarded to FINE & SHIDEL, Reading at about \$40,000.

McKeesport, Penn.—Plans for the high school are being prepared by Vrydough & Wolf, Pittsburgh. The estimated cost is \$200,000.

Reading, Penn.—H. L. Stevens & Co., 519 Hammond Bldg., Detroit, Mich., is preparing plans for a seven-story and basement hotel, 75x105 ft. for the Perry Square Hotel Co. The estimated cost is \$450,000.

Ridley Park, Penn.—Plans are being prepared by Rankin, Kellogg & Crane, 1012 Walnut St., Philadelphia, for an addition for Ridley Park Presbyterian Church. The estimated cost is \$40,000.

Wilmington, Del.—The contract for building the addition to Delaware Hospital has been awarded by the Board of Trustees to the A. S. REED & BRO. CO., 815 Shipley St., at about \$60,000.

CONTRACT PRICE

Waterworks Improvements—Moline, Ill.—Bids were received May 12 by the Board of Local Improvements for the improvement of the water system in the East End Water Main District, from (A) Public Service Construction Co., Omaha, Neb.; (B) Dunnehan & Masters, Shenandoah, Iowa; (C) E. R. Harding Co., Racine, Wis.; (D) Gray-Robinson Construction Co., Manitowish, Wis.; (E) Moline Heating & Cooling Co., Moline, Ill.; (F) T. C. BROOKS SONS, Jackson, Mich.; (awarded contract); (G) Dearborn Construction Co., Waterloo, Iowa. The item bids were as follows:

The Sacramento Lodge of Eagles will erect a lodge building. The estimated cost is \$100,000.

San Francisco, Calif.—Edward T. Foulkes, Arch., Crocker Bldg., has completed plans for the erection of an exhibit building for the Canadian Pacific R.R. at the exposition.

Edward T. Foulkes, Arch., Crocker Bldg., is preparing plans for a number of concession buildings, which will include the "Creation," "The Monitor and the Merrimac," "Vicksburg" and "Narcis Palast."

Plans are being prepared by Edward G. Garden, Arch., Phelan Bldg., for the erection of a frame and plaster build-

ing at the Exposition for the Sperry Flour Co. The estimated cost is \$100,000.

Montreal, Que.—Plans are being prepared by Marius Dufresne, Ontario St., Maisonneuve, for the erection of a fire and police station for the Town Council of Maisonneuve. The estimated cost is \$70,000.

Niagara Falls, Ont.—Plans are being prepared by Bond & Smith, Archs., 15 Wilton Ave., for the erection of a store and office building at Queen and Ontario Sts., for the L. O. O. F.

Toronto, Ont.—A. A. Barthelme, Arch., and Frederick Courtemanche, both of Toronto, will erect a 10-story office building at Terauley and Albert Sts., Toronto. The estimated cost is \$300,000.

Toronto, Ont.—Bids will be received until 4 p.m., July 13, by R. C. Desrochers, Secy., Dept. of Public Works, for the erection of postal station E.

Winnipeg, Man.—The contract for the erection of an addition to St. Boniface hospital, has been awarded to J. H. TRAMBLEY CO., LTD., Winnipeg. The estimated cost is \$300,000.

Regina, Sask.—Bids will soon be received by Tripp & Reiley, Archs., 51 Canada Life Bldg., for the erection of a three-story theater, 50x125 ft., for W. Mine, 2267 Smith St. The estimated cost is \$65,000.

Red Deer, Alta.—Bids will be received until 4 p.m., July 15, by R. C. Desrochers, Secy., Dept. of Pub. Wks., Ottawa, Ont., for the erection of a public building at Red Deer, Alta.

Contracts to Be Let

Bids received until July 28, 1914.

Barge Canal Improvements

STATE OF NEW YORK
OFFICE OF SUPERINTENDENT OF PUBLIC WORKS
Albany, June 25th, 1914

NOTICE TO CONTRACTORS

Sealed proposals will be received by the undersigned at the Office of the Superintendent of Public Works, Albany, N. Y., until twelve o'clock P. M. of Tuesday, July 28th, 1914, at which place and hour the same will be publicly opened in order to award the contract for improving the New York State Canal pursuant to the provisions of Chapter 117 of the Laws of 1913 and of the amendments thereto, as follows:

1.
CONTRACT NO. 119
Erie Canal—Section 2

For furnishing and driving a quantity of steel sheet piling, extending the concrete apron and performing all incidental work connected therewith at Movable Dam Five at Rotterdam, N. Y.

—2—

CONTRACT NO. 120
Erie Canal—Sections 2 and 3

Reinforcement of the superstructure of the following seven movable dams over the Mohawk River:

Dam 5 at Rotterdam, Station 1862-15, Erie Canal
Dam 6 at Cranstonville, Station 1987-19, Erie Canal
Dam 7 at Amsterdam, Station 2201-16, Erie Canal
Dam 8 at Tribes Hill, Station 2313-17, Erie Canal
Dam 9 at Yosts, Station 2554-64, Erie Canal
Dam 10 at Fort Schuyler, Station 3170-50, Erie Canal
Dam 11 at Fort Plain, Station 3753-85, Erie Canal
Sections 2 and 3 inclusive

Plans may be seen and detailed specifications, engineer's estimate of quantities, proposal blanks, form of contract and other information for proposers may be had at the office of the Superintendent of Public Works at Albany, N. Y., at the office of the Assistant Superintendent of Public Works for the Middle Division at Syracuse, N. Y., at the office of the Assistant Superintendent of Public Works for the Western Division at Rochester, N. Y., and at the canal office at Schuylkill and Exton, Buffalo, N. Y.

Plans and detailed plans or drawings may be obtained from the Engineer and Surveyor at Albany, N. Y., upon payment by him of the cost of producing them.

Monthly estimation will be paid of ninety per centum on the value of the work done at the contract price. Every proposal for this work must be accompanied by a money deposit in the form of a draft or certified check upon some good banking institution in the City of Albany or New York (issued in full or on demand or payable on demand) within the State, available at call to the Superintendent of Public Works for ninety per centum of the amount of the proposed contract.

Sealed proposals, when proposed and accepted will be opened by the Assistant Engineer and furnish bonds within ten days after the date of award of the contract to him or to the Engineer or to the Board of Directors given in the proposal. The amount of the contract price, approval of bonds, the deposit and the draft will be returned to the proposer unless the contract is accepted. The amount of the deposit prior to the acceptance of the contract will be returned to the proposer. The amount of the deposit of the draft will be returned to the proposer. The amount of the deposit of the draft will be returned to the proposer. The amount of the deposit of the draft will be returned to the proposer.

Sealed proposals, when proposed and accepted will be opened by the Assistant Engineer and furnish bonds within ten days after the date of award of the contract to him or to the Engineer or to the Board of Directors given in the proposal. The amount of the contract price, approval of bonds, the deposit and the draft will be returned to the proposer unless the contract is accepted. The amount of the deposit prior to the acceptance of the contract will be returned to the proposer. The amount of the deposit of the draft will be returned to the proposer. The amount of the deposit of the draft will be returned to the proposer.

Each proposal must be addressed to the Superintendent of Public Works, Albany, N. Y., and must be endorsed on the envelope with the name of the construction for which the proposal is made.

Award, if made, will be made to the person or persons whose proposal shall be lowest in cost to the State for doing the work, and which shall comply with all provisions required to render it formal. Before any award shall be made the lowest bidder will be required to satisfy the Superintendent of Public Works of his ability to provide suitable equipment and materials for the proper performance of the work.

The right is reserved to reject all proposals and readvertise and award the contract in the regular manner if, in the judgment of the undersigned, the interests of the State will be enhanced thereby.

DUNCAN W. PECK,
Superintendent of Public Works.

✱

Bids received until July 20, 1914.

Sanitary Sewer, Special Manholes, Combined Sterilizing and Pumping Plant

Tarentum, Pa., June 27, 1914.

The Tarentum Borough Council will receive bids for the construction of approximately 1,000 ft. of 12 inch sanitary sewer ranging in depth from 3 ft to 26 ft. Also 15 special manholes and a combined sterilizing and pumping plant, as per the plans drawn by Leo Hudson, Consulting Engineer, 1210 House Bldg., Pittsburgh, Pa., up until July 20, 1914, at 7 o'clock P. M. The bids will be received on one or all of the three parts of the contract, viz Part I. Sewer and manholes. Part II. Structural work and treating plant with necessary piping, valves and mechanical equipment exclusive of the pumps and motors with their regulating devices. Part III. Motor driven centrifugal pumps. The motor driven centrifugal pumps may be bid separately, but completely installed by the firm furnishing said equipment on foundation prepared by the Borough. Each proposal is to be presented sealed and addressed to Mr. W. A. Gibson, Borough Secretary, and plainly marked on the lower left hand corner "Proposal for sanitary sewer and manholes" or proposal for any part or parts bid upon. In the upper left hand corner the name of the firm bidding is to be plainly written. Each proposal is to have enclosed a certified check or bidders' bond in amount equal to five (5) percent of the bid guaranteeing the good faith of the bidder. The successful bidder will be required to give bond for one hundred (100) percent of his bid for the faithful performance of the work. Plans and specifications may be obtained from the engineer.

Council reserves the right to reject any or all bids.
W. F. DENNY, President of Council.
W. A. GIBSON, Borough Secretary.
LEO HUDSON, Consulting Engineer,
1210 House Bldg.,
Pittsburgh, Pa.

† Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

THE HALF YEAR'S BUILDING RECORD

Recent reports from eight cities on the Pacific Coast complete the figures for the first half year's building operations in 59 of the largest cities. In June plans filed in these 59 cities called for an expenditure of \$71,546,000 compared with \$69,725,000 in the corresponding month in 1913. This is a gain for June of 2.6%, and is the first gain of any importance recorded this year. For the first six months plans filed called for an expenditure of \$367,171,000 compared with \$385,958,000 in the corresponding six months of last year. This loss of \$18,000,000 was scattered throughout the Eastern States in the first few months of the year and later in the Southern and Pacific Coast States. In the Middle West there has been almost a consistent gain throughout the six months. The decrease expressed in terms of percentage leaves 59 cities in the half year with 4.7%.

In eight cities on the Pacific Coast, the figures for which are given in the accompanying table, the contemplated building operations from plans filed in June aggregated \$6,030,000 compared with \$7,373,000 in June of 1913. This is a loss of 18.2%. In the first six months the loss was even greater in proportion, amounting to 17%. A large portion of this is due to the filing of building plans in Los Angeles in 1913 but for the first six months San Francisco shows an enormous gain.

RAILWAYS

West Virginia—Morgantown & Wheeling Ry.—This company plans to construct a line from Blacksville, W. Va., to Wheeling, W. Va., 55 miles. G. C. Sturgiss, Morgantown, W. Va., is interested.

Florida—See item under Alabama.

Florida—Bay City, Lynn Haven & Northern R.R. See item under Alabama.

Alabama—Alabama Great Southern R.R.—This company is asking for bids for second-track work from Birmingham, Ala., to Grassell, Ala., 6.4 miles; York, Ala., to Cuba, Ala., 5.45 miles; Meridian, Miss., to Russell, Miss., 6.63 miles. C. Dougherty, Cincinnati, Ohio, is Ch. Engr.

Louisville & Nashville R.R.—This company, it is reported, plans to construct an extension from Lexington, Ala., to Decatur, Ala., 14 miles. H. C. Williams, Louisville, Ky., is Engr. Const.

Alabama—The construction of a railroad from the coal fields of Alabama to the Atlantic Coast at Jacksonville, Fla., is under consideration. H. P. Reed, Birmingham, Ala., is interested.

Alabama—Bay City, Lynn Haven & Northern R.R.—This company is being organized by New York and Philadelphia capitalists for the purpose of constructing a railroad to connect Montgomery, Ala., and St. Andrews Bay, Fla. It is proposed to make the Birmingham, Columbus & St. Andrews Bay R.R. part of the route. This road is 38 miles long from Chipley, Fla., to St. Andrews Bay, and is now in the hands of a receiver. Construction immediately in prospect is from Chipley northward to Hartford, Ala., about 28 miles. From Hartford to Montgomery the projected route is via Enterprise and Troy, Ala. It is planned to build terminals at Southport, Fla., the southern end of the existing road, which will include docks, wharves and warehouses. A. D. Campbell, Chipley, Fla., is receiver of the B. C. & St. Andrews Bay R.R. Noted July 9.

Alabama Great Southern R.R.—This company plans improvements at Tuscaloosa to include track extension and depression. C. Dougherty, Cincinnati, Ohio, is Ch. Engr.

Mississippi—Nashville, Shiloh & Corinth R.R.—See item under Tennessee.

Mississippi—Alabama Great Southern R.R.—See item under Alabama.

Mississippi—Columbus Lumber Co.—This company plans to construct a railroad from Columbus, Miss., to Winfield, La. The line will pass through timber lands in Western Alabama recently purchased by the company. The offices of the company are located at Columbus, Miss.

Louisiana—Columbus Lumber Co.—See item under Mississippi.

Tennessee—Nashville, Shiloh & Corinth R.R.—The citizens of Centerville, Tenn., have voted in favor of issuing bonds for \$150,000 to aid this company to construct its proposed line from Nashville, Tenn., to Corinth, Miss. C. C. Thoms, Corinth, Miss., is interested.

Tennessee—Southern Ry.—This company, it is reported, is having surveys made for its proposed cut-off from Bulls Gap, Tenn., to either Newport or Leadvale, Tenn., 20 miles. W. H. Wells, Washington, D. C., is Ch. Engr. Const.

Kentucky—Paducah & Illinois R.R.—This company is making surveys for its proposed railroad from Paducah, Ky., to the site of the proposed bridge over the Ohio River at Metropolis, Ill. Charles Broadbeck, Paducah, is Ch. Engr.

Michigan—Lansing Connecting R.R.—This company has been incorporated to construct a railroad. G. E. Hutchinson, Lansing, is Secy.

Illinois—Paducah & Illinois R.R.—See item under Kentucky.

Wisconsin—Balsam Lake & Eastern R.R.—This company has been incorporated for the purpose of constructing a railroad from Balsam Lake, Wis., to Centuria, Wis., eight miles. Capital, \$100,000. Among the incorporators are W. R. Taylor, J. W. Park and H. W. Radcliffe.

Missouri—Missouri Pacific R.R.—See item under Oklahoma.

Nebraska—Chicago, Burlington & Quincy R.R.—This company has awarded the contract to PETERSEN & CO., Omaha, Neb., for the construction of its proposed cut-off from Yutan, Neb., southeast to Chalco, Neb. The work calls for a 300-ft. trestle over the Elkhorn River and a 1700-ft. trestle over the Platte River. Noted June 3.

Missouri—Rolla, Ozark & Southern R.R.—This company has awarded the contract to J. E. WALKER, Rolla, Mo., for constructing its proposed line from Rolla to Annett, Mo., 18 miles. Noted July 2.

Missouri—Kansas City, Mexico & Orient Ry.—A committee representing the bondholders of this company purchased the line, July 6, for \$6,000,000. The receivership will end Sept. 1 and the road will be completed. William T. Kemper, of Kansas City, Mo., is among those interested.

Texas—Gulf, Colorado & Santa Fe Ry.—This company has taken over the Concho, San Saba & Llano Valley R.R. the Texas & Gulf R.R., the Gulf & Interstate R.R. and the division of the Pecos & Northern Texas Ry. south of Sweetwater, Tex. F. Merritt, Galveston, Texas, is Ch. Engr.

Oklahoma—Missouri Pacific R.R.—The city of Buffalo, Okla., has voted to issue \$100,000 in bonds to secure the extension of this company's line from Hardtner, Kan., to Buffalo. J. R. Stephens, St. Louis, Mo., is Ch. Engr.

Oklahoma—Clinton, Oklahoma & Western Ry.—This company has been taken over, it is reported, by Frank Kell, Wichita Falls, Tex., who plans to construct extensions. The line is 52 miles long and runs from Clinton, Okla., to Strong City, Okla.

Idaho—Intermountain P.R.—This company has awarded a contract to the OREGON BRIDGE & CONSTRUCTION CO., for constructing a portion of its proposed line in the Boise Basin. The company is a subsidiary of the Boise-Payette Lumber Co. Noted Apr. 16.

Washington—Northern Pacific Ry.—This company plans to construct a freight yard to have 15 tracks, at the head of Commencement Bay, Tacoma, Wash. Estimated cost, \$197,000. W. L. Darling, St. Paul, Minn., is Ch. Engr.

Washington—Northern Pacific Ry.—This company will spend \$375,000 for track improvements in Tacoma, Wash.

British Columbia—Canadian Northern Ry.—This company will start work this month on its Kamloops-Okanogan branch, in British Columbia. Length, about 148 miles. W. H. Campbell, Montreal, is Gen. Engr. and Ch. Engr.

Canadian Pacific Ry.—The Provincial Department of Railways has approved the plans of this company, providing for a further extension of its line on Vancouver Island, to Duncan Bay. R. B. Peters, Vancouver, B. C., is Supt. British Columbia Division.

ELECTRIC RAILWAYS

Elizabeth, N. J.—The Board of Trade is considering the establishment of an electric railway to connect Elizabeth, Rahway and Linden.

Grandville, Penn.—The Schuylkill Ry. Co. contemplates the extension of its lines into Delano and Lakeside. William S. Leiby, Grandville, is Gen. Mgr.

Kane, Penn.—Plans are being prepared for the construction of an electric railway from Kane to St. Mary's, Johnsbury and Ridgway, about 33 miles.

Rock Hill, S. C.—The Carolina Traction Co. is preparing to extend its line on Elm, Park and Crawford Sts. in Rock Hill. James S. White, Rock Hill, is Secy. and Mgr.

Albany, Ga.—The Albany Transit Co. contemplates the construction of a one-mile extension to its line. J. C. Fulford, Albany, is Secy. and Pur. Agt.

Savannah, Ga.—The City Council has granted a franchise to the Savannah Electric Co. to extend its line on Habersham St. to connect with the line at Chatham Crescent. A. L. P. Smith, Savannah, is Pur. Agt. Noted July 2.

Columbus, Miss.—The Mississippi Electric Ry. Co. has been incorporated to build an electric line from Columbus, Miss., to Memphis, Tenn. C. F. Sherrod, Columbus, is interested.

Port Smith, Ark.—The City Commissioners have instructed the City Electrician to prepare an estimate of the cost of constructing a municipal electric-light plant.

Meana, Ark.—The Century Engineering & Construction Co. is preparing plans for the installation of an electric-light plant in Meana.

Brenham, Tex.—J. J. Campbell and associates will extend their gas distributing system here and make other improvements to the plant.

Cisco, Tex.—The Cisco Gas & Electric Co. which has been organized here with a capital stock of \$50,000 will construct an electric-light and power plant at Cisco. The incorporators are W. S. Michael, W. H. Tebbis and G. G. Ward.

Henrietta, Tex.—The Lone Star Gas Co., Fort Worth has increased its capital stock from \$3,500,000 to \$4,500,000 in order to provide funds for constructing a large gas compressor at Henrietta.

Marble Falls, Tex.—The proposition to issue bonds for the construction of a municipal electric-light plant and a waterworks system will soon be submitted to a vote of the taxpayers.

Mexia, Tex.—The Mexia Water, Light & Power Co. has awarded the contract for the construction of a new power plant to CARL KAHL. It is planned to spend about \$25,000 in improvements.

Temple, Tex.—The Texas Power & Light Co. will install new machinery and make other improvements to its electric power plant at Temple. E. S. Fletcher, Temple, is Local Mgr.

Lordsburg, N. M.—The Eighty-five Mining Co. is constructing a new power plant at its mine near Lordsburg.

Monroe, Wash.—The plant and franchise of the Monroe Water & Light Co. has been taken over by the Monroe Water Co., Seattle. Considerable improvements and extensions will be made to the plant. Sidney Marshall, Monroe, is Pres. and Gen. Mgr. of the new firm.

Santa Paula, Calif.—The State Railroad Commission has granted permission to the Ojai Power Co. to issue capital stock to the extent of \$19,200 for improvements to the power plant. The proceeds are to be used for the purchase of additional equipment to cost \$10,000, while \$2,000 will be expended on extensions and betterments, and \$2,000 used for the erection of new buildings.

EXPANSION OF THE ELECTRICAL INDUSTRY

The present estimates are that \$1,200,000,000 per annum, or \$4,000,000 per working day, will be required to meet the increasing business of the gas, electric light and traction business of the United States, says W. H. Gardner, of Henry L. Doherty & Co., New York, according to the Journal of Commerce, who adds:

"The public regulation of public utilities and common carriers by state commissions has grown to an extent perhaps not generally realized. In 15 states there are public service commissions having full jurisdiction over all utilities. In eight other states these commissions have full jurisdiction, except as to capitalization. In eight other states they have limited jurisdiction over railroads and some city utilities. In twelve other states they have supervision of carriers and of some telephone and telegraph companies, leaving only two states—Utah and Wyoming—without as yet any established form of state regulation of public utilities and carriers."

"For thirty-odd years the most plenipotentiary commission has existed in Massachusetts."

The fundamental duties of the plenipotentiary public service commission are threefold, the impartial supervision and regulation of the public service corporations in all matters affecting the good of their present or prospective customers, the supervision in such matters of the interests of investors in public utility securities, and the sound and proper guidance of public opinion, through published reports and otherwise, of the real conditions affecting public service corporations."

"As each new commission has been inaugurated, the first above mentioned consideration has usually been most prominently in mind, but as each new commission gets deeper and deeper into its work, it realizes that it will, in hitherto unappreciated ways the ultimate interests of the public served, and of the public service corporation, are parallel, if not identical, instead of being antagonistic."

"For instance, the demand on the part of the public for additional public service, such as gas, electric light and power, traction, etc., has more than doubled in this country during the past decade, and those most intimately conversant with the business expect that it will more than double on its present volume during the coming decade. But when the public demands more service, it means that more plant and distributing lines have not to be provided to furnish that service. This means that additional capital has got to be induced to invest in the business to furnish this additional equipment."

"The deepest students of the public utility situation today recognize that probably its most important problem is that of obtaining this additional capital at as reasonable terms as possible. For the gas, electric light and traction business of the United States the present estimate is that this additional capital required amounts to about \$1,200,000,000 per annum, or \$4,000,000 per working day of new capital required during the next five years; incidentally, an amount equal to or greater than that of the new capital requirements of all the railroads of the United States."

"The more advanced public service commissions and other students of this situation have for some time recognized that it is vastly more important the interest of the public that the public service corporations get this additional capital required at as reasonable interest rates as possible than that the present rates for gas or electric light or traction service be reduced to their bare bone minimum, or that the capital situation of any public utility be standardized on any particular academic par value basis. They recognize this because they have imagination enough to realize that a tremendous public calamity it could be if the public utility companies were not able, because of drastic public regulation, to get any of this additional capital required to meet the growing demand for service."

"What, for instance, would it mean to the country if from now on no new building could be furnished with electric light, and no new suburb could be served with new electric railways? Such a failure would be a vastly greater public loss than any present immediate public gain by a reduction of 5, 10 or 15% in the present rates for public service. In conclusion, it is obvious that a business which during the past decade has doubled its volume or grown twice as fast as the railroad business of the country has a business which has maintained its earnings and dividends during the recent years of general depression, and which has such prospects of additional public demands for additional public service is not only in a healthy financial condition, but is in the peculiar condition where the interests of the public in the immediate future will be best served by the continuance of this reasonable business prosperity, enabling the public utilities to get the necessary moneys to keep their facilities up to public demands."

◆**Aerial Tramway**—A Spanish company, incorporated at Bilbao, Spain, with Canadian headquarters in Toronto, has obtained concessions from the Niagara Falls Power Commission to construct and operate an aerial tramway across the whole of the Niagara River, from the Canadian shore to the American shore. The line will be 1180 ft. the longest of its kind in the world, and will be utilized for passenger traffic. The car will be suspended by six huge cables. The company already operates a similar tramway at San Sebastian, Spain.

DYKE, WINNIPEG, MAN.

Greater Winnipeg Water District

Contracts to Be Let

Bids received until July 28, 1914.

Barge Canal Improvements

STATE OF NEW YORK
OFFICE OF SUPERINTENDENT OF PUBLIC WORKS
Albany, June 28th, 1914.

NOTICE TO CONTRACTORS—

Sealed proposals will be received by the undersigned at his office in the Capitol at Albany, N. Y., until twelve o'clock noon of Tuesday, July 28th, 1914, at which place and hour they will be publicly opened and read, for improving the New York State canal pursuant to the provisions of Chapter 147 of the Laws of 1903, and of the amendments thereto, as follows:

—1—

CONTRACT NO. 115
Erie Canal—Section 2

For furnishing and driving a quantity of steel sheet piling, extending the concrete apron and performing all incidental work connected therewith at Movable Dam Five at Rotterdam, N. Y.

Sheets 1 and 2

—2—

CONTRACT NO. 120
Erie Canal—Sections 2 and 3.

Reinforcement of the superstructures of the following seven movable dams over the Mohawk River:

- Dam 5 at Rotterdam, Station 1662 + 45, Erie canal.
- Dam 6 at Craneyville, Station 1947 + 79, Erie canal.
- Dam 7 at Amsterdam, Station 2201 + 46, Erie canal.
- Dam 8 at Tribes Hill, Station 2413 + 17, Erie canal.
- Dam 9 at Yosts, Station 2954 + 64, Erie canal.
- Dam 10 at Canajoharie, Station 3370 + 50, Erie canal.
- Dam 11 at Fort Plain, Station 3553 + 95, Erie canal.

Sheets 1 to 15 inclusive

Plans may be seen and detailed specifications, engineer's estimate of quantities, proposal blanks, form of contract and bonds required and other information for proposers may be had at the office of the Superintendent of Public Works at Albany, N. Y., at the office of the Assistant Superintendent of Public Works for the Middle Division at Syracuse, N. Y., at the office of the Assistant Superintendent of Public Works for the Western Division at Rochester, N. Y., and at the canal office, Spaulding's Exchange, Buffalo, N. Y.

Copies of detailed plans or drawings may be obtained from the State Engineer and Surveyor at Albany, N. Y., upon payment to him of the cost of producing them.

Monthly estimates will be paid of ninety per centum (90 per cent) of the work done at the contract price. Every proposal for said work must be accompanied by a money deposit in the form of a draft or certified check upon some good banking institution in the City of Albany or New York, issued by a national or State bank in good credit within the state and payable at sight to the Superintendent of Public Works for 5 per centum (5 per cent) of the amount of the proposal.

The person whose proposal shall be accepted will be required to execute a contract and furnish bonds within ten days from the date of notice of award delivered to him or to some person or mailed to the address given in the proposal.

Upon receipt of the contract and approval of bonds, the money deposit shall be returned to the proposer unless the same shall have been presented for collection prior to which time it shall be used as the amount of the deposit will be retained by the Superintendent of Public Works.

The Superintendent will select other than the one to whom the award is made, if the same will be returned immediately after the award is made.

The person whose proposal shall be accepted for faithful performance will be required to furnish a money deposit of the amount of the estimated cost of the work, less 5 per cent of the contract price, and an additional 10 per cent of the amount of the estimated cost of the work, less 5 per cent of the contract price, will be retained as a security for the faithful performance of the contract. The money deposit will be paid in full at least one month after the completion of the work by him upon the work is completed and the contract is accepted.

In the event that more than one surety company is offered as security for the bonds, the one which will be accepted

Each proposal must be addressed to the Superintendent of Public Works, Albany, N. Y., and must be endorsed on the envelope with the name of the construction for which the proposal is made.

Award, if made, will be made to the person or persons whose proposal shall be lowest in cost to the State for doing the work, and which shall comply with all provisions required to render it formal. Before any award shall be made the lowest bidder will be required to satisfy the Superintendent of Public Works of his ability to provide suitable equipment and materials for the proper performance of the work.

The right is reserved to reject all proposals and reawards and award the contract in the regular manner if, in the judgment of the undersigned, the interests of the State will be enhanced thereby.

DUNCAN W. PECK,
Superintendent of Public Works.

Bids received until Aug. 8, 1914.

Power House, etc.

NOTICE TO CONTRACTORS.—Sealed proposals for construction of Power House, including boiler plant piping and conduits, plumbing and electric work; construction, heating, plumbing and electric work for five cottages and dormitory; sewerage and sewage disposal plant and water supply works, for the New York State School of Agriculture on Long Island near Farmingdale, N. Y., will be received by Dr. Franklin W. Hooper, Secretary of the Board of Trustees, 30 Lafayette Avenue, Brooklyn, N. Y., until 10 o'clock a. m. on Saturday, August 8, 1914, when they will be opened and read publicly. Bids will be received for each division of the work separately and no combination of bids will be considered. Proposals shall be submitted on the blank form and in sealed envelope addressed to the Secretary, furnished by the State Architect. This envelope shall also contain certified check in the sum of 5% of the amount of bid. Each contractor to whom an award is made will be required to furnish surety company bond in the sum of 50% of the amount of contract within thirty (30) days after official notice of award of contract and in accordance with the terms of specifications Nos. 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919 and 1920. The right is reserved to reject any or all bids. Drawings and specifications may be consulted and blank forms of proposal obtained at the office of Dr. Franklin W. Hooper, 30 Lafayette Avenue, Brooklyn, N. Y., at the office of Mr. A. A. Johnson, Director, Farmingdale, N. Y., and at the office of the State Architect. In applying for plans and specifications, each bidder must state which part of the work, such as construction, heating, plumbing and electric work, he intends to bid. On and after July 14, 1914, drawings and specifications and blank forms of proposal may be obtained at the office of the State Architect upon deposit of a certified check for cash in the sum of ten dollars (\$10.00), made payable to the State of New York, for each part of the work, which check or cash will be returned if plans and specifications are sent back in good order to the State Architect.

LEWIS F. PILBACHER, State Architect.

Construction News

★Denotes work advertised in ENGINEERING NEWS.

†Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

MORE TANGIBLE THAN "SUNSHINE"

Exceedingly optimistic is a circular letter sent out by J. G. White Engineering Corporation to the heads of public service corporations. The letter says in part:

"We believe that for some time past the design and construction of many projects have been deferred because of a feeling that general business conditions did not warrant proceeding actively with them."

"But it is well worth considering, particularly at this time, the more important prospects of the immediate future: 'We are apparently assured of a splendid crop return.'"

"It is announced that before the close of the present Congressional session the Federal legislative programme for stabilizing business will have been completed."

"It is generally conceded that currency reform was of manifold benefit and that its effects should promptly follow the organization period of the Federal Reserve Board."

"The possibility of war with Mexico seems daily to become more remote."

"These considerations lead obviously to the conclusion that the general outlook is decidedly favorable."

"With this in mind we believed that it would be well to secure the advantages of present market conditions and apply them to construction projects which have been under previous consideration. We are convinced that the price of materials and of labor is much lower today than can reasonably be expected when business activity is quickened."

"The belt just now is an exceptionally opportune time to go ahead with many deferred construction projects. If the work is new development there is a distinct advantage to be gained from being prepared to supply demand as soon as it occurs. Instead of fear on when the market may be 'stale' or else unprofitably competitive. If the work is extension or rehabilitation there should be prompt willingness under normal business conditions to furnish added or better service."

ADVANCING PRICES

The American Steel & Wire Co. advanced prices on wire products \$1 per ton July 20. Several of the independent manufacturers already followed with similar advances. Cement prices are 5c. per bbl. higher in the Middle West. The new prices per barrel in bulk are as follows: Chicago, \$1.17; Minneapolis, \$1.40; Pittsburgh, \$1.15; Duluth, \$1.38; Detroit, \$1.24; St. Paul, \$1.40; Cleveland, \$1.35.

RAILWAYS

Pennsylvania—Pennsylvania R.R.—This company plans to eliminate its tracks in West Chester, Wilmington and Edgewood, Penn. A. C. Shand, Philadelphia, Penn., is Ch. Engr.

Pennsylvania—Pittsburgh & Eastern R.R.—This company, it is reported, plans to construct its proposed extension from Towanda, Penn., to Oregon Hill, Penn. The offices of the company are located at Pittsburgh.

†**Virginia**—Southern Ry.—This company has awarded the contract to ROBERT RUSSELL, Danville, Va., for constructing its proposed double-track line between Danville and Dry Fork, Va. The work calls for a bridge across Dan River.

South Carolina—The Chamber of Commerce of Rock Hill, S. C., is interested in the construction of a railroad from Rock Hill to connect with the Seaboard Air Line Ry. C. W. Roberts is Secy.

Georgia—Register & Glenville R.R.—This company is having surveys made for its proposed extension to Statesboro, Ga. B. K. Williamson, Hazen, Ga., is Supt.

Georgia—Moultrie Southwestern Ry.—This company has applied for a charter to construct a line from Moultrie, Ga., southwest to the Florida state line. It will pass through Colquitt, Mitchell, Grady and Decatur Counties. W. E. Aycock, Moultrie, is interested.

Florida—Atlantic Coast Line R.R.—This company plans to extend its Carpenter-O'Brien Branch to Port George Island, E. B. Pleasant, Wilmington, N. C., is Ch. Engr.

Florida—Export Phosphate Ry. & Terminal Co.—This company has been organized to construct a railway 50 miles long from the plant of the Export Phosphate Co., at Mulberry, Fla., to a phosphate drying plant near Tampa, Fla.

Florida—See item under Miscellaneous: Dock and Railroad Bonds—Pensacola, Fla.

Alabama—Illinois Central R.R.—This company is having surveys made for its proposed extension from Jackson, Miss., to Birmingham, Ala., about 200 miles. A. S. Baldwin, Chicago, Ill., is Ch. Engr.

Mississippi—Illinois Central R.R.—See item under Alabama.

Kentucky—Chesapeake & Ohio Ry.—This company has filed amended articles of incorporation providing for an extension from a point in Kentucky opposite Wheelersburg, Seloto County, Ohio, through the state of Ohio for a distance of 95 miles. The general office of the company is in Richmond, Va. F. L. Cabell is Ch. Engr.

Ohio—Chesapeake & Ohio Ry.—See item under Kentucky.

Wisconsin—Chicago & Northwestern Ry.—This company, it is reported, plans to construct an extension from Kolenick, Wis., to Pearson, Wis. E. C. Carter, Chicago, Ill., is Ch. Engr.

Montana—Chicago, Milwaukee & St. Paul Ry.—This company plans to construct an extension soon from Great Falls, Mont., through the Cœur d'Alene District. C. F. Laneth, Chicago, Ill., is Ch. Engr.

†**Montana**—Great Northern Ry.—This company has awarded the contract to GUTHRIE, McDUGALL & CO., Portland, Ore., for work at Paola, Mont., to cost \$250,000.

Missouri—Surveys are being made for the proposed railroad from Epine, Mo., to Mountain Home, Ark., about 100 miles. E. C. McAfee, Springfield, is interested.

Texas—Bartlett Western Ry.—This company plans to improve its lines. T. E. Fowler, Bartlett, Tex., is Ch. Engr.

Texas—Delta Land & Lumber Co.—This company plans to construct a railroad 15 miles long from Conroe, Tex., to its timber lands. I. H. Petty, Kansas City, Mo., is Gen. Mgr.

Texas—A standard gage railroad will be constructed between Brownsville, Tex., and Point Isabel, Tex. The Southwestern Engineering Co., Gunter Bldg., San Antonio, Tex., is in charge of the engineering work.

Texas—San Antonio, Uvalde & Gulf R.R.—The State Railroad Commission, July 10, approved an issue by this company of \$750,000 in bonds for proposed extensions. E. R. Braker, San Antonio, Tex., is Ch. Engr.

Oklahoma—Clinton, Oklahoma & Western Ry.—This company, it is reported, purchased by Frank Bell, Wichita Falls, Tex. It is reported that an extension will be built to Chickasha.

Arizona—Mascott & Western Ry.—This company has been incorporated for the purpose of constructing an 18-mile railroad from Wilcox, Ariz., to the mines of the Mascott Copper Co. at Dos Cabezas. The incorporators are F. N. McCaulder, D. S. Stevenson, Chas. V. Weston, J. A. Street, J. C. Knapp, C. M. Stoddard and M. A. Pickett, all of whom are identified with the Mascott Copper Co.

Oregon—Sutherland, Coos Bay & Eastern Ry.—Contracts will probably be awarded soon by this company for constructing its proposed line from Sutherland, Ore., east to the head of Calapooia River, about 27 miles. H. D. Haley, Sutherland, Ore., is Engr.-in-Charge.

East Oregon—Lumber Co.—This company is having surveys made for its proposed railroad from Enterprise, Ore., north. J. C. Edsall, Enterprise, is Engr.-in-Charge.

California—Pacific Co.—This company plans to reballast its line from Port of Ore., to Springfield Junction, Ore. Estimated cost, about \$150,000. W. Hood, San Francisco, Calif., is Ch. Engr.

California—Yosemite Valley R.R.—This company, operating 78 miles of railroad, plans to repair its roadbed. G. H. Nickerson, Merced, Calif., is Ch. Engr.

California—Richmond Belt Ry.—This company has filed articles of incorporation at Martinez, Calif. The company plans to construct a line from San Pablo Wharf to Richmond, Calif. Capital, \$500,000. The directors are W. S. Terris, Clinton Warden, H. A. Wakefield, J. V. de Lavenne and Horace Pillsbury.

ELECTRIC RAILWAYS

Augusta, Maine—The Lewiston, Augusta & Waterville Street Ry. Co. plans to extend its lines in Augusta. Harry B. Ivers, Portland, is Gen. Mgr. and Pur. Act.

Worcester, Mass.—Plans are being considered by the Worcester Consolidated Street Ry. Co. for the extension of its Junction line and for relocating its tracks on Pleasant St. H. C. Page, Worcester, is Gen. Mgr.

†**Middle, Conn.**—The Waterbury & Middlebury Tramway Co. has awarded a contract to CHARLES A. BIANCI, South Framingham, Mass., for the grading and track laying on the final section of five miles from Hitchcock's Lake to Middlebury. John H. Cassidy, 144 Bank St., Waterbury, is Secy. and Gen. Mgr. William G. Smith, 51 Leavenworth St., Waterbury, is Const. Engr. Noted Aug. 7, 1913, and Feb. 5, 1914.

New York, N. Y.—The Union Ry. Co. has purchased franchises for the construction of an electric railway from City Island Station to Helden Point. The company plans to start work at once. James Carrigan, Boston Road and 176th St., is Gen. Supt.

Port Jervis, N. Y.—Preliminary steps are being taken by the Port Jervis Light & Power Co. for the establishment of an electric railway from Port Jervis, N. Y., to Delaware Water Gap, Penn. D. R. Thomas, Port Jervis, is Vice-Pres. and Gen. Mgr.

New Castle, Penn.—The City Council has granted a franchise to the New Castle Electric Street Ry. Co. to extend some of its lines in New Castle.

New Hope, Penn.—The Bucks County Interurban Ry. Co. is making surveys for the extension of its system on North Main St., Layford Thompson, Trenton, N. J., is Vice-Pres. and Gen. Mgr. Noted May 28.

Wilmington, Del.—Plans are being prepared by the Wilmington & Philadelphia Traction Co. for the extension of

W. A. Hinkle, Jr., is in charge of the project. The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Bennett, N. H.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Blacksville, W. Va.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Morgantown, W. Va.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Akron, Ohio—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Cleveland, Ohio—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Sandusky, Ohio—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Polish, Ohio—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Youngstown, Ohio—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Ellettsville, Ind.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Lansing, Mich.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Chicago, Ill.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Omaha, Neb.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Madison, Wis.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Mitchell, S. D.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Mandan, N. D.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Williston, N. D.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Dallas, Tex.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

San Marcos, Tex.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Port Townsend, Wash.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

South Bend, Wash.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Hinday, Calif.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

San Diego, Calif.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Pomona, Calif.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Sacramento, Calif.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Stockton, Calif.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Los Angeles, Calif.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

LIGHT, HEAT AND POWER

Amherst, Mass.—The project is to build a new power plant at the site of the old plant, which was destroyed by fire in 1914. The new plant will have a capacity of 10,000 kw. and will be built at a cost of \$1,000,000. The project is being financed by the State of Ohio and the City of Akron.

Hartford, Conn.—Bids were received by the State Highway Commission, July 14, as follows:

Westport Township, about 5840 lin. ft. warrenite (a), amiesite (b), plain concrete (c), reinforced concrete (d) or hansom (e) pavement on the "Old Highway"—Warren Bros. Co., Boston, Mass., (a) \$29,710; Charles T. Eastburn Co., Mount Vernon, N. Y., (a) \$30,001; Louis Longhi & Bro., Torrington, (a) \$29,826; (c) \$21,038; Connecticut Hazzam Paving Co., New Haven, (c) \$20,159; B. D. Pierce Jr., Co., Bridgeport, (c) \$20,583, (d) \$21,674; A. D. Bridge's Sons, Inc., Hazardville, (c) \$20,646, (d) \$21,056. No guarantee in the last bid.) City of Hartford, about 4050 lin. ft. warrenite (a), amiesite (b), plain concrete (c), reinforced concrete (d) or hansom (e) pavement on Winfield St.—Warren Bros. Co., Boston, Mass., (a) \$18,026; Charles T. Eastburn Co., Meriden, (b) \$17,820; Louis Longhi & Bro., Torrington, (c) \$17,800; Connecticut Hazzam Paving Co., New Haven, (c) \$11,734; B. D. Pierce Jr. Co., Bridgeport, (c) \$12,535, (d) \$13,292; A. D. Bridge's Sons, Inc., Hazardville, (c) \$12,303, (d) \$12,583. (No guarantee in the Bridge's bid.)

Huntington Township, about 5750 lin. ft. native stone macadam (a) or gravel (b) construction on the Huntington Center Road—H. Sanford Osborn, Redding Ridge, (a) \$13,134, (b) \$7817; John Arboret, New Haven, (a) \$13,134, (b) \$7611; Bennett N. Beard Co., Shelton, (a) \$10,873, (b) \$971; B. D. Pierce Jr. Co., Bridgeport, (a) \$12,128, (b) \$9309; Louis Longhi & Bro., Litchfield, (a) \$10,899, (b) \$8050; Goodman & Trumbull Co., Litchfield, (a) \$11,314; John de Michel & Bro., Torrington, (a) \$11,866, (b) \$8090; A. Brazos & Sons, Middletown, (a) \$13,156; Elbert N. Clarke, Milford, (a) \$16,653, (b) \$12,892. Also about 6750 lin. ft. trap rock macadam (a), native stone gravel (c) construction on the River Road—A. Brazos Sons, Middletown, (b) \$15,798; John Arboret, New Haven, (a) \$11,812, (b) \$11,979, (c) \$9749; Bennett N. Beard Co., Shelton, (a) \$12,001, (b) \$13,291, (c) \$10,806; Goodman & Trumbull Co., Litchfield, (a) \$11,812, (b) \$15,000; H. Sanford Osborn, Redding Ridge, (a) \$13,321, (b) \$15,306, (c) \$11,374; Olin T. Benedict, Pittsfield, Mass., (a) \$12,212, (b) \$13,494; John de Michel & Bro., Torrington, (a) \$14,473, (b) \$13,378; Elbert N. Clarke, Milford, (a) \$13,494, (b) \$10,459, (c) \$16,764; Louis Longhi & Bro., Torrington, (a) \$12,549, (b) \$12,909, (c) \$11,209; B. D. Pierce Jr. Co., Bridgeport, (a) \$14,557, (b) \$11,555.

City of Bridgeport and Fairfield Township, about 2335 lin. ft. amiesite (a), warrenite (b), bituminous concrete (c), or asphalt (d) pavement on Brooklawn Ave.—Charles T. Eastburn Co., Mount Vernon, N. Y., (a) \$11,215; Warren Bros. Co., Boston, Mass., (b) \$10,317, (c) \$10,988, (d) \$10,719. Cornwall and Goshen Townships, about 10,150 lin. ft. of native stone macadam (a), 13,550 lin. ft. resurfacing (b) and 2700 tons trap rock in piles (c) on the turnpike—John de Michel & Bro., Torrington, (a) \$14,218, (b) \$1553, (c) \$4065; Goodman & Trumbull Co., Litchfield, (a) \$18,123, (b) \$6097, (c) \$3794; A. B. Cadwell, New Britain, (a) \$19,814; Pocaro Construction Co., Willimantic, (a) \$13,145, (b) \$2574, (c) \$219; Kellough & Gregory Co., Danbury, (a) \$16,030, (b) \$2013, (c) \$4065; Caesar A. Rossi, Torrington, (a) \$15,000, (b) \$5962, (c) \$4065; Louis Longhi & Bro., Torrington, (a) \$14,962, (b) \$7723, (c) \$5555; Blacco & Co., Stockbridge, Mass., (a) \$16,939, (b) \$3333, (c) \$2565; A. Brazos & Sons, Middletown, (c) \$23,010, (b) \$5962, (c) \$4065; J. E. Grelner, Fidelity Bldg., Baltimore, Md., is Consult. Engr.

† Norwalk, Conn.—(Official)—Bids will be received until 2 p.m., Aug. 5, by the Secretary of the Bridge Construction Committee, People's Trust Co. Bldg., for paving the Washington St. Bridge and its approaches with vitrified brick or wood block. A. P. Beard is Chm. of the Bridge Com. E. Grelner, Fidelity Bldg., Baltimore, Md., is Consult. Engr.

Norwalk, Calif.—Plans are being prepared by George B. McDougall, State Arch., Sacramento, for the erection of the State Hospital for the Insane at Norwalk. The estimated cost is \$160,000.

San Fernando, Calif.—Austin & Pennell, Archs., Wright & Callender Bldg., are completing plans for the erection of the school at San Fernando. It will be a one-story and basement, 176x78-ft. structure. The estimated cost is \$50,000.

Stockton, Calif.—Bids will be received until noon, July 28, by W. F. McClure, State Engr., Capitol Bldg., for the erection of dairy buildings at the State Hospital at Stockton.

Santa Cruz, Calif.—Bids were received for constructing the Santa Cruz school as follows: R. O. Summers, \$51,872; William D. Os and Henderson, \$46,162; Boyd, Kerr & McLean, \$50,604; Schenck, Rostrawer & Pedrick, \$53,524; Sound Engineering & Construction Co., \$52,000; H. A. Klyce, \$45,300; Graham & Jensen, \$19,522; Peterson & Wilson, \$43,000, plus 4% on all sub-contracts not awarded to them, which will bring their bid to approximately \$43,500.

Van Nuys, Calif.—Allison & Allison, Archs., Hibernian Bldg., are completing plans for the erection of a high school at Van Nuys. The estimated cost is \$150,000.

Ventura, Calif.—Plans are being prepared by George B. McDougall, State Arch., for the erection of the State Reform School for Girls. The construction will be of frame and plaster. The estimated cost is \$75,000.

Toronto, Ont.—The Toronto Terminals Ry. Co. has awarded the contract for the erection of the union passenger station at Toronto to the FREDERICK LALL CO., Montreal, Que. The estimated cost is \$3,000,000.

Elkhorn, Minn.—Bids will be received until 4 p.m., July 31, by H. E. Matthews, Lindsay Bldg., Winnipeg, Man., for the erection of a public building at Oak Lake.

Oak Lake, Man.—Bids will be received until Aug. 4, by R. C. Osbrochers, Secy., Dept. of Pub. Wks., for the erection of a public building at Oak Lake.

Winnipeg, Man.—V. W. Horwood, Arch., 261 Frost St., has prepared plans for the erection of an engineering building for the University of Manitoba. The estimated cost is \$250,000.

Qu'Appelle, Sask.—Bids will be received by the Director of Contracts, Dept. of Militia & Defense, Ottawa, Ont., for constructing a drill building at Qu'Appelle, Sask.

Edmonton, Alta.—The contract for the erection of the addition to the Royal Alexandra Hospital has been awarded to OLSEN & JOHNSON CO., Missoula, Mont. The estimated cost is \$175,000.

Contracts to Be Let

Bids received until July 28, 1914

Barge Canal Improvements

STATE OF NEW YORK
OFFICE OF SUPERINTENDENT OF PUBLIC WORKS
Albany, June 29th, 1914

NOTICE TO CONTRACTORS.—Sealed proposals will be received by the undersigned at 10:00 a. m. to the effect of the undersigned at Albany, N. Y., until twelve o'clock p. m. of Tuesday, July 28th, 1914, at which place and hour they will be publicly opened and read for improving the New York State Barge Canal pursuant to the provisions of Chapter 147 of the Laws of 1913 and of the amendments thereto, as follows:

1.
CONTRACT No. 119
Erie Canal, Section 2

For furnishing and driving a quantity of steel sheet piling, extending the concrete apron and performing all incidental work connected therewith at movable Dam Five at Rotterdam, N. Y.

Sheet piling 1,000 ft.

2.
CONTRACT No. 120
Erie Canal, Sections 2 and 3

For the construction of the superstructure of the following locks and barge locks over the Mohawk River:

- Lock No. 1 at Rotterdam, Station 1682 + 45, Erie canal.
- Lock No. 2 at Amsterdam, Station 1987 + 79, Erie canal.
- Lock No. 3 at Amsterdam, Station 2201 + 46, Erie canal.
- Lock No. 4 at Totten Hill, Station 2443 + 17, Erie canal.
- Lock No. 5 at Amsterdam, Station 2554 + 64, Erie canal.
- Lock No. 6 at Amsterdam, Station 3370 + 50, Erie canal.
- Lock No. 7 at Fort Plain, Station 3553 + 85, Erie canal.

Sheet piling 1,000 ft.

Plans may be seen and detailed specifications, engineer's estimate and proposal blanks, form of contract and bonds required and other information for proposers may be had at the office of the Superintendent of Public Works at Albany, N. Y., at the office of the Assistant Superintendent of Public Works for the Middle Division at Syracuse, N. Y., at the office of the Assistant Superintendent of Public Works for the Western Division at Rochester, N. Y., and at the canal office at Spaulding, N. Y., and at Buffalo, N. Y.

Drawings, specifications and drawings may be obtained from the State Engineer at Albany, N. Y., upon payment to him of the cost of producing them.

Monthly retainers will be paid of ninety per centum (90 per cent) of the work done at the contract price. Every proposal for the work hereof must be accompanied by a money deposit in the form of a draft or certified check upon some good banking institution in the State of Albany or New York, issued by a bank or savings bank in good credit within the state and cashed by the Superintendent of Public Works for the amount of the deposit of the amount of the proposal.

The money deposit must be accepted and be accepted by the Superintendent of Public Works within ten days after the opening of the bids. If the money deposit is not accepted by the Superintendent of Public Works within ten days after the opening of the bids, the money deposit will be returned to the proposer unless the Superintendent of Public Works shall have received the money deposit prior to the opening of the bids. The money deposit will be returned to the proposer if the Superintendent of Public Works shall have received the money deposit prior to the opening of the bids.

The Superintendent of Public Works shall have the right to reject any or all bids and to award the contract to whom he may deem proper.

The Superintendent of Public Works shall have the right to reject any or all bids and to award the contract to whom he may deem proper. The Superintendent of Public Works shall have the right to reject any or all bids and to award the contract to whom he may deem proper.

The Superintendent of Public Works shall have the right to reject any or all bids and to award the contract to whom he may deem proper. The Superintendent of Public Works shall have the right to reject any or all bids and to award the contract to whom he may deem proper.

Each proposal must be addressed to the Superintendent of Public Works, Albany, N. Y., and must be endorsed on the envelope with the name of the construction for which the proposal is made.

Award, if made, will be made to the person or persons whose proposal shall be lowest in cost to the State for doing the work, and which shall comply with all provisions required to render it formal. Before any award shall be made the lowest bidder will be required to satisfy the Superintendent of Public Works of his ability to provide suitable equipment and materials for the proper performance of the work.

The right is reserved to reject all proposals and readvertise and award the contract in the regular manner if, in the judgment of the undersigned, the interests of the State will be enhanced thereby.

MURCAN W. PECK,
Superintendent of Public Works.

Bids received until Aug. 8, 1914.

Power House, etc.

NOTICE TO CONTRACTORS.—Sealed proposals for construction of Power House, including boiler plant piping and conduits, plumbing and electric work, construction, heating, plumbing and electric work for five cottages and dormitory; sewage and sewage disposal plant and water supply works, for the New York State School of Agriculture on Long Island near Farmingdale, N. Y., will be received by Dr. Franklin W. Hooper, Secretary of the Board of Trustees, 30 Lafayette Avenue, Brooklyn, N. Y., until 10 o'clock a. m. on Saturday, August 8, 1914, when they will be opened and read publicly. Bids will be received for each division of the work separately and no combination of bids will be considered. Proposals shall be submitted on the blank form and in sealed envelope addressed to the Secretary, furnished by the State Architect. This envelope shall also contain certified check in the sum of 5% of the amount of bid. Each contractor to whom an award is made will be required to furnish surety company bond in the sum of 5% of the amount of contract within thirty (30) days after official notice of award of contract and in accordance with the terms of specifications Nos. 1930, 1931, 1932, 1933, 2010, 2012, 2014, 2015, 2016, 1901 and 1902. The right is reserved to reject any or all bids. Drawings and specifications may be consulted and blank forms of proposal obtained at the office of Mr. A. A. Johnson, Director, Farmingdale, N. Y., and at the office of the State Architect. In applying for plans and specifications, each bidder must state which part of the work, such as construction, heating, plumbing and electric work, he intends to bid. On and after July 14, 1914, drawings and specifications and blank forms of proposal may be obtained at the office of the State Architect upon deposit of a certified check or cash in the sum of ten dollars (\$10.00) made payable to the State of New York, for each part of the work, which check or cash will be returned if plans and specifications are sent back in good order to the State Architect.

LEWIS F. PILCHER, State Architect.

Construction News

★Denotes work advertised in ENGINEERING NEWS.

†Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

PRICES OF ENGINEERING MATERIALS POSTPONED

The compilation of quotations on engineering materials, usually appearing in "Engineering News" in the first issue of the month, has been postponed. The rapid-changing trade and the unusual fluctuations in raw material make many quotations of small benefit. While it has not affected the iron and steel market as yet, it may possibly do so. The price of pig tin has doubled in the week, and it is almost impossible to secure supplies at any price. It is difficult to get trustworthy quotations on leather, because a great deal of the sole leather made in this country is from hides shipped from South America to Europe and then to the United States. The rubber market is likewise disorganized. It is expected that in another week some better index of mercantile conditions may be gathered and quotations published.

Construction work which has been started will be pushed to completion unless the return of low-grade labor to Europe temporarily postpones it. The subway work in New York, it is expected, will not be halted.

The combined forces of government officials and bankers have worked together to prevent any further exportation of gold and provide funds for carrying on work in this country. Fortunately, the commercial establishments of this country have been so thoroughly liquidated in the last year that there is no danger of disaster from causes within.

RAILWAYS

†**Pennsylvania**—Pennsylvania R.R.—This company has awarded the contract to the LATT & TERRY CONSTRUCTION CO., Philadelphia, Penn., for constructing an extension of the Sugar Camp Branch of its Tyrone Division in Pennsylvania. It will be 6½ miles long.

Pennsylvania—Delaware, Lackawanna & Western R.R.—This company, it is reported, plans to construct a cut-off between Pocono Summit, Penn., and Henryville, 10 miles. G. J. Ray, Hoboken, N. J., is Ch. Engr.

West Virginia—Baltimore & Ohio R.R.—This company plans to start work soon on eliminating curves and cutting down grades on its Ohio River Division. Work will be started near the city of Sistersville, W. Va. F. L. Stuart, Baltimore, Md., is Ch. Engr.

Georgia—Calhoun, Pelham & Moultrie R.R.—This company has been incorporated for the purpose of constructing a railroad connecting Pelham, Calhoun and Moultrie, Ga., 50 miles. D. B. Turner, Pelham, Ga., is interested.

Mississippi—New Orleans, Mobile & Chicago R.R.—This company will probably start work soon on its proposed line from Beaumont, Miss., to Vavaland, La. A. F. Church, Laurel, Miss., is Supt.

Louisiana—New Orleans, Mobile & Chicago R.R.—See item under Mississippi.

Illinois—Chicago & Northwestern Ry.—This company plans to issue \$6,000,000 in bonds for construction work on its lines. W. H. Finley, Chicago, Ill., is Ch. Engr.

Chicago & Alton R.R.—This company plans to spend \$150,000 to enlarge its freight yard at Venice, Ill. H. T. Douglass, Jr., Chicago, Ill., is Ch. Engr.

†**Wisconsin**—Chicago & Northwestern Ry.—This company has awarded the contract to PEPHARD & BERRILL, Minneapolis, Minn., for grading work on about seven miles of logging railroad in Wisconsin.

Minnesota—Minneapolis, Mille Laes & Northern Ry.—It is reported that, due to insufficient financial support, this company has abandoned the project of constructing the proposed railroad from Anoka, Minn., north to Aitken, Minn. Marshall Roy, 3300 Washington Ave. North, Minneapolis, Minn., is Engr. Noted Feb. 19, Mar. 5 and June 11.

†**Nebraska**—Chicago, Burlington & Quincy R.R.—The Edward Peterson Co., general contractor for this company's Chalco-Yutan cut-off, has awarded subcontracts to the following: ROBERTS, BROS., 17 North La Salle St., Chicago, Ill.; G. W. CONDEN, Omaha, Neb.; PETERSON-BREMAN Co., Omaha; JOHN MORSEY, Omaha, and CRAIG & HESS, Omaha. Noted July 16.

South Dakota—South Dakota Central Ry.—This company plans to start work soon on its proposed 25-mile extension north from Watertown, S. D., to J. L. Wagner, Sioux Falls, S. D., is Ch. Engr. Noted June 18.

Arkansas—Missouri, Arkansas & Northwestern Ry.—The Arkansas State Board of Railway Incorporation, July 25, granted a charter to this company to construct a 65-mile railway from Mena, Ark., to Hot Springs, Ark. The proposed line will cross Polk, Montgomery and Garland Counties. Capital, \$2,500,000. J. L. Williams, Hot Springs, is interested. Noted July 2 and July 9.

Idaho—Idaho Lumber Co.—This company, located at St. Maries, Idaho, will construct a railroad into the Marble Creek lumber district of Idaho.

Washington—Chiclero, Milwaukee & St. Paul Ry.—The City Council of Bellingham, Wash., has granted a franchise to this company to construct a line from its terminals in the

city to a point on Lake Whatcom about 10 miles. C. F. Loweth, Chicago, Ill., is Ch. Engr.

Oregon—The citizens of Roseburg, Ore., will vote, Oct. 5, on the proposition to issue \$300,000 in bonds for constructing a railroad from Roseburg to tide-water.

†**California**—The ALTA CONSTRUCTION CO., Los Angeles, Calif., has been awarded the contract for constructing the proposed narrow-gauge railroad from the Dairy Farm Mine to Sheridan, Calif.

Los Angeles & San Diego Beach Ry.—This company, operating a line between San Diego and La Jolla, Calif., has applied to the State Railroad Commission for permission to issue \$750,000 in bonds for the electrification of its system. E. S. Balock, San Diego, is Pres.

Ontario—Ontario, West Shore Ry.—Bids will be received until Aug. 13 for the purchase of this company's line. Charles Garrow, Barrister, Goderich, Ont., may be addressed for further information.

†**Saskatchewan**—Canadian Northern Ry.—This company has awarded the contract to A. L. McKAY, Estevan, Sask., for grading the proposed branch from Benfield, Sask., to Estevan.

Saskatchewan—Canadian Northern Ry.—This company plans to award grading contracts in the fall on the proposed extension of its Radville Branch toward Weyburn, Sask. M. H. MacLeod, Winnipeg, Man., is Gen. Mgr. and Ch. Engr.

ELECTRIC RAILWAYS

Augusta, Maine—The Lewiston, Augusta & Waterville Street Ry. Co. has been granted a franchise to extend some of its lines in Augusta. Harry B. Ivers, Portland, is Gen. Mgr. and Pur. Agt. Noted July 23.

Dover, N. H.—The Dover, Somersworth & Rochester Street Ry. Co. is considering plans for the extension of its line from Dover to Portsmouth, on the New Hampshire side of the river. Franklin Woodman, Haverhill, Mass., is Vice-Pres. and Gen. Mgr.

Buffalo, N. Y.—The City Council has granted a franchise to the Buffalo & Lake Erie Traction Co. to construct an electric railway on State St. from 12th St. to Turnpike, in Buffalo. A. R. Myers, Erie, Penn., is Gen. Mgr.

New York, N. Y.—(Borough of Queens)—The New York & Long Island Traction Co. has applied to the Board of Estimate for a franchise to construct and operate an electric railway on Lawn Ave. from Liberty Ave. to Rockaway Road, in the Fourth Ward, Borough of Queens. This line will connect with the Brooklyn Rapid Transit elevated extensions of the Fulton St. line to Jamaica. W. O. Wood, Long Island City, is Vice-Pres., Gen. Mgr. and Pur. Agt.

Yardville, N. J.—The Trenton & Mercer County Traction Co. will extend its system from Yardville to Crosswicks, about 2½ miles. W. H. Hitchcock, Trenton, is Gen. Mgr.

†**Hershey, Penn.**—The Hershey Transit Co. has awarded the contract for the construction of an electric railway from Hershey to Elizabethtown, about 9 miles, to the KING, EVANS, RILEY Co., Pottsville, Penn. Noted June 11.

†**Meadville, Penn.**—The Northwestern Pennsylvania Ry. Co. has awarded a contract to the ERIE STEEL & CONSTRUCTION CO. for re-laying its tracks from Cambridge Springs to Meadville.

Morrisville, Penn.—The Interurban Traction Co. has been granted permission to build an additional track on Trenton Ave.

Reading, Penn.—The Reading, Birdstown & Pottsville Trolley Co. is preparing plans for the construction of an electric railway from Reading to Pottsville, about 18 miles. William Abbott Whitman, Reading, is Gen. Mgr.

Frederick, Md.—The Hagerstown & Frederick Electric Ry. Co. has purchased the Frostburg Illuminating & Mfg. Co. This is the first step toward the proposed construction of an Interurban electric railway to connect Johnstown, Frostburg, Cumberland and Hagerstown.

Andrews, N. C.—The Hiwassee Valley Ry. Co. is making preliminary arrangements for the construction of an electric railway to connect Andrews, N. C., and Hiwassee, Ga., about 35 miles. J. Q. Barker, Andrews, is interested. Noted Mar. 5.

Jesup, Ga.—M. Arlino, Jesup, is interested in the organization of a company for the purpose of constructing an electric railway from Jesup to Doctortown.

Miami, Fla.—The City Council has granted a franchise to the Miami Traction Co. to construct a 2½-mile electric railway in Miami.

Alexandria, La.—The Southern Traction & Power Co. has applied to the Council for a franchise to extend its lines on 13th and 16th Sts. to the city limits. Ernest Roehne, Alexandria, is Vice-Pres. and Gen. Mgr. Noted July 9.

Shreveport, La.—The Shreveport Traction Co. has been granted franchises to construct and operate an electric railway in Caddo Parish. W. A. Sullivan, Shreveport, is Gen. Mgr. and Pur. Agt.

✚Sault Ste. Marie, Mich.—The Edison Sault Electric Co. has awarded the contract for improvements to its power plant to MARSHALL N. HUNT at about \$17,000. The work includes an addition to the power house and the installation of three new turbines, increasing the output by 1000-hp. Noted Apr. 2.

Sullivan, Ill.—The city has voted \$35,000 in bonds for the improvement of the municipal electric-light plant and water works. Hugh Hoke is Supt.

El Dorado, Wis.—Plans are being prepared for the establishment of a hydro-electric plant for the Wisconsin Power, Light & Milling Co. at El Dorado. An auxiliary steam plant will be equipped. Oscar A. Huelsman, Fond du Lac, is Pres. of the company.

✚Wauwatosa, Wis.—The contract for the construction of a new power plant for the Milwaukee County Tuberculosis Sanatorium at Wauwatosa has been awarded to the AMERICAN CONSTRUCTION CO. Noted June 18 and July 16.

Atvord, Iowa—The city has voted in favor of a bond issue for the construction of a municipal electric-light plant.

Anceina, Iowa—An election will be held Aug. 17 for the purpose of voting for a bond issue of \$7000 to be used for the construction of a municipal electric-light plant. J. C. Nelson is City Clk. Noted July 23.

Etherville, Iowa—Bids will be received until 9 a.m., Aug. 11, by N. E. Egbert, City Clk., for improvements to the municipal electric-light plant. It includes: A radial brick or reinforced concrete stack, 150 ft. high, 5 ft. in diameter; an industrial trolley car; 300-hp. boiler installation; mechanical stokers, 400-hp. engine, generator, switchboard, re-molding pole line, and wiring system. J. F. Druar, Commercial Bldg., St. Paul, Minn., is Consult. Engr.

Barnesville, Minn.—Bids will be received until Aug. 15, by the Board of Education for all heating, plumbing, ventilation and electrical work in a new public school building at Barnesville. E. P. Broomhall, 710 Alworth Bldg., Duluth, Minn., is Archt.

Elk River, Minn.—It is reported that F. D. Waterman is considering plans for installing an electric lighting and power plant in Elk River.

Adams, Neb.—The citizens have voted to issue bonds for \$13,000 for the installation of a municipal electric-lighting system. Johnson & Johnson, Falls City, Neb., are Engrs.-in-Charge. Noted July 16.

Sidney, Neb.—It is reported that bids are being received for the installation of a municipal electric-lighting system and district steam-heating plant.

Green River, Wyo.—An election will soon be held for the purpose of voting on the question of issuing \$20,000 in bonds, the proceeds of which will be used for the construction of a municipal electric-light plant.

Fort Benton, Mont.—Bids will be received until Aug. 17, by F. Murphy, City Clk., for the purchase of \$17,000 of bonds, the proceeds to be used for the construction of an electric-light plant. Noted July 9.

Excelsior Springs, Mo.—The Excelsior Springs Water, Gas & Electric Co. has applied to the Public Service Commission for permission to issue \$25,000 in bonds for general improvements to its system. S. W. Henderson is Vice-Pres. and Mgr.

Montrose, Mo.—An election was held July 21, at which the question of a bond issue for the purpose of building a municipal electric-light plant was carried.

✚Gonzales, Tex.—(Official)—Bids will be received until noon, Aug. 12, by Frank S. Taylor, Engr.-in-Charge, Austin, Tex., for the construction of a reinforced concrete dam on the Guadalupe River. See advertisement under Contracts T. Be Let.

✚Longview, Tex.—(Official)—A contract has been awarded to the ROACH MANINGAN PAVING CO., Fort Worth, Tex., for the development of hydro-electric power plant on Longview, including the equipment and building the water tower at Longview.

Guthrie, Okla.—A special election will be held Aug. 11, to vote on the question of issuing \$250,000 in bonds for the installation of a municipal electric plant. It. N. Dunham is City Clk.

Fort Collins, Colo.—The Great Western Granite Mfg. Co., Fort Collins, will probably ask bids in the early fall for the construction of a power plant, 32,000 ft. of 26-in. pipe line and a finishing plant.

Tempe, Ariz.—The City Council has engaged L. G. Knipe, Phoenix, Ariz., to prepare plans for the construction of a municipal lighting and power plant. Frank Thomas is City Clk.

Danville, Wash.—The Austin-McCain Co., Spokane, Wash., plans to construct a transmission line from Danville to Republic, Wash., a distance of 30 miles. The estimated cost is \$300,000.

Oroville, Wash.—The Okanogan Valley Electric Co. has recently taken over the holdings of the Similkameen Power Co., including its electric-power site and plant at Similkameen Falls. The new company will make extensive improvements to the plant, including the installation of electrical machinery to develop 2000 hp.

Pe Ell, Wash.—The Central Power Co. plans to build a concrete dam at Pe Ell to cost about \$18,000. L. A. Webb, Aberdeen, Wash., is Pres. and Mgr.

Hillsboro, Ore.—The plant of the Hillsboro Power & Investment Co. was recently destroyed by fire. A new plant, estimated to cost about \$25,000, will be built. O. B. Gates, Hillsboro, is Gen. Mgr.

San Francisco, Calif.—The Pacific Gas & Electric Co. is having plans prepared by Frederick H. Meyer, Archt., 742 Market St., for the construction of a sub-station at 23rd and Georgia Sts. Estimated cost, \$40,000.

Edmonton, Alta.—It is reported that Sanderson & Porter, Engrs., 52 William St., New York, N. Y., are interested in the development of hydro-electric power plant on the Fraser River near Edmonton. About \$3,000,000 will be spent.

BRIDGES

Ashland, N. J.—Bids will be received until 11 a.m., Aug. 10, by the Board of Chosen Freeholders of Camden County, Camden, for rebuilding the Eberts Bridge near Ashland. Fred W. Gercke is Chn. of the Bridge Com.

✚Flemington, N. J.—The Board of Chosen Freeholders of Hunterdon County has awarded the contract for the construction of a bridge over the Rockaway River at Hall's Mills, on the Whitehouse-New Germantown Road to the DOVER BOILER WORKS at \$4800.

Morrisstown, N. J.—Bids will be received until Aug. 10, by the Board of Chosen Freeholders of Morris County for the construction of two reinforced concrete bridges, one over the Rockaway River, and the other over a branch of the same river on the Denville and Pine Brook Road about one-mile west of Pine Brook.

✚New Gretna, N. J.—(Official)—The Board of Chosen Freeholders of Burlington County, Mount Holly, has awarded the contract for the construction of the East River Bridge at New Gretna to the RENNELL CONSTRUCTION CO., 30 Church St., New York, N. Y., at \$16,350. Other bidders were: Kelley-McFeeley Co., Camden, \$19,370; Bridgeton Construction Co., Bridgeton, \$19,000; Penn Bridge Co., Beaver Falls, Penn., \$18,800; Medford Concrete Co., Medford, \$17,200; A. M. & H. Mathis, New Gretna, \$17,400. Noted July 16.

✚Butler, Penn.—(Official)—Bids will be received by H. O. Carson, City Engr., until noon, Aug. 25, for the construction of the Wayne St. Viaduct, across the tracks of the Buffalo & Erie R.R., at Buffalo, Pa. See advertisement for details see advertisement under Contracts to Be Let. Noted July 16.

✚Eunston, Penn.—(Official)—The Commissioners of Northampton County have awarded the contract for the construction of a reinforced concrete bridge over Monocacy Creek, Moore Township, to WILLIAM H. BARRALL, Bath, Penn. Noted July 30.

Greenville, Penn.—(Official)—Bids will be received until noon, Aug. 17, by the Commissioners of Mercer County, Mercer, for erecting the superstructure of a bridge over the Shenango River on College Ave., Greenville. H. G. Comstock is Clk. of the Comrs.

Mortonville, Penn.—Bids are being received by William Hunter, Ch. Engr., Philadelphia & Reading Ry., Reading Terminal, Philadelphia, for the construction of a reinforced-concrete bridge at Mortonville. The estimated cost is \$15,000.

Norristown, Penn.—(Official)—Bids will be received until 11 a.m., Aug. 25, by the Commissioners of Montgomery County for the following: Construction of a reinforced-concrete bridge over Tacony Creek, Glenside; a three-arch stone bridge over Mingo Creek, Upper Providence Township; replacing the East St. Bridge, Norristown; and repairing a bridge east of Gwynedd Valley Station, Lower Gwynedd Township. John N. Jacobs is County Controller.

Simpson, Penn.—The Commissioners of Lackawanna County, Scranton, the Scranton Ry. Co., the Delaware & Hudson Co., the Erie R.R. and the New York, Ontario & Western Ry. plan to construct a viaduct in Simpson at the foot of what is known as "Turkey Hill." The viaduct is estimated to cost about \$68,000, and the expense will be divided proportionately among the beneficiaries.

✚Somerset, Penn.—(Official)—The Commissioners of Somerset County have awarded the contract for the construction of three small bridges to W. G. FERNER, Somerset, at a total of \$4922, and \$9 per cu.yd. for extra concrete; the contract for two bridges was awarded to WILLIAM ESCHERICK, Kimmelton, Penn., at \$2830. The award of the Ploegherly Run Bridge was held over until Aug. 3. Noted July 23.

Norfolk, Va.—(Official)—A franchise has been granted to the Norfolk-Berkley Bridge Corporation for the construction of a bridge over the Eastern Branch of the Elizabeth River, between Berkley and Norfolk. The estimated cost is \$350,000. George Dodge, 321 Bank of Commerce Bldg., Norfolk, is Designing Engr. J. O. Wiggs is Chn. of Bridge Com.

Winston-Salem, N. C.—(Official)—Bids will be asked, as soon as plans are completed, for the construction of a bridge, 500 ft. long, north of Conrads Ferry. The cost is estimated at \$25,000 and will be divided between Forsyth and Yadin Counties. J. N. Ambler is Engr.-in-Charge. E. T. Mickey, Winston-Salem, is Chn. of Bridge Com. Noted July 23.

Augusta, Ga.—Plans are being prepared for the construction of a concrete bridge across Butler's Creek on the Louisville Road, replacing the present wooden one, which is 300 ft. long.

Jacksonville, Fla.—Bids will be received until Aug. 10 by the Committee on Public Works of the Board of Bond Trustees for the construction of a reinforced concrete bridge over Hogan Creek at Main St. George M. Powell is Chn. of the Bd.

Jacksonville, Fla.—The Board of Commissioners of Duval County has adopted a resolution providing for the engaging of engineers to prepare plans for the construction of a bridge over the St. Johns River starting from the Broad St. Viaduct and running parallel to the bridge of the Florida East Coast Ry. The bridge will be about 60 ft. wide, and will have a draw span of at least 320 ft. Noted July 9.

✚Selmer, Tenn.—The County Court of McNairy County has awarded the contract for the construction of 12 bridges to the LAMBERT CO., Memphis, and for 12 bridges to the MEMPHIS BRIDGE CO.

✚Louisville, Ky.—The Fiscal Court of Jefferson County has awarded the contract for the construction of a reinforced-concrete bridge over Floyd's Fork to PIERCE BUTLER, at \$12,972.

✚Akron, Ohio—The City Council has awarded the contract for reinforcing the Mill St. Viaduct to S. W. PARSHALL, at \$300. Noted July 23.

Athens, Ohio—Bids will be received until Aug. 15, by the Board of Commissioners of Athens County, for the construc-

the corporate board of a bridge over Federal Creek.

Harrison, Ohio.—Bids will be received until 10 a. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Caldwell, Ohio.—Bids will be received until Aug. 8, by the Commissioners of Crawford County for the construction of a bridge over the west fork of the river over the Township of H. A. Beckhauer is Engineer.

Cleveland, Ohio.—Bids reports state that T. P. McCourt, Assistant Engineer, has withdrawn his bid for the construction of a bridge over the west fork of the river over the Township of H. A. Beckhauer is Engineer.

London, Ohio.—Bids will be received until noon, Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Indianapolis, Ind.—Bids have been completed. Bids were received for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Lansing, Mich.—Bids will be received until noon, Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Chicago, Ill.—Bids will be received until 11 a. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

St. Louis, Mo.—Bids will be received until 11 a. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

New London, Wis.—Bids will be received until Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

John City, Iowa.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Keokuk, Iowa.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Marshalltown, Iowa.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Mason City, Iowa.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Atchison, Kan.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Cottonwood Falls, Kan.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Independence, Kan.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Lawrence, Kan.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Nederland, Kan.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Bozeman, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Great Falls, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Helena, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Butte, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Missoula, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Bozeman, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Great Falls, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Helena, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Butte, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

Missoula, Mont.—Bids will be received until 2 p. m., Aug. 10, by the Commissioners of Crawford County for the construction of a bridge over the mouth of the South Fork of the river over the Township of H. A. Beckhauer is Engineer.

the Brown Springs Road, and for several smaller bridges across Berwick Creek, Tracer Creek and Prairie Rayou. The estimated total cost is \$200,000. R. C. Fitzhugh is County Engineer.

Searcy, Ark.—Bids will be received until Aug. 10 by the County Court of White County, Searcy, for the construction of four bridges. J. B. Mitchell is County Engineer.

Houston, Tex.—Official—Bids will be received until 10 a. m., Aug. 10, by H. L. Washburn, Auditor of Harris County, for the construction of two concrete bridges on the Westheimer-Alley Road, and for the construction of two concrete culverts on the Washington County Road.

Lampasas, Tex.—At an election held July 18, the citizens of Lampasas County voted in favor of a bond issue of \$14,000 for building four bridges in the county.

Santa Fe, N. M.—Bids will be received until Aug. 25, by the State Engineer for the construction of a bridge over the Rio Grande River at Arroyo. It will be 465 ft. long, pony truss, pile foundation.

Phoenix, Ariz.—Bids will be asked at once by Lamar Cobb, State Engineer, for the construction of a concrete bridge, about 135 ft. long, over Canyon Diablo, Coconino County. Noted May 28.

Plans have also been prepared for concrete bridges over the Milky and Beaver dam washes in Apache County.

Buckley, Wash.—Official—Bids will be received until 2 p. m., Aug. 10, by the Board of Commissioners of King County, Seattle, for the construction of concrete piers for the Buckley Bridge. Byron Phelps is Clerk of the Bd. Noted July 30.

Okanogan, Wash.—The Commissioners of Okanogan County have awarded the contract for the construction of a draw bridge across the Okanogan River at Malott to D. S. GAMBLE, Brewster, Wash., at about \$10,000. Noted Feb. 26, Apr. 2 and Apr. 16.

Itasca, Wash.—Official—Bids will be received until Aug. 10, by the Commissioners of Adams County, for the construction of three reinforced concrete bridges, 100-, 70- and 30-ft. spans respectively. F. R. Hewitt is County Const. Engr.

Snoqualmie, Wash.—Bids will be received until Aug. 17, by the Commissioners of King County, Seattle, for the construction of a bridge over Tokul Creek, near Snoqualmie. Byron Phelps is Clerk of Comrs.

Construction News

*Denotes work advertised in ENGINEERING NEWS.

†Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

CHAOTIC TRADE CONDITIONS

The machinery built up through more than a hundred years practice to conduct the foreign trade of the United States has broken down, and conditions are now so unusual that trade abroad is practically impossible, at this writing, even if there were vessels to convey the merchandise. All this occurs through the breaking down of foreign exchange, and for the time being, any trading which is carried on will have to be done more or less by barter.

Such a catastrophe as a general foreign war, involving all of Europe, was scarcely dreamed of. To be plunged into it in less than a week and then have European investors unload securities acquired here for a couple of generations, would have caused immeasurable suffering in this country and the wiping out of competence and fortunes. For this reason, the closing of the principal exchanges in the United States, the resort to clearing house certificates and emergency currency was the measure of protection, not because of alarming conditions in the United States, but to prevent the general European panic from spreading here. Business activity in the United States will resume its normal status, after the lapse of a few months, but in a more restricted way, particularly if the European nations continue their conflict for any great length of time thus requiring the issue of an enormous bulk of new securities. This will raise the interest rate of the world and will make it difficult for municipalities and geographical divisions to secure money at the old rate of interest.

The Controller of the City of New York has announced that subway work now under construction would go forward and that the remaining contracts would be let, permitting the rounding out of the system. This is as it should be. Some other work will be postponed, such as the \$12,000,000 circular court house which will be a structure of beauty. It is likely that the lavish expenditures by American railways for elaborate passenger terminals will be checked for many years, but ordinary construction will go on with very little hindrance.

The fact that the American farmers are harvesting a great crop, which they will eventually sell to the people of Europe at a higher price than in time of peace, will mean much for the agricultural and financial prosperity of the country. The crop report of Aug. 1, however, was much less satisfactory than was expected.

Prices of materials are difficult to quote. There is always hard-to-measure by some consumers who must have supplies. The U. S. Steel Corporation announced in Aug. 5 that all quotations had been withdrawn on Aug. 4. This means that there is no standard price for steel products.

One reason why the steel trade is unable to take contracts for forward delivery is the shortage of ferro-manganese. This material, which comes from Russian ore, for the most part, is practically indispensable in the present process of manufacturing steel. Some manganese ore comes from the Americas, but for the present there is no way of knowing when it will be possible to secure supplies.

A spectacular advance in pig tin doubled the price in less than a week, leather is scarcely quoted, while the rubber market is demoralized. Within a month trade conditions as far as the U. S. is concerned, should settle down and become more or less normal.

Comparative Prices—The wild movement in the price of commodities is given in the accompanying table. Some of the quotations given are of course only of academic interest to readers of the paper but they serve to show the startling changes in a few weeks.

Wholesale Prices	July 1	Aug. 10
Pig Tin per lb.	\$0.21	\$0.44
Solder per lb.	0.20	0.58
Antimony per lb.	0.07 1/2	0.16
Rubber (up river) Para fine per lb.	0.60	1.20
Quicksilver per flask.	35.00	\$5.00
Sugar 100 lb.	4.40	8.00
Flour per bbl.	4.50	5.85
Corn bu. (Chicago)	0.55	0.72
Wheat bu. (Chicago)	0.77	0.98

LABOR

Most of the Labor Bureaus in New York are of the opinion that there will be no shortage of contract laborers. The general opinion is that there will be a surplus of laborers, particularly of this class, in the very near future. The mobilization of Austrians, Germans, and men of the Balkan provinces in this country, has practically ceased, owing to the inability to secure transportation; and most of these will be looking for work. There has also been a great rush of foreigners to get naturalization papers. Most of the construction work has been carried on by immigrants from the south of Italy, and the Italian immigration has made up nearly 25 per cent. of the total immigration coming into this country. In the accompanying table, taken from the immigration report for May, 1913, the United States Department of Labor, is shown the total permanent immigration. The temporary, or non-immigrant arrivals being given in a different part of the report and not published. Unofficial figures for May and June are also available, the total immigration for May numbering 107,796, while for June the number was 71,728, Italian immigration, alone, falling off about 14,000.

AN ENLARGED METAL MARKET

Nerves have the New York metal market seen such violent changes in the price of metals as have occurred in the last two weeks. Speculations for tin and antimony have doubled, copper has practically quadrupled in Europe and in the United States, and a level made below 12 cents. Lead and spelter show no change, but the markets are nervous.

Tin. The market for the tin market was excited but no sales for a month were made above 21c. On the following day with the opening of the London metal exchange, the New York Stock Exchange and the New York Metal Exchange, the heavy flow of international credit, the inability to draw bills of exchange, prices were more or less chaotic, but sales were made at 21c. Since that time markets for all metals of New York have been represented by the following quotations: Aug. 1, 25c; Aug. 2, 25c; Aug. 3, 25c; Aug. 4, 25c; Aug. 5, 25c; Aug. 6, 25c; Aug. 7, 25c; Aug. 8, 25c; Aug. 9, 25c; Aug. 10, 25c; Aug. 11, 25c; Aug. 12, 25c; Aug. 13, 25c; Aug. 14, 25c; Aug. 15, 25c; Aug. 16, 25c; Aug. 17, 25c; Aug. 18, 25c; Aug. 19, 25c; Aug. 20, 25c; Aug. 21, 25c; Aug. 22, 25c; Aug. 23, 25c; Aug. 24, 25c; Aug. 25, 25c; Aug. 26, 25c; Aug. 27, 25c; Aug. 28, 25c; Aug. 29, 25c; Aug. 30, 25c; Aug. 31, 25c.

Most of the tin used in the United States comes from Great Britain and is shipped direct to London. From there it is shipped to the Atlantic Transport Line, the only line of direct steamers from London to the United States. The usual importation in this country is 1000 tons a week. When the tin falls there more in the United States 1200 tons of tin in one shipment. Of course, the tinplate companies had a surplus of tin. With the embargo on shipping and the refusal of the British government to permit the exportation of tin, the price jumped rapidly, and the only tin which has arrived since that time in consequence came in on the Munich ball on Monday aggregating 365 tons. There is a glut on both seas for American ports about 1200 tons. When the tin market fell to a certain extent, the quotations have been made that the U. S. Steel Corporation will send a cargo of tin to Singapore to secure tin. This is a possibility. Then too, there is a possibility that the tin can be imported and shipped in England, and neutral bottom be resumed on the high seas. This will mean a tremendous crash in the price. As far as the metal itself is concerned, it is mostly the tin plate trade, but it is used generally in other arts, that its value is likely to be felt by many lines not ordinarily known to be allied with it.

Copper. Approximately 50% of the copper produced in this country is consumed in Europe. Manufacturing has practically ceased on the continent and still in England in the past few days, and the price of copper has dropped to under 12c. It is probable that a round lot could be purchased at market concessions from even 12c. At present the market is represented by a quotation of 12.50c, but this is purely nominal. Producers have taken steps to restrict the output and it will undoubtedly soon be adjusted to consumption. In the meantime, the reports of the Copper Producers' Association will not be issued.

Lead. The market is steady and shows no change, being quoted at 14c in New York, and 25c in St. Louis.

Spelter. The war has had no effect on the spelter market as yet, but it undoubtedly will in the near future and cause the metal to advance. Prime Western sells at 49c to 50c in New York, and 48c in East St. Louis.

Antimony. This metal, which is used to a limited amount in the making of artificial metal and in various compositions, has apparently advanced beyond all limits. Special brands which a week ago were sold at 75c, now command 15 to 25c per pound, and ordinary antimony is selling at 11 to 12c. Most of this metal comes from Germany. It is produced just as the manufacture of shrapnel and munition of war.

IRON AND STEEL

That the iron business is in a sound line is conceded on all hands. There is no surplus stock, and the market is settled down to a low point. It is practically impossible to give general quotations on the steel market, for all the three producers are making quotations from 10 to 15c. In a brief recap of several departments of the steel trade which will follow, it will be given the best available quotations. In all the steel business, the average cost of this raw material ranges from 10 to 15c. As a result of the problems concerning the trade in general, the steel and other departments will be adjusted to the market. The steel market is the only one of the U. S. Steel Corporation on Aug. 1, amounted to 1,175,550 tons, a decrease of 1,175,550 tons in the month.

Fig. 1. Iron. The market has been small, but there has been a steady increase in the price of iron. The following quotations are given for the month of August: No. 1, 11.50c; No. 2, 11.00c; No. 3, 10.50c; No. 4, 10.00c; No. 5, 9.50c; No. 6, 9.00c; No. 7, 8.50c; No. 8, 8.00c; No. 9, 7.50c; No. 10, 7.00c; No. 11, 6.50c; No. 12, 6.00c; No. 13, 5.50c; No. 14, 5.00c; No. 15, 4.50c; No. 16, 4.00c; No. 17, 3.50c; No. 18, 3.00c; No. 19, 2.50c; No. 20, 2.00c; No. 21, 1.50c; No. 22, 1.00c; No. 23, .50c; No. 24, .25c; COUNTRYWIDE GAIN IN BUILDING

For the first time in many months, the reports of building inspectors, relative to the contemplated building plans filed, show a gain in all parts of the country. In the East, where the depression has been particularly marked heretofore, there is a gain of 19% in the 21 cities. Expressed in dollars, this amounts to \$4737. For the first seven months of the year there was a trifling loss.

In 21 cities in the Middle West there was a gain of \$1,600,000, or 7.7%, in July. For the first seven months of the year, the gain amounted to \$3,769,000, or 3.87%.

The returns for seven Pacific Coast cities show an increase of \$340,000, or less than 1%. The gain, slight as it is, shows a turning point, for the loss in the first seven months amounted to \$420,000, which is about 7.3%. An excellent gain of over one million dollars in seven Southern cities shows an increase of about 56%, while the figures for the first seven months of the year also show a gain.

RAILWAYS

New York—Carthage & Cop-nahgan R. R.—This company, it is reported, plans to construct an extension from Cop-nahgan, N. Y., to connect with the Lehigh Valley R.R., at Camden, Carthage, N. Y., is Gen. Mgr.

North Carolina—Durham & Southern Ry.—This company plans to construct an extension from Dunn, N. C., to Mount Olive, N. C., 50 miles. J. E. Staggs, Durham, N. C., is Vice-Pres.

Georgia—Chattahoochee Valley Ry.—This company plans to construct an extension out of McCulloch, Ga. J. T. Barker, West Point, Ga., is Gen. Mgr.

Missouri—Southern Ry.—This company has been incorporated for the purpose of constructing a railroad from Moultrie, Ga., to a point near Decatur, Ga., about 25 miles. W. E. Aycock, Moultrie, is interested. Noted July 25.

Florida—St. Andrews Bay Ry. & Terminal Co.—This company has awarded the contract to J. M. Willis, St. Andrews Bay, Fla., for constructing a five-mile extension. E. L. Wood, St. Andrews Bay, is Ch. Engr.

Florida—Atlantic Coast Line R. R.—This company, it is reported, plans to construct an extension from Sebring, Fla., south to Big Cypress Swamp. E. B. Pleasants, Wilmington, N. C., is Ch. Engr.

Seaboard Air Line Ry.—This company plans to construct an extension 20 miles long from Bartow, Fla., in a southeasterly direction. W. D. Faucett, Norfolk, Va., is Ch. Engr.

Alabama—Birmingham & Southeastern Ry.—This company has announced its intention for the construction of its proposed extension from Eclectic, Ala., to Birmingham, Ala. W. M. Blount, Union Springs, Ala., is Pres.

Louisiana—Texas & Pacific Ry.—This company, it is reported, plans to double-track its line from New Orleans, La., to Alexandria, La., 194 miles. C. H. Chamberlin, Dallas, Tex., is Ch. Engr.

Ohio—Chesapeake & Ohio Ry.—This company plans to spend \$100,000 for additional tracks at its yards at Logan, Ohio. F. I. Cabell, Richmond, Va., is Ch. Engr.

Indiana—Pennsylvania Lines West of Pittsburgh—See item under Illinois.

Illinois—Pennsylvania Lines West of Pittsburgh—This company has secured the right of way for a third track between Chicago, Ill., and Logansport, Ind. Thomas Rodd, Pittsburgh, Penn., is Ch. Engr.

Illinois—La Salle Terminal Ry.—Isham Randolph & Co., Chicago, Ill., Consult. Engrs., have completed the final surveys for this company's proposed line from La Salle to Oakley, Ill., and have turned the determination of the project to the promoters of the proposition who are behind the Chicago, St. Louis & Gulf Transportation Co., which has inaugurated a large freight service on the Illinois & Michigan Canal, to Illinois and Mississippi Rivers. The railway project calls for a connecting belt line tapping the large cement plants in the La Salle District and other industries in the vicinity. Measures will be taken soon looking toward the construction of an interurban line connecting La Salle, Peru and Sterling, Ill., tapping a rich section of country unserved by adequate transportation. It is expected that this project will be fostered by the leading industries in the territory. The La Salle Terminal Ry. will require a number of steel structures over intersecting steam lines, including a swing-span over the Illinois River south of La Salle. The line has been located with a view to handling a large share of the traffic originating in the vicinity in addition to transfer business. Noted July 3.

Minnesota—Minneapolis, St. Paul & Sault Ste. Marie Ry.—This company is acquiring right of way for its proposed Thief River and International branch line. C. N. Falls, Minneapolis, Minn., is Ch. Engr.

North Dakota—Northern Pacific Ry.—This company has awarded the contract to COOK CONSTRUCTION CO., Gillilan Block, St. Paul, Minn., for grading for the proposed line south of Beach, N. D. Noted June 25.

Montana—Great Falls Western Ry.—This company has been incorporated in Montana to construct a 115-mile railroad from a point in Cascade County to a point in Powell County. C. L. Whiting, Lewistown, Mont., is interested.

Texas—Gulf, Texas & Western Ry.—The State Railroad Commission and the application of this company to issue \$470,000 in bonds for improvements. B. B. Cain, Dallas, Tex., is Vice-Pres. and Gen. Mgr.

Texas—The State Railroad Commission, July 25, Austin, Tex., approved plans for the proposed interlocking system to be installed in connection with the terminals of the Union Terminal Co., at Dallas, Tex.

Oregon—Roach Timber Co.—This company will award the contract soon for the construction of 14 1/2 miles of railroad east from Sutherlin, Ore. The company's offices are located at Sutherlin.

California—Niland-Blythe R. R. Association—This association has been formed for the purpose of constructing a railroad from a point near Blythe, Calif., to Midland, Calif. A. E. Hull, Van Nuys Bldg., Los Angeles, Calif., is interested.

Ontario—Erie & Ontario R. R.—This company has been incorporated with a capital of \$500,000, to construct a line from Port Maitland on the Toronto Hamilton & Buffalo Ry. and from Port Maitland east to Port Colborne, an additional 20 miles. Surveys are being made. J. N. Beckley, Rochester, N. Y., Pres. of the Toronto Hamilton & Buffalo Ry., is Pres. of the above company.

Finishing the Water Works at Panama—The contract for furnishing the pipe and some of the fittings required for the new water main to be laid from the south end of the Panama R. R. bridge at Gamboa to the aeration basin at the dam above the Miraflores spillway, has been awarded to The United States Cast Iron Pipe & Foundry Co., 71 Broadway, New York, N. Y.

Virginia, Minn.—Bids will be received until 7 p.m., Aug. 17, by the Water & Light Department, for the construction of a high-pressure gas plant. J. W. Murphy is Secy. of the Water and Light Comm.

Evans, S. D.—The city is contemplating the installation of a municipal electric-lighting system.

Parker, S. D.—Bids will be received until Aug. 25, by C. L. Jones, City Auditor, for the construction of a municipal electric-light, heat and power plant. The estimated cost is \$20,000. The Oscar Claussen Engineering Co., Commercial Bldg., St. Paul, Minn., is Engr.-in-Charge. Noted June 11 and July 9.

Auxvasse, Mo.—M. R. Kennedy has made application to the Public Service Commission for permission to construct and operate an electric-light plant in Auxvasse.

Linn Creek, Mo.—Plans are being prepared for the construction of a hydro-electric plant on the Nianqua River, near Linn Creek. It will include five dams of 40 to 50-ft. heads between Linn Creek and Bennett's Mills, and a steel tower transmission system to distribute electricity within a range of 100 miles. L. C. Scott is interested. Noted Jan. 22 and Mar. 5.

Bogata, Tex.—Roy Riggs, Brownwood, Tex., is interested in the organization of a company to establish an electric-light and power plant in Bogata.

Paris, Tex.—The electric power plant which the Texas Power & Light Co. will build at Paris will be equipped with three 500-hp. improved Deisel engines with a full complement of electrical machinery. A transmission line will be built by the company from Paris to Bonham.

Melond, Okla.—(Official)—Bids will be received by the Board of Public Works until Aug. 17, for the construction of transmission lines and a system of street-lighting. The Benham Engineering Co., American National Bank Bldg., Oklahoma City, is Engr. in Charge. Noted June 25.

Mangum, Okla.—At a recent election, the citizens voted in favor of bond issue of \$100,000, to be used for the purchase of the electric-light, water and ice plant.

Culdesac, Idaho.—The City Council has granted a franchise to W. L. Marrs, Cœur d'Alene, to construct and operate an electric-light plant to serve the town and immediate vicinity. Construction work will begin shortly.

Tolcheco, Ariz.—F. G. Baum, San Francisco, Calif., and associates will construct a dam across the Little Colorado River near this point and will erect a hydro-electric plant to provide power for operating mines and other industries. It is proposed to construct transmission lines to Globe, Hayden and Ray, more than 175 miles distant from the proposed main power plant. The dam will impound 447,500 acre ft. of water and will afford a sufficient supply to irrigate a large tract of land. Mr. Baum has filed the plans for the work in the State Land Office at Phoenix.

Tucson, Ariz.—The Federal Light & Power Co. will spend \$170,000 for improvements on the Tucson Rapid Transit Co. and the Tucson Gas, Electric Light & Power Co. About \$100,000 will be expended for new transmission lines, \$40,000 for street-railway improvements, \$10,000 for gas plant and \$20,000 for the extension of transmission lines for irrigation pumping.

Bemet, Calif.—The Board of City Trustees is considering the installation of a municipal power plant to furnish electricity for light and power.

Bolton, Ont.—The ratepayers have voted to take over the plant of the Light, Heat & Power Co., and will spend about \$10,000 for the installation of a new hydro-electric system.

St. Catharines, Ont.—(Official)—A new hydro-electric system for the construction of the city, to cost, when fully completed, about \$116,000. All contracts for the work have been awarded. J. S. Campbell is Chn. of the Hydro-Electric Comm. Noted July 9.

St. Thomas, Ont.—The City Council has appropriated \$20,000 for extensions and improvements to the municipal gas plant.

Shoal Lake, Man.—The City Council has awarded contracts for the construction of a municipal power plant to: E. R. SNIDER, Shoal Lake, for building; CANADIAN GENERAL ELECTRIC CO., Winnipeg, Man., to furnish generator, switchboard and pole line materials and construction; the REFRIGERATION & ENGINEERING CO., Winnipeg, for a Campbell oil engine. Total cost, \$21,200. Noted May 14.

Moose Jaw, Sask.—Bids will be received until noon, Aug. 26, by the City Commissioners for furnishing big pressure steam pipes and appliances for a 3500-hp. plant. James Pascoe and W. F. Heal are Comrs.

Calgary, Alta.—The Western Canada Flour Mills, Ltd., has had plans prepared by Theodore Klipp, Union Trust Bldg., Winnipeg, Man., for the construction of a power house at its plant.

BRIDGES

Ashland, Mass.—Bids will be received until Aug. 15 by Charles T. Dearborn, Chn. of the Bridge Com., for the construction of a reinforced concrete bridge on Concord St.

Cambridge, Mass.—(Official)—The Commissioners of Middlesex County have awarded the contract for the construction of a reinforced concrete bridge to the towns of Medfield and Sherborn to the CHARLES J. JACOBS CO., 107 Terrace St., Roxbury, Mass., at \$10,238. Other bidders were: Hyde Park Construction Co., Boston, \$10,560; H. D'Alpolite & Co., Wrentham, \$11,900; Hapgood Bros., \$12,000; \$12,693; Hancock Engineering Co., \$12,720; B. Perini & Co., Ashland, \$12,703. Noted July 30.

Charlotte, N. Y.—(Official)—The following bids were received Aug. 6, by the Monroe County Building Commission, Rochester, for the construction of a bridge across the Genesee River at a reinforced concrete bridge to the towns of Straus double leaf bascule, (b) Scherzer double leaf bascule, (c) Ball double leaf bascule; Penn Bridge Co. (a) \$231,910; Lupfer & Remick, (a) \$255,062, (b) \$240,008, or \$233,708 with cylinders on west end; Strobel Steel Construction

Co., (c) \$244,962; McHarg-Barton Co., (a) \$218,343 with concrete fixed superstructure, or \$262,975 for official plans, (c) \$245,496 with concrete fixed spans, or \$260,075 with steel fixed superstructure; Seneca Engineering Co., (a) \$262,466; R. H. Ford Co., (a) \$275,684; P. J. Carlin Construction Co., (a) \$276,749. For a single leaf bascule and swing bridge, the bidders were: (a) Ebbitt swing bridge, (b) Strauss single-leaf bascule, (c) Ball single-leaf bascule; Penn Bridge Co., (a) \$207,023 with plank floor, or \$225,023 with pavement, (b) \$226,457; Strobel Steel Construction Co., (a) \$235,000; Ford Co., (a) \$237,335 with plank floor, or \$243,705 with pavement; Lupfer & Remick, \$239,008 for Scherzer single-leaf with cylinders; R. H. Ford Co. for Brown single-leaf with cylinders, or \$266,308 for Brown single-leaf, official plan, otherwise; McHarg-Barton Co., (c) \$242,996 with concrete fixed superstructure, or \$257,628 with steel fixed superstructure; Seneca Engineering Co., (b) \$244,950, or \$269,192 for straight swing bridge. The contract will probably be awarded on Sept. 2. Noted Dec. 11 and Dec. 25, 1913, Apr. 23 and June 11, 1914.

Norwich, N. Y.—(Official)—The Town Board has rejected all bids received Aug. 5 for the construction of a reinforced concrete bridge over Chasawacta Creek, as exceeding the appropriation. New bids will be received until 1:30 p.m. Aug. 19. C. E. Harris, Sturdevant Bldg., Norwich, is Engr. Irving D. Tillman is Town Clk. Noted July 30.

Syracuse, N. Y.—Plans are being prepared for the construction of a new bridge at Oxford St., for which there is an appropriation of \$11,000, and a reinforced concrete West Newton St. Bridge for which \$10,000 is available. Both bridges will span Onondaga Creek, and will be of the box-girder type, with one roadway and two sidewalks. W. T. Wooley is City Engr.

INDUSTRIAL NOTES

The MacArthur Concrete Pile & Foundation Co., 11 Pine St., New York, N. Y., has been awarded a contract for the construction of the foundation of a gas holder for the Portland Gas Light Co., Portland, Maine. It will consist of 576 pedestal concrete piles and a 12-in. concrete mat. The Hartlett Hayward Co., Baltimore, Md., is the general contractor for the work.

Engineering Work at Duluth, Minn.—There is considerable engineering work in progress at Duluth, Minn., this season. The city is doing a large amount of paving, and will construct two miles of concrete road to the new model town at Morgan Park, noted below.

A portland-cement plant is being built by the Universal Portland Cement Co., and adjacent to this the Minnesota Steel Co. is erecting a large steel plant, which probably will be completed next season. This latter company is also constructing a "model town" known as Morgan Park. This work includes building about 140 residences, a hospital, store building, school house, etc.; also complete sewer and water supply systems paving for the principal streets. All of the above work is within the city limits of Duluth.

Not to Build a Non-Union Factory.—J. D. Butts, superintendent of construction, for the Ford Motor Co., at Long Island City, denied there was any truth in the rumor that the Ford Co. had declared a policy against the employment of union labor on its new factory addition at Long Island City.

"The entire responsibility," he said, "lay with the contractor. When a contract is awarded the Ford Company is concerned only about its competition and does not attempt to dictate whether the work shall be done by union or non-union labor. However, in the last six months, all contracts which have been let have contained a clause which requires a contractor to keep his work going by the employment of non-union men if the union labor then employed call a strike."

The Terry Steam Turbine Co., Hartford, Conn., announces that it has appointed Fidanque Bros. & Sons, New York and Panama, with main offices at 15 Whitehall St., New York, its representatives for the Republic of Panama and the Canal Zone. The Cleveland office of the Terry Turbine Co., in charge of L. G. Finlay, has been removed from 710 New England Bldg. to 503 Union Bldg.

At the Shipyards of the Polson Iron Works, Toronto, Ont., the launching took place recently of the third lighter built there for the Department of Railways and Canals of the Canadian Government. It is intended for service in the development of the Hudson Bay terminals. It is 120 ft. long, 21½ ft. beam and 11 ft. draft, and is of the single-screw type. Its power equipment includes a 250-hp. Clyde boiler. The lighter will be steam heated and electrically lighted. The deck equipment includes two 30-ton winches in addition to stem windlasses and capstan. The machinery and engines were placed in the hull previous to launching.

The Union Fiber Co., Winona, Minn., has opened a branch office at 711 Empire Bldg., Atlanta, Ga., in charge of A. J. McArthur, Southern representative. To facilitate deliveries

and to give small buyers the benefit of carload freight rates, the company is keeping on hand in Atlanta a good stock of linoleums, fibrolites, union corkboard, waterproof lith, pipe coverings and other cold-storage insulation products.

The Inde Excavating Co., Iowa Falls, Iowa, has designed an excavating machine of light construction which it states will do the work of the heavier type and eliminate the expense and trouble of transporting, etc. The excavator is

described and illustrated in a catalog recently issued by the company, giving details of construction, operation, power and method of transportation. Views showing the excavator in actual operation are also shown. The Economy excavator is a 12-ton machine, 35 ft. wide and 24 ft. long, all steel, set on four large wheels. The power is furnished by a gasoline engine and is so arranged that the operator can sit in the middle of the machine and operate the shovel from any point.

Contracts to Be Let

Bids received until Aug. 29, 1914.

Construction of an Intake Crib, 36 Inch Cast Iron Intake Main and Concrete Shore Well

Proposals will be received at the office of the Village Clerk of Highland Park, Wayne County, Michigan, until 10 o'clock A. M., Saturday, August 29th, 1914, for

- (A) Furnishing and Placing a Steel Intake Crib.
- (B) Furnishing, Trenching, Laying and Backfilling about 2500 feet of 36 inch cast iron water main, from a Steel Intake Crib located about 2500 feet off shore in 16 feet of water, to a well 300 feet in shore from Lake St. Clair, at the Water Works Pumping Station of the Village of Grosse Pointe Farms.
- (C) Constructing an 18 ft diameter Concrete Well, 39 ft deep.

The right is especially reserved by the Village to reject any or all bids and to accept such proposal as will be to the best advantage of the Village.

Plans and Specifications may be seen after Wednesday, August 12, 1914, at the office of the Clerk of the Village of Highland Park, at the office of Gardner S. Williams, Consulting Engineer, Ann Arbor, Michigan, or will be forwarded upon request to the latter office upon the deposit of a certified check in the amount of \$10.00, which sum will be refunded upon the return of the Plans and Specifications in good condition.

✕

Bids received until Sept. 8, 1914.

Boilers

NOTICE TO CONTRACTORS Sealed proposals for two 125 H.P. boilers at the New York State Soldiers & Sailors Home, Bath, N. Y., will be received by Hon. Joseph A. Goulden, President of the Board of Trustees, New York State Soldiers & Sailors Home, Bath, N. Y., until September 8th, 1914, at 11:00 o'clock A. M., when they will be opened and read publicly. Proposals shall be accompanied by a certified check in the sum of five per cent of the amount of bid, and the contractor to whom the award is made will be required to furnish surety company bond in the sum of fifty per cent of the amount of contract within thirty days after official notice of award of contract and in accordance with the terms of specification No. 173. The right is reserved to reject any or all bids. Drawings and specifications may be consulted and blank forms of proposal obtained at the New York State Soldiers & Sailors Home, Bath, N. Y., at the Department of Architecture, Capitol, Albany, N. Y., and at the New York office of the Department of Architecture, Room No. 1224, Woolworth Building, New York City, upon deposit of a certified check or cash in the sum of \$5.00, made payable to the State of New York, which check will be returned if plans and specifications are sent back in good order to the State Architect Lewis F. Pilcher, Capitol, Albany, N. Y.

WILLIAM H. NICHOLS,
Secretary

Issued Bath, N. Y., August 14, 1914.

✕

Bids will be received until Sept. 10, 1914.

Dredging

ENGINEER OFFICE OF THE PORT COMMISSIONERS OF JACKSONVILLE, FLA.

Room 315 Realty Building, Jacksonville, Florida.

Sealed proposals for dredging in the St. Johns River at Jacksonville for Municipal Dock and Terminal purposes will be received at this office until noon September 10th, 1914, and then publicly opened.

Information in consultation with maps of the locality and a view of place of the project may be had at this office.

F. W. BRUCE, Engineer.

Bids received until Sept. 15, 1914.

Hanover Street Bridge

STATE OF MARYLAND STATE ROADS COMMISSION
NOTICE TO CONTRACTORS

SEALED PROPOSALS for building a bascule span section IV of Hanover Street Bridge as follows: Bascule bridge having a clear span between fenders of not less than 150 feet, a clear roadway of 50 feet, and two sidewalks with a width of 8 feet in clear of railings, will be received by the State Roads Commission, at its offices, 601 Garrett Building, Baltimore, Maryland, until 12 M. on the 15th day of September, 1914, at which time and place they will be publicly opened and read.

Bids must be made upon the blank form contained in the book of specifications. Specifications and plans will be furnished by the Commission upon application and cash payment of \$1.00, as hereafter no charges will be permitted.

No bids will be received unless accompanied by a certified check for the sum of Twenty-five Hundred (\$2500) Dollars, payable to the State Roads Commission.

The successful bidder will be required to give bond, and comply with the Acts of the General Assembly of Maryland, respecting contracts.

The Commission reserves the right to reject any and all bids.

BY ORDER of the State Roads Commission this 6th day of August, 1914.

WM. L. MARCY, Secretary. O. E. WELLER, Chairman.

✕

Bids received until Aug. 22, 1914.

Reservoir Improvements

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received by the Board of Water Commissioners of Waverly, N. Y., until 12 o'clock, noon on the 22nd day of August, 1914, for raising the embankment of their upper reservoir with all its accessories as shown on the plans, or called for in the specifications.

Plans can be seen and specifications obtained at the office of the Board.

The said Board hereby reserves the right to reject any and all bids, or accept any that in their judgment will be for the best interest of the Village.

A bond satisfactory to said Board in amount and sureties will be required of those to whom the contract may be awarded.

Cash or certified check, made payable to the order of the President of said Board to the amount of \$500,000 must be deposited by each bidder and accompany his bid as a guarantee that in case the contract is awarded him, he will, within seven (7) days thereafter, execute said contract.

Bids must be sealed and addressed to said Board of Water Commissioners, Waverly, N. Y., and marked on the outside of the envelope enclosing them, "Proposals for Reservoir Improvements."

ANDREW HILDEBRAND, President.

EDGAR D. SEPPING, Clerk.

✕

Bids will be received until Sept. 10, 1914.

Bulk-Heads

ENGINEER OFFICE OF THE PORT COMMISSIONERS OF JACKSONVILLE, FLA.

Room 315 Realty Building, Jacksonville, Florida.

Sealed proposals for the construction of interlocking steel sheet piling bulk-heads for Municipal Dock and Terminal purposes, will be received at this office until noon, September 10th, 1914, and then publicly opened.

Information may be had and plans of the proposed project may be seen, together with maps of the locality at this office.

F. W. BRUCE, Engineer.

Construction News

✦Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

RAILWAYS

New Jersey—Pennsylvania R.R.—This company has notified the Board of Chosen Freeholders of its intention of elevating its tracks at the City Line and White Horse Pike, subject to proper arrangements with the City Council of Camden, N. J., which is now considering the matter. The improvement is estimated to cost \$100,000.

Pennsylvania—See item under West Virginia.

Virginia—Southern Ry.—This company has awarded the contract for second-track work from Charlottesville, Va., to Arrowhead, Va., to W. W. BOXLEY & CO., Roanoke, Va. The work involves a slight revision of grade.

West Virginia—It is reported that the completion of the railroad from Wheeling, W. Va., via Uniontown, Penn., to Pittsburgh, Penn., is under consideration. Officials of the Baltimore & Ohio R.R. Co., it is stated, are interested.

West Virginia—Hamlin & Guyandotte R.R.—This company has been incorporated in West Virginia with \$50,000 capital to construct a railroad from a point at or near Hamlin, W. Va., to a point on the Guyandotte River, near West Hamlin, in Lincoln County. The incorporators include L. R. Sweetland, J. S. Pridmore, L. M. Thacker and A. F. Morris, Hamlin; J. W. Dingess, of Huntington, and George E. McComas, of Milton.

North Carolina—Southern Ry.—This company plans to award contracts soon for 30 miles of second-track between Pelham and Greensboro, N. C. W. H. Wells, Washington, D. C., is Ch. Engr. Const.

Georgia—Georgia & Florida Ry.—This company plans to construct an extension into Savannah, Ga. D. F. Kirkland, Augusta, Ga., is Gen. Mgr.

Tennessee—Cincinnati, New Orleans & Texas Pacific Ry.—This company has awarded the contract to CUNN & McCARTHY, Chicago, Ill., for second-track work from New River, Tenn., to Sunbright, Tenn., 8.5 miles.

Kentucky—Illinois Central R.R.—This company has awarded the contract for the extension of its freight yards at Fulton, Ky., to H. W. NELSON, Fulton. The improvement consists of the extension of the old tracks a distance sufficient to accommodate 80 additional cars and the building of new tracks. Estimated cost, \$75,000.

Indiana—Chicago & Eastern Illinois R.R.—This company has purchased 70 acres of land at Terre Haute, Ind., as a site for yards, to cost \$150,000. L. C. Hartley, Chicago, Ill., is Ch. Engr.

Illinois—Illinois Central R.R. and Baltimore & Ohio Southwestern Ry.—These companies plan to construct a belt line at Springfield, Ill., to divert freight traffic. A. S. Baldwin, Chicago, Ill., is Ch. Engr.

South Dakota—South Dakota Central Ry.—This company plans to award contracts soon for grading its proposed extension from Waterloo, S. D., in northerly direction. J. C. Wagner, Sioux Falls, S. D., is Ch. Engr. Noted June 18 and Aug. 6.

Arkansas—The construction of a railroad from Hoxie, Ark., to Gulon, Ark., 55 miles, is under consideration.

Ashley, Drew & Northern R.R.—This company plans to construct an extension from Monticello, Ark., to Little Rock, 85 miles. R. O. Roy, Crossett, Ark., is Pres. and Gen. Mgr.

Texas—Missouri, Kansas & Texas R.R.—This company has applied to the City Council of San Antonio, Tex., for a franchise to construct a terminal system of tracks. A. M. Acheson, Dallas, Tex., is Ch. Engr.

Delta Land & Lumber Co.—The construction of a 15-mile railroad from Conroe, Tex., into its timber tract, is contemplated by this company. I. H. Petty, Kansas City, Mo., is interested.

M. J. Hensley and associates are interested in the construction of a railroad from Big Spring, Tex., to Texico, N. M., about 175 miles.

California—Los Angeles & San Diego Beach Ry.—This company has applied to the State Railroad Commission for permission to issue bonds for \$25,000 for the purpose of operating a ferry line. Raymond B. Talbot, San Diego, Calif., is Vice-Pres. and Gen. Mgr.

ELECTRIC RAILWAYS

Franklin, Mass.—The City Council has granted a franchise to the Dedham & Midway Street Ry. Co., to construct and operate an electric railway on Main and Lincoln Sts. Noted July 30.

Springfield, Mass.—The Springfield Street Ry. Co. is considering plans for the extension of its line from Chestnut St. to connect with the electric railway on Page Boulevard. J. F. McCabe, Springfield, is Gen. Mgr.

Buffalo, N. Y.—The Public Service Commission has granted permission to the International Ry. Co. to extend its line between Troy and Buffalo, to connect the Grant and Elmwood lines. J. C. Sheldon, Buffalo, is Pres. Aut.

Paterson, N. J.—The Public Service Ry. Co. has applied to the Council for permission to construct and operate an electric railway on Broadway west of Mulberry St. R. E. Danforth, Newark, is Gen. Mgr.

Brownsville, Penn.—The Monongahela Southern Traction Co. has been incorporated to construct and operate an electric railway from Brownsville to California, Penn. The incorporators are C. L. Snowden, F. B. Snowden and C. S. Story, Brownsville; Linn W. Phillips, Uniontown, and J. P. McKelvey, Pittsburgh.

Finleyville, Penn.—According to press reports the Pittsburgh & Catoctin Plateau Co. contemplates the construction of an electric railway from Finleyville to Bentleyville. P. N. Jones, Pittsburgh, is Gen. Mgr.

Waycross, Ga.—Plans have been prepared by the Waycross Street & Suburban Ry. Co. for the extension of its line from Johnson Ave. to Hebardville. N. E. Rhoads, Waycross, is Gen. Mgr. and Pur. Agt.

Columbus, Miss.—The Mississippi Light & Ry. Co. is making preliminary arrangements for the construction of an electric railway from Memphis, Tenn., to Columbus, Miss. F. W. Crisby, Columbus, is interested. Noted July 16.

Lockport, La.—The Louisiana Ry. Light & Power Co. is being organized to construct an electric railway from Lockport to Donaldville. Walter Ohlmeyer, Plattenville, is interested. Noted July 9.

Dayton, Ohio—The Dayton Street Ry. Co. contemplates the relocation of its tracks on several streets in Dayton. W. L. Smith, Dayton, is Gen. Mgr. and Supt.

Monticello, Ind.—The City Commissioners have granted a franchise to the Lafayette & Northwestern Traction Co. to construct an electric railway through White County. This is part of a proposed line to connect White, Newton, Jasper and Benton Counties. Noted May 28.

Pana, Ill.—According to press reports preliminary arrangements are being made for the construction of an electric interurban railway to connect St. Louis, Mo., and Pana, Ill. H. R. Budd, Bunker Hill, is interested.

Lincoln, Neb.—The Lincoln Traction Co. is preparing plans for the extension of its lines in Lincoln. F. M. Millson, Lincoln, is Pur. Agt.

St. Joseph, Mo.—The St. Joseph Ry., Light, Heat & Power Co. contemplates the extension of its 24th St. line on Prospect Ave., from Market to Third St. Fred E. Henderson, St. Joseph, is Pur. Agt.

Dallas, Tex.—The Fred A. Jones Co., Dallas, has started preliminary surveys for the construction of an electric railway to connect Dallas and Wichita Falls. William Doran, Dallas, is interested.

Palestine, Tex.—The City Council has granted a franchise to W. H. Brashier, Corpus Christi, to construct and operate an electric railway in Palestine. Noted Aug. 13.

Everett, Wash.—The Everett Ry., Light & Water Co. contemplates the extension of its lines on Maple and First Sts. D. C. Barnes, Everett, is Mgr.

Snohomish, Wash.—The City Council has granted a franchise to the Everett Ry., Light & Water Co., to construct an electric railway from the Northern Pacific R.R. station to Cedar St. D. C. Barnes, Everett, is Mgr.

Dixon, Calif.—The City Council has granted a franchise to the Sacramento Valley Electric Ry. Co. to construct an electric railway in the southern section of the city.

Los Angeles, Calif.—The Pacific Electric Ry. Co. has been granted a franchise to construct an electric railway on Maubert Ave., from Sunset Boulevard to Griffith Park. J. McMillan, Los Angeles, is Gen. Mgr.

LIGHT, HEAT AND POWER

Attleboro, Mass.—The Attleborough Gas Light Co. has purchased a site of 18 acres, upon which it proposes to construct new works.

New London, Conn.—The Board of Trustees of the Connecticut College for Women has awarded the contract for electric wiring and fixtures in the first group of buildings to the NEW ENGINEERING CO., New London. The cost will be between \$3000 and \$10,000. Noted July 23.

Albany, N. Y.—The following bids were received Aug. 17, by J. H. B. Hanify, Secy. of the State Hospital Commission, for the construction of a power house, boiler equipment and conduit, and plumbing for the same at the Long Island State Hospital, Brooklyn: Construction of power house, Barnett Bros., New Rochelle, \$16,956; A. Wintnitz, New York, \$47,800; Peter Keeler Building Co., Albany, N. Y., \$45,833; W. H. Egan, New York, \$32,935. Boiler equipment and conduit, E. Rutzler Co., New York, \$74,941; A. Wintnitz, \$66,000; Blake & Williams, New York, \$69,859; W. H. Armstrong Co., Albany, \$69,447. Plumbing work, Peter Keeler Building Co., \$3150. Noted Aug. 6.

Minnetonka, N. Y.—The Columbia Mills Co., manufacturer of shade cloths, will build a power plant of 12,000-hp. capacity in connection with the additions to its plant now under construction at a cost of about \$500,000.

Burlington, N. J. The Board of Public Works has awarded a contract to the Burlington Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Butler, N. J. The Board of Public Works has awarded a contract to the Butler Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Trenton, N. J. The Board of Public Works has awarded a contract to the Trenton Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Lewistown, Penn. The Board of Public Works has awarded a contract to the Lewistown Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Philadelphia, Penn. The Board of Public Works has awarded a contract to the Philadelphia Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Chatham, N. C. The Board of Public Works has awarded a contract to the Chatham Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Clarksville, Ark. The Board of Public Works has awarded a contract to the Clarksville Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Winneshore, N. C. The Board of Public Works has awarded a contract to the Winneshore Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Rock Mart, Pa. The Board of Public Works has awarded a contract to the Rock Mart Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Florence, Ala. The Board of Public Works has awarded a contract to the Florence Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Pineville, La. The Board of Public Works has awarded a contract to the Pineville Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Clemingsburg, Ky. The Board of Public Works has awarded a contract to the Clemingsburg Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Little Hill, Ky. The Board of Public Works has awarded a contract to the Little Hill Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Defiance, Ohio. The Board of Public Works has awarded a contract to the Defiance Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Loveland, Ohio. The Board of Public Works has awarded a contract to the Loveland Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Huntington, Ind. The Board of Public Works has awarded a contract to the Huntington Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Kalamazoo, Mich. The Board of Public Works has awarded a contract to the Kalamazoo Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Centerville, Mo. The Board of Public Works has awarded a contract to the Centerville Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Alton, Ill. The Board of Public Works has awarded a contract to the Alton Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Dartmouth, N. H. The Board of Public Works has awarded a contract to the Dartmouth Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Bagley, Minn. The Board of Public Works has awarded a contract to the Bagley Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Yonkers, N. Y. The Board of Public Works has awarded a contract to the Yonkers Electric Light & Power Co. for the construction of a new power plant and transmission lines. The estimated cost of the work is \$125,000.

Tunnel—Pittsburgh, Penn.—The County Commissioners, Pittsburgh, it is reported, have retained A. N. New, Hensler Bldg., Pittsburgh, to prepare plans for a tunnel to the South Hills.

Elimination of Grade Crossings—Scranton, Penn.—The Delaware, Lackawanna & Western R.R. plans to spend \$100,000 to eliminate the grade crossing at McHales Court and Court St. F. L. Wheaton, Hoboken, N. J., is Engr. Const.

Fill—Baltimore, Md.—Bids will be received until Sept. 1, by the Maryland State Roads Commission, for an earth fill, calling for 255,000 cu.yd., over the north branch of Patapsco River. O. E. Wellet, Garrett Bldg., Baltimore, is Chn.

Dock—Norfolk, Va.—The cost of the proposed public dock has been estimated at \$186,000. W. T. Brooke is City Engr.

Dredging—Jacksonville, Fla.—The contract has been awarded to the BOWERS SOUTHERN DREDGING CO., Galveston, Tex., for dredging a channel and filling a dock site in private property here. The work calls for 800,000 cu.yd.

Coal Docks—South Jacksonville, Fla.—The Florida East Coast Ry. Co. plans to construct coal docks, to cost about \$1,000,000, in South Jacksonville. E. K. Barrett, St. Augustine, Fla., is Supt. Bridges and Bldgs.

Canal—Marksville, La.—The Commissioners of Avoyelles Drainage District No. 4 have awarded the contract to TASKEL WATTS, Marksville, for constructing the Coulees Grues Canal, 17.6 cu.yd. for the upper portion and 13,756 cu.yd. for the lower portion. The work calls for 150,000 cu.yd.

Fire Alarm System—Maquenne, La.—See item under "Water Supply and Irrigation."

Drainage—Selmer, Tenn.—The contract for constructing the Lick Creek drainage canal in McNairy County has been awarded to the TUPELO DREDGING CO., Tupelo, Miss., at \$16,000.

Bath-House—Cleveland, Ohio—Bids will be received by the Commissioner of Purchases and Supplies until noon, Sept. 2, for the construction of the superstructure of the bath-house at Woodland and East 99th Sts.

Fire Apparatus—Girard, Ohio—The citizens have voted in favor of issuing \$15,000 in bonds for fire apparatus.

Fire Stations and Apparatus—Indianapolis, Ind.—The city plans to issue \$100,000 for new fire stations and for fire apparatus. B. T. P. Jeup is City Engr.

Ditch—Lagrange, Ind.—The contract has been awarded to CLYDE A. WELB, Lagrange, for constructing the Ginder Ditch in DeKalb County.

Drain—Newcastle, Ind.—Bids will be received until 1:30 p.m., Aug. 29, by C. E. Ryker, Drainage Comr., at the County Surveyor's office, Newcastle, for constructing a drain.

Ditch—Rensselaer, Ind.—Bids will be received until Sept. 16 by the County Commissioners, Rensselaer, for constructing Marble Ditch. The work calls for 5,650,000 cu.yd. of excavation. C. J. Hobbs, Kersey, Ind., is Supt. of Const.

Ditch—Valparaiso, Ind.—Bids will be received until 1 p.m., Sept. 14, by Stephen P. Corboy, Const. Comr., Valparaiso, for constructing the Cornbush Ditch. The work calls for an expenditure of \$270,000. G. F. Stinchfield, Valparaiso, is Engr.

Levee Work—Quincy, Ill.—The lowest bid opened by the Snyder Island Levee District for 130,000 cu.yd. of levee work was that of the Bonardur Construction Co., Hickman, Ky., at 37c. per cu.yd.

Mausoleum—St. Charles, Ill.—Edward Baker has awarded the contract to the THOS. MARBLE & GRANITE WORKS, Rockford, Ill., for constructing a mausoleum, at \$2,000.

Subway—Eau Claire, Wis.—The Wisconsin Railroad Commission has ordered the Chicago, St. Paul, Minneapolis & Omaha R.R. Co. to construct a subway under its tracks at the Develer St. crossing.

Ditch—Grand Rapids, Wis.—Bids will be received by Anton Brost, of E. M. Xauger & Co., Grand Rapids, at Babcock, Wis., until Sept. 4, for constructing about 23 miles of new ditch and enlarging 18 miles of the present ditch of the Cranberry Creek Drainage District.

Drainage—Grand Rapids, Wis.—The Wood County Drainage District contemplates an issue of bonds for \$40,000, the proceeds of which will be used for additional drainage improvements. B. G. Chandos is Secy.

Flood Channel—Burlington, Iowa—The contract for constructing the Market St. flood channel has been awarded by the city to E. E. HICK, Burlington, at \$77,000.

Drains—Forest City, Iowa—The Commissioners of Emmet, Wabago and Kosciusko Counties have awarded contracts for drains in Joint Drain Districts 35 and 89, as follows: Labor, to the INTERSTATE DRAINAGE CO., Britta, Iowa, at 8c. per cu.yd. of levee work to E. P. SEBASTIAN, W-ster City, Iowa, at \$69,112.

Ditch—Albert Lea, Minn.—Bids will be received until Aug. 29 by C. E. Brainerd, County Audr., Albert Lea, for constructing a ditch to cost \$16,500.

Motorhome—Hiawatha, Kan.—The Hiawatha Fair Association plans to construct a motorhome.

Drainage—Curtis, Neb.—(Official)—Bids will be received by the Board of Supervisors of Drainage District No. 1 of Frontier County, at the office of the Secretary, W. H. Latham, Curtis, until 5 p.m., Sept. 8, for constructing drainage ditches in the district. Approximately 12,000 cu.yd. of ditching will be required. D. O. Nelson is Chn. Bd. of Supervisors.

Levees—Poplar Bluff, Mo.—The Morgan Engineering Co., Memphis, Tenn., has prepared plans for drainage and protection work in Inter-River Drainage District. The work calls for about 35 miles of levees.

Ditch—Bay City, Mich.—Bids will be received until Sept. 12 by E. N. Gustafson, Engr., Bay City, for ditches for Dist. 5. The work calls for 255,000 cu.yd. of excavation.

Shelter House—Dallas, Tex.—Bids will be asked until Aug. 28, by the Park Board for constructing a shelter house. Estimated cost, \$25,000. J. M. Preston is City Engr.

Fuel Pier—Galveston, Tex.—The Clinchfield Fuel Co., Spartansburg, S. C., plans to construct a large coal pier at Galveston.

New Brunswick, N. J.—Alexander Merchant, Chn. of Bldg. Com., Board of Education, will receive competitive plans for constructing a high school, to cost about \$150,000.

Pasadena, N. J.—It is reported that bids will be received by the Board of Education until Sept. 8, for constructing a three-story and basement school. John P. Kelly, Post Office Bldg., is the Archt.

Forest City, Penn.—The contract for building the two-story school has been awarded to the HOLT LUMBER CO., 61 North Main St., at about \$40,000. Percival J. Morris, Burr Bldg., is the Archt.

Philadelphia, Penn.—The lowest bid submitted for the Girls High School, at Broad St. and Snyder Ave., was from Cramp & Co., at \$518,518. Noted Aug. 6.

The "Friends Book Store" will build a six-story, 40x80-ft. steel and brick commercial building at 304 Arch St. Morris & Erskine are Archts.

Pittsburgh, Penn.—The general contract for erecting the William Penn hotel has been awarded to the GEORGE A. FULLER CO., Oliver Bldg. The building will be 20 stories, 130x216 ft., and is estimated to cost \$3,000,000. Janssen & Abbott, Century Bldg., prepared the plans.

Plans are being prepared by Schmid & Holmes, 154 West Randolph St., Chicago, for a three-story and basement temple for the Syria Temple congregation. The estimated cost is \$300,000.

Rochester, Penn.—The Board of Education contemplates the construction of a high school to cost about \$100,000. George H. Karcher is Secy. of the Board of Education.

Roanoke, Va.—Bids will be received until Sept. 15, by the city, for the construction of a city hall and court house, from plans by Fry & Chesterman, Roanoke. The building will be of granite, terra cotta and stone and is estimated to cost \$280,000.

Sulphur Springs, Va.—The South Bluefield Land Co. and Bluefield-Graham Fair Association are reported interested in erection of a hotel near this place. A. B. Hahood, Bluefield, is Archt. The estimated cost is \$150,000.

Greenville, S. C.—The School Board is having plans prepared for building a high school, to cost about \$45,000.

Chattanooga, Tenn.—The citizens have voted \$200,000 in school bonds and \$100,000 in bonds for improving the Erlanger Hospital.

Chattanooga, Tenn.—R. H. Hunt, Chattanooga, has completed plans for a church and office building to be erected for the Episcopal Church at Georgia Ave. and East Seventh St., to cost \$260,000.

Mount Sterling, Ky.—Weber, Werner & Adkins, Mercantile Library Bldg., Cincinnati, Ohio, are preparing plans for a five-story and basement hotel for Henry C. McKee. The estimated cost is \$35,000.

Clarksburg, W. Va.—Edward J. Wood, Archt., Lowndes Bldg., is preparing plans for a two-story and basement hotel for Mrs. A. J. Coleman, Clarksburg. The estimated cost is \$45,000.

Cleveland, Ohio—The Jewish Hospital Assn., Cleveland, is having plans prepared for the construction of a new building at Arsenal Rd. and East 107th St. The estimated cost is about \$400,000. George B. Post & Sons, New York, N. Y., have prepared the plans.

Mayor Newton O. Baker is reported to be in favor of a plan to build an auditorium, concert and dance hall at Gordon Park. The cost will be \$50,000.

Western Reserve University is having plans prepared for a building to be used as the dental college. It will be a four-story building, and estimated to cost about \$100,000. Franz C. Warner, 718 Prospect Hippodrome Bldg., is the Archt.

The contract for the erection of St. Colman's Church, at West 65th St. and Lawn Ave., has been awarded to ANDREWS BROS. Bldg. Co., Cleveland. The estimated cost is \$250,000. E. J. Schneider, Cuyahoga Bldg., Cleveland, is the Archt.

Bids will be received by Ralph M. Hulet, Archt. and Engr., for the construction of the proposed German clubhouse, estimated to cost about \$50,000.

The Hellman Realty Co. is having plans prepared for a six-story, 100x200-ft. store building, to be erected at 2037 East Ninth St. The estimated cost is \$370,000. Robert D. Kohn, 56 West 45th St., New York, N. Y., is the Archt.

The New York, Chicago & St. Louis Lty. Co. is having plans prepared for a terminal building, two stories, 100x300 ft., at Erie Ave. and Erie St. The estimated cost is \$250,000. E. B. Hart, 412 Hickory Bldg., Cleveland, is Ch. Engr.

Columbus, Ohio—Bids will close at noon, Aug. 28, for the construction of a five-story clubhouse for the Athletic Club of Columbus. The estimated cost is about \$350,000. Richards, McCarty & Bulford, Hartman Bldg., are the Archts. M. D. Stouffer, 8 East Long St., is Secy. and Mgr.

Dayton, Ohio—The Cleveland, Cincinnati, Chicago & St. Louis Lty. Co. is contemplating the erection of a terminal in this city, to cost about \$200,000. George P. Smith, Cincinnati, is Ch. Engr.

Findlay, Ohio—\$300,000 in bonds have been voted by the citizens for the erection of two schools.

Montpelier, Ohio—Bids will be received until Aug. 24, by Huber & Gamble, Archts., Toledo, for constructing the proposed high school. The estimated cost is about \$60,000.

Xenia, Ohio—The Springfield Building & Loan Assn. has awarded the contract for the construction of its granite building to the GEORGE DODDS & SONS MARBLE & GRANITE CO., at \$75,000.

Greencastle, Ind.—The Board of Education contemplates the erection of a two-story high school, to cost about \$60,000. H. L. Bass & Co., 801 Hume-Mansur Bldg., Indianapolis, Ind., is the Archt.

Hay City, Mich.—Plans are being prepared for the construction of a three-story, 90x92-ft. Y. M. C. A. building, estimated to cost about \$45,000. Clark & Munker, Bay City, Mich., are the Archts.

Detroit, Mich.—All bids for the construction of the Detroit Home of Detention have been rejected and new bids will be called for. The cost limit has been raised from \$128,000 to \$230,000. New bids shall include estimates for construction and furnishing in its entirety.

The Wayne County & Home Savings Bank has had plans prepared for a seven-story building, to be erected at Michigan and Griswold Sts. The estimated cost is \$200,000. Donaldson & Meier, Detroit, are the Archts.

Menominee, Mich.—The Board of Education will receive bids until Aug. 30, for the construction of a three-story, 128x300-ft. school. Estimated cost, about \$52,000. Derrick Huber, Menominee, is the Archt.

Nazareth, Mich.—The Nazareth Academy is having plans prepared for the construction of a three-story, 100x55-ft. school, estimated to cost about \$75,000. C. A. Fairchild, 150 South Burdick St., Kalamazoo, Mich., is the Archt.

Chicago, Ill.—Auburn Park Lodge, No. 759, is having plans prepared for a four-story, 80x105-ft. Masonic Temple, estimated to cost \$75,000. Robert M. Hyde, 110 South Dearborn St., is the Archt.

Freeport, Ill.—The Freeport Y. M. C. A. is ready to receive bids for the construction of a three-story building. The estimated cost is about \$125,000. Shattuck & Hussey, 19 South La Salle St., Chicago, are the Archts.

Joliet, Ill.—The contract for the construction of the Joliet High School has been awarded to ALFRED WENBERG & SON, Joliet, at \$33,000. Graham, Burnham & Co., 80 East Jackson Blvd., Chicago, are the Archts. Noted July 9.

Peoria, Ill.—The Illinois Traction Co. has awarded the contract for the construction of work on its terminal building to J. JOEST & SONS, Peoria. THE DECATUR BRIDGE CO. was awarded the contract for the steel work. The estimated cost of the building complete is about \$450,000.

Butternut, Wis.—The general contract for the new high school has been awarded to CHARLES BLOSS, Ashland, Wis. The estimated cost is about \$60,000. Henry Widhagen, Ashland, is the Archt.

Madison, Wis.—The contract for the erection of Christ Church has been awarded to T. C. MCCARTHY. The estimated cost is about \$70,000.

Marquette, Wis.—Bids will be received until Sept. 8, by A. Z. Whitcomb, Secy. of the Board of Education, for the construction of the new high school. The estimated cost is \$120,000. John D. Chubb, 109 North Dearborn St., Chicago, Ill., is the Archt.

Milwaukee, Wis.—The following bids were received for the construction of the \$600,000 Milwaukee County House of Correction: Engineering Co., \$173,750; Riesen Co., \$234,693; Coddington Engineering Co., \$235,600; Dahlman Construction Co., \$304,355; Raulf Construction Co., \$245,000; Monsted Construction Co., \$258,159. Noted July 23.

Milwaukee, Wis.—Milwaukee County is planning to erect a new courthouse to be 12 to 16 stories. The estimated cost is about \$2,000,000. Bids on the site have been received. L. G. Widule is County Clerk.

Oshkosh, Wis.—Bids will be received until Aug. 31, by C. R. Fiss, Secy. Bldg. Com., for the construction of the County Tuberculosis Sanitarium. Henry Auler is the Archt.

Ames, Iowa—The State Board of Education, Des Moines, plans to erect at the Iowa State College, an animal husbandry building to cost \$80,000, and a bacteriology and zoology building to cost \$65,000.

Burlington, Iowa—The Board of Education is having plans prepared for a two-story school, to be known as the Charles Elliot Perkins School. The estimated cost is \$50,000. Eckland & De Arment, Moline, Ill., are the Archts.

Davenport, Iowa—The St. Luke's Hospital Board has purchased a site where a hospital will be erected at an estimated cost of \$100,000.

Minneapolis, Minn.—The contract for the construction of a four-story school and dormitory building for the Catholic Orphan Asylum has been awarded to the HAGLIN-STAHR CO., at \$52,000.

The City of Minneapolis is having plans prepared for the construction of a one-story, 35x90-ft. library. The estimated cost is \$40,000. Edward M. Tilton, 22 Broadway, N. Y., is the Archt.; Chapman & Magney, 509 Essex Bldg., Minneapolis, Assoc. Archts.

Lincoln, Neb.—The Acme Amusement Co. will have its plans revised again for the construction of the Orpheum Theater. The estimated cost is about \$60,000. The Carl Boller, Gayety Theater Bldg., Kansas City, Mo., is the Archt.

Kansas City, Mo.—The Board of Education is having plans prepared for the construction of a one-story, 160x154-ft. school in Swope Park. Cost about \$75,000. C. A. Smith, Finance Bldg., is the Archt.

St. Louis, Mo.—The Missouri Athletic Club contemplates the erection of a clubhouse at Fourth and Washington St., estimated to cost about \$600,000.

Austin, Tex.—The contract for building the new home of the Austin Public Library has been awarded to FISHER & LAMBLE, Austin. The estimated cost is \$55,000. C. H. Page & Bro., are the Archts.

Dallas, Tex.—The Central Presbyterian Church has had plans prepared for a church to be known as the "City Temple," to be erected on North Akard and Hurlington St. Estimated cost, about \$200,000.

The Chain Belt Co., Milwaukee, Wis., has recently appointed the Ward Equipment Co., 331 Fourth St., Pittsburgh, as its agent in Pittsburgh and vicinity for the Ward Equipment Co. will handle the Chain Belt Concrete Mixer, the Chain Belt Paver and the Chain Belt Elevators, Conveyors and Distributing Systems.

The C. & C. Electric & Mfg. Co., Garwood, N. J., makers of electric motors, generators and electric arc-welding equipment, has opened a branch sales office at Minneapolis, Minn. This office will be in charge of R. L. Wells.

Contracts to Be Let

Bids received until Sept. 18, 1914.

Judicial Sale

of the Assets of
THE CANADIAN MINERAL RUBBER COMPANY, LIMITED
In the matter of the Winding-Up Act, being Chapter 144 of the Revised Statutes of Canada and Amending Acts, and in the matter of the Canadian Mineral Rubber Company, Limited.

Sealed tenders will be received addressed to "George O. Albion, Esq., Master-in-Ordinary, Osgoode Hall, Toronto, Canada," and marked "Tenders in the matter of The Canadian Mineral Rubber Company, Limited," up to 2:30 p.m. of Friday, the 18th day of September, 1914, for the purchase of certain assets of the said Company consisting of—

PARCEL NO. 1—Located at Model City, adjoining Montreal, and at Sorel, Que.

Common asphalt paving plant, railroad type, and sundry accessories including rollers, concrete mixers, tank cars, tools, etc., etc.

PARCEL NO. 2—Located at Winnipeg, Manitoba.

Roofing and flooring material and equipment, paint, piping, heating, office furniture, safe, etc., etc.

PARCEL NO. 3—Located at Calgary, Alberta.

Merriman asphalt paving plant, railroad type, and sundry accessories, including roller, stone crusher, concrete mixers, hoisting engine, tools, asphalt, cobbles, office furniture, etc., etc., together with a certain lease of dredging rights for sand and gravel, the liabilities under which must be assumed by the purchaser.

PARCEL NO. 4—Located at Vancouver, British Columbia.

Common asphalt paving plant, railroad type, and sundry accessories, including rollers, stone crusher, concrete mixers, hoisting engine, tools, asphalt, rock, office furniture, motorcycle, etc., etc.

PARCEL NO. 5—Located at New Westminster, British Columbia.

Merriman asphalt paving plant, railroad type, and sundry accessories, tools, etc., etc.

PARCEL NO. 6—Located at Victoria, British Columbia.

Merriman asphalt paving plant, railroad type, and sundry accessories, including rollers, concrete mixers, graders, automobiles, tools, supplies, office furniture, etc., etc.

PARCEL NO. 7—Located in the State of Utah, U. S. A.

Certain claims and mining rights covering a deposit of practically pure bitumen (gilsonite) and bituminous limestone.

Possession. Immediate possession of parcels Nos. 1, 2, 3, 4, 5, and 7 can be given on completion of sale. Possession of parcel No. 6 cannot be given until certain paving at the City of Victoria, B. C., in which the Liquidator is at present engaged, is completed. If, before the completion of the sale, the purchaser requires possession of any parcel, of which possession can be given by the Liquidator, he may obtain same by giving security for the unexpired payments satisfactory to the Master-in-Ordinary of the Supreme Court of Ontario. Tenders must be made on the understanding that inability on the part of the Liquidator to deliver possession of, or transfer the title to any item shall operate as a cancellation of the sale in respect of such item only, and shall not operate as a cancellation of the sale as a whole. The amount of any allowance to be made in respect of any such item shall be determined by the Master-in-Ordinary of the Supreme Court of Ontario.

Tenders will be received for all parcels on bloc and for each parcel separately.

All rentals, taxes, insurance, water rates, and similar items will be allocated to the date of the acceptance of the tender.

Full information as to all parcels with inventories of parcels Nos. 1, 2, 3, 4, 5 and 6, and a schedule of the claims and mining rights included in parcel No. 7, and copies of the Lease of Mineral in Parcel No. 2, may be obtained from the Liquidator.

NATIONAL TRUST COMPANY, LIMITED, TORONTO,
CANADA

Terms of Payment. Ten per cent. of the amount tendered shall accompany each tender. 15% on the acceptance of the tender, and the remainder in 2 equal installments at 1, 4 and

9 months without interest. On receipt by the Liquidator of the final payment, the sale shall be completed. All tenders must be accompanied by an accepted cheque payable to the Liquidator for 10 per cent. of the amount of the whole tender, which cheque will be returned if the tender is not accepted, and forfeited if the tender is accepted, and purchase not completed by the tenderer.

The highest or any tender not necessarily accepted.

The purchaser shall, at his own expense, make whatever search of title he may deem necessary or expedient, and the Liquidator shall not be required to furnish any abstracts or produce any deeds, declarations, or other evidence of title except those in his possession. The purchaser shall have 15 days from the date of acceptance of tender within which to make any objections or requisitions in respect of the title and in case the purchaser shall, within such time make any objection or requisition which the Liquidator shall from any cause, be unable or unwilling to remove or answer, then the Liquidator may (notwithstanding any intermediate negotiations) rescind the sale, in which case the purchaser shall be entitled only to a return of the deposit money without interest, costs or compensation.

The other conditions will be the standing conditions of sale of the Supreme Court of Ontario, as far as applicable.

Tenders will be opened at the office of the Master-in-Ordinary, Osgoode Hall, Toronto, Ont., at 2:30 p.m. on the 18th day of September, 1914, when all tenderers are requested to be present.

Dated at Toronto, this 16th day of July, 1914.

NATIONAL TRUST COMPANY, LIMITED,
Toronto, Ontario, Canada,

Liquidator.

X

Bids received until Sept. 1, 1914.

State Highway Improvements

NOTICE TO CONTRACTORS—State of New York—Office of the State Commission of Highways, Albany, N. Y.—Pursuant to the provisions of chapter 30, 1909 as amended by chapter 416, Laws of 1911 and chapter 80, Laws of 1913, sealed proposals will be received by the undersigned at their office, No. 35 Lancaster street, Albany, N. Y., at 1 o'clock p. m. on Tuesday, the 1st day of September, 1914, for the improvement of the following highways:

County	Rd. No.	Name	Approx. Length
Albany	5112-B	Cuba - Friendship, Part 2	0.17 Mi.
Essex	1037-A	Goewanda Village	0.30
Fulton	5170-A	Schoon Lake - No. Hudson Part 1	6.77
Nassau	1291	Huntington Town Line - Farmingdale, Part 2	0.61
Ontario	5511	Cuba - Holcomb	5.87
Rensselaer	5512	New Jersey State Line - Nysack, Part 1 and 3	3.73
Rensselaer	5580	Holcomb - West Haverstraw	1.56
St. Lawrence	975-A	Marietown - Hammond, Part 2	3.39
Wayne	5591	Geneva - Lyons, Part 3	2.90
Wyoming	5545-A	Warsaw - Unionville	0.48
Wyoming	975	Java Village - Wake	3.32

REPAIRS

Rep. Dist. No.	Class of work	Rd. No.	County	Name	Town
600	H. C. T. Cold Appl. No. guarantee	5341	Albany	Friendship-Belmont	Friendship and Amity
608	I. C. T. Hot and Cold Appl. No. guarantee	5230	Schenectady	Central Square-Union Square, Part 1	Hastings
631	Brick guaranteed	77	Rensselaer	Albion - Wynantskill	Rensselaer and North Greenbush

Maps, plans, specifications, estimates and proposal forms may be obtained at the office of the Commission, in Albany, and also at the office of the Division Engineer in whose division the work is to be done. The specifications and proposal forms contain all the terms under which bids are received.

The right is reserved to reject any or all bids.

JOHN N. CARLISLE,
Commissioner.

D. K. FULLER,
Secretary.

Construction News

★Denotes work advertised in ENGINEERING NEWS.

†Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

CLEARING OF BUSINESS SKIES

Order is coming out of chaos and the financial storm, caused by the stupendous demand for gold from abroad, has abated. Conditions though still highly sensitive, are improving. Exchange with Europe is obtained only at abnormal prices, but it is possible to do business. Domestic finance is in better condition. It will be many months before order even in this country is restored, but how usual values will be depreciated depends on the authorities. Certainly bankers are acting with far more skill and patriotism than they did seven years ago. Interest rates are extremely high. In New York, at least, trust companies refuse to make building loans.

The importation of foreign materials used by American consumers and manufacturers has been largely curtailed, but ocean traffic is gradually augmenting and trade with England, France, Italy and the far East will probably soon be restored. Some very severe competition is cut off for the present because Germany is unable to ship to this country.

Exports of food stuffs are resuming. It will not be long before other commodities also can be sent to foreign buyers. The cotton shipments, which in a large measure offset our unfavorable balance of trade each year are held up and must be held up for some time.

Domestic trade has slowed down appreciably. The cutting down of individual expenditures has had its effect in all lines. The buying of food stuffs in anticipation of higher prices and the reducing of lines of desirable merchandise by drastic cuts is evident. Stocks, however, are not heavy in any line, neither has there been any marked expansion among distributors.

The agricultural situation calls for closer observation now than it has in a number of years. The wheat crop is practically the largest on record, and the corn crop, while somewhat of a disappointment compared with that of 1911, is still well above the 10-year average. Those of other grains and hay are large. It must be remembered that grain raising has been abandoned in many localities for general farming, and while the output of corn in bushels may not be as great the food stuff raised for cattle is much larger than ever before and moreover it is evident that there are more cattle in the country now than a year ago. Wheat prices advanced rapidly the last two weeks of August, but since that time have eased off appreciably. It is possible that the highest prices will not be reached until next year.

Business Gains and Losses

New factories will come into being in many diversified lines. A leading importer of ball bearings is building a factory in Philadelphia to employ at least 1600 men to make ball bearings by automatic machinery. Worcester, Mass., toy manufacturer has recently doubled the capacity of his plant; a Massachusetts engineering firm has taken an order for a coal-handling plant for Australia. American manufacturers are accustomed to doing it. Tools of other countries can be produced in this country. Numerous additions to manufacturing plants must be made as a result of the European upheaval.

A few catalogues in English, some mimeograph letters in poor Spanish and a list of addresses from a New York mailing house will not bring trade from South America. The money and time that have been wasted in trying to make the people of South America step up and buy what American merchants want to sell is appalling. There is business there, but it's trade and not orders. To secure business of any kind it must be done the way the inhabitants of those countries are accustomed to doing it. Tools must be supplied for their units, not ours; their needs must be studied. It is a fertile field, rich in possibilities and will bring tremendous returns to the few who are going to secure it but it is no bonanza and must be won. In Chicago, for instance, there are at least a dozen different firms, each with a capital of over \$1,000,000 who have been trading in South America for a decade or more.

The railway rate decision was not what the railroads expected, or at least hoped. It, however, did grant them a grain of comfort. While three of the commissioners signed applications of the railroads for higher rates it was vetoed in toto by the entire commission.

Municipal work will be slow until there is more assurance about what the boards. The City of New York has decided to go ahead with the subway, but the question, or at least as much of it as will enable the parts question, or at least to be operated. There seems to be comparatively little banks or sinking fund commissions, but a number of high-note bond applications turned down by bankers have been notable. The inclination of the investing public to buy municipal bonds is one of the things which bears the most important watching.

Providing suitable laws are enacted, there is every reason to believe that a number of vessels now owned by American corporations will fly the American flag. The question of the government going into the ocean-cable trade is one of great danger and to say the least it seems a very serious matter for the Federal government to buy high speed painting messenger vessels designed for lucrative traffic in the North Atlantic, when there is little possibility of much traffic of this character for several years to come. The mobility of shipping and the ability of one boat to carry

more tons in a year due to the Panama Canal should not be lost sight of, but it is a notable fact in the history of this country that whenever better methods of transportation have been provided, the traffic has soon grown in proportion to the facilities.

Price Changes

Extreme fluctuation in tin has marked the course of that market during the month. Copper, early depressed in the failure of Europeans to buy recovered some of the loss. In spite of the shortage of ferro-manganese, there will be sufficient steel to meet the demand although prices are from \$1 to \$3 higher above the low level. No change was made in belting, but rubber is higher and all lines seem destined to go higher for the present.

CEMENT, LIME AND BRICK

Portland Cement—Prospects are brighter for a good winter business in cement than in many years. The Valparaíso docks will require half a million dollars worth of cement. Cable inquiries are coming to American manufacturers, asking "How soon can you ship 5000 bbl." Price is a secondary consideration. It is estimated that South America and the West Indies will require in the next year 13,000,000 bbl. of cement, which will take the surplus production of the Lehigh Valley District. Strenuous efforts are being made, not only to secure the business which is dropping into the laps of American manufacturers, but to put it on such a footing that it can be held for all time. Despite reports to the contrary, prices have not changed. In New York there is a falling off in the demand at present, with the feeling that trade during the winter will be exceptionally dull. This is scarcely true, however, for the winter work will go forward as usual. A hand on July 1 were 10,000,000 bbl., compared with 11,200,000 at the end of December. This is larger than it should be, but not unusual. Production during the first half of the year up to December 31, 1913, showed a shortfall of 4,000,000 bbl. compared with the previous year, being 25,000,000 bbl. Practically half of the falling off was in the Lehigh Valley District, which produced in the first half of the year 1,000,000 bbl.

Quotations in the East are unchanged at \$1.50 per bbl. for delivery within lighterage limits of New York. This is equivalent to \$1.46 Jersey City, and 95c. per bbl. in bulk at the mill.

The quotations given below do not include the allowance of 40c. made for bags returned. These quotations are as follows, per bbl., f.o.b. the points named: Boston, \$1.32; Cleveland, \$1.35; Duluth, \$1.38; Minneapolis, \$1.40; Pittsburgh, \$1.15; Chicago, \$1.17; Detroit, \$1.24; Jersey City, 1.06; New York, 1.13; St. Paul, \$1.40.

IRON AND STEEL

Pig Iron—New business in pig iron is not large, and cancellations of contracts or requests for deferred shipment are few. The cast-iron pipe interests bought up approximately 60,000 tons of Southern Foundry iron; prices have not changed, and trade is purely a waiting one. It is evident that there will be no strenuous foreign competition for some time, and on the other hand, there are likely to be some foreign inquiries. Production has not been seriously curtailed. Business during August would undoubtedly have been small in any event, for July business was exceptionally large.

Quotations for lots of 100 tons and over are as follows at the points named: Cincinnati, Southern Foundry No. 2, \$13.25; Northern Foundry No. 2, \$14.25; Northern Foundry No. 3, \$14.00 to 14.25. In New York, Northern Foundry No. 2N is \$14.00 to 14.65. No. 2 plain, \$14.25 to 14.50; and Southern Foundry No. 2 is \$14.25 to 14.50. In Chicago, Northern Foundry No. 2 is \$14.00 to 14.00. In Pittsburgh, Bessemer is \$14.90, and basic \$12.90. These quotations include the 90c. freight rate from the valley to Pittsburgh. In Birmingham, Southern Foundry No. 2 is \$10.00 to 10.25.

Steel Rails—Business has been extremely limited. None of the large railroads in this country have entered orders for any quantity of rails, and export business has been light. It is true that some orders have been taken for export but most of these were of light rails, and the demand for heavy rails is not large. Quotations for lots of 500 tons or over are given below. For smaller lots, somewhat higher prices are demanded.

Standard sections of Bessemer rails, 22½; open hearth rails, 30. These quotations are f.o.b. Pittsburgh. Glider rails in 30-ft. lengths are \$36.40 per gross ton, and in 60-ft. lengths, \$36.00, both f.o.b. New York. Standard open hearth rails are \$1.34 per 100 lb. In Pittsburgh, Bessemer rails, 22½; open hearth rails, 25 to 15 lb. per yd. are \$1.25, Pittsburgh or Chicago; 16 to 20 lb., \$1.30; 12 lb., \$1.35; 8 lb., \$1.40. These quotations are f.o.b. New York, Pittsburgh and Chicago. Re-laying rails are \$23 to \$24, Chicago, for standard section, and \$21.50 to 22.50 for light section.

Truck Supplies—Business has been extremely light, although some export inquiries have been received. The mills are running at less than 50% of capacity. Standard section angle bars in Pittsburgh and Chicago are 1.50; spikes in Pittsburgh are \$1.10 to 1.45 for standard, and \$1.50 to 1.60 for light, while in Chicago railroad spikes are at \$1.50. Truck bolts in Pittsburgh and Chicago are \$2.00. All of these are per keg of 160 lb.

RAILWAYS

✚Pennsylvania—Pennsylvania R.R.—A. L. ANDERSON & BROS., INC., Altoona, Penn., has been awarded a contract by this company for constructing a 3½ mile extension of the Homer and Cherrytree branch of the Conemaugh division.

West Virginia—Charleston, Parkersburg & Northern Ry.—Preliminary arrangements are being made by this company to award contracts for the construction of a portion of its proposed railroad to connect Charleston, W. Va., and Parkersburg, about 15 miles. H. H. Archer is Pres. and K. C. Stetson, Secy., both of Parkersburg, W. Va.

North Carolina—Southern Ry.—Bids are being received by this company for double-tracking its line from Craggy, N. C., to a point two miles east of Marshall, N. C., about 15 miles. W. H. Wells, Washington, D. C., is Ch. Engr. Const.

✚North Carolina—Southern Ry.—A contract for constructing 30 miles of second track between Pelham and Greensboro, N. C., has been awarded by this company to the PARKER BROOKS CONSTRUCTION CO., Greenville, S. C., and to the MORROW CONTRACTING CO., Atlanta, Ga. Noted Aug. 20.

South Carolina—According to press reports, plans are being prepared by this company for the construction of a railroad from Lillington, N. C., to Swansboro, N. C., about 100 miles. W. J. Edwards, Sanford, N. C., and J. R. Baggett, Lillington, N. C., are interested.

South Carolina—Savannah Western Ry.—This company has been incorporated to construct a railroad from Estill, S. C., to St. Paul, S. C., about 90 miles. The incorporators are Virgil Walker and Adrian M. Rea, Newbern, N. C., and C. H. Milligan, Charleston, S. C.

South Carolina—According to press reports, C. D. Neal, Wilmington, N. C., is interested in the construction of a railroad from Hartsfield, S. C., to Society Hill, S. C., about 18 miles.

Florida—Edge-Dowling Lumber Co.—The construction of a railroad for its lumber operations at Groveland, Fla., to Dade City, Fla.

Mississippi—Nashville, Shiloh & Corinth R.R.—See item under Tennessee.

Tennessee—Nashville, Shiloh & Corinth R.R.—The citizens of Davidson County will vote on the proposition to issue bonds for the purpose of assisting this company in constructing a railroad from Nashville, Tenn., to Corinth, Miss., about 165 miles. C. C. Thoms, Corinth, Miss., is interested. Noted July 16.

Indiana—Cincinnati, Indiana & Louisville R. R.—Surveys have been started by this company for the construction of a railroad to connect Aurora, Rising Sun, Patriot, Florence, Markland, Vevay and Lamb, Ind., where a connection with the Louisville & Beaver River R.R. will be made. L. S. Cook is Pres.

Kansas—Atchison, Topeka & Santa Fe Ry.—This company plans to spend \$40,000 for the extension of its yards at Florence, Kan. R. A. Rutledge, Kan., is Ch. Engr. Eastern lines.

✚Arkansas—Missouri, Arkansas & Southern R.R.—This company has awarded a contract for the construction of a railroad from Mena, Ark., to Hot Springs, Ark., about 80 miles, to the CENTURY CONSTRUCTION CO., Mena. George D. Thayer, Mena, is Ch. Engr. Noted Aug. 6.

Texas—Gulf, Freeport & Northern R.R.—Plans are being prepared by this company for the extension of its line from Freeport, Tex., to Rosenberg, Tex. C. L. Sharp, Freeport, is Gen. Mgr.

Idaho—Blackwell Lumber Co.—Plans are being prepared by this company for the construction of about five miles of logging road at Fernwood, Idaho.

Oregon—Teal Creek R. R.—This company has been incorporated to construct a logging railroad out of Fall City, Ore. The incorporators are F. J. Cobb, Zera Snow and Wallace McCamant.

California—Atchison, Topeka & Santa Fe Ry.—An expenditure of \$200,000 is planned by this company for the improvement of the lines on its Los Angeles Division. F. M. Bisbee, Amarillo, Tex., is Ch. Engr. Western lines.

ELECTRIC RAILWAYS

Holyoke, Mass.—The Holyoke Street Ry. Co. plans to spend about \$15,000 for laying a new track for the Williamsett Bridge through Holyoke. Louis D. Peillissier, Holyoke, is Gen. Mgr. and Pur. Agt.

New Haven, Conn.—The Shore Line Electric Ry. Co. has been granted permission to extend its line from Backus Corner to Salem Turnpike. Samuel Anderson, Norwich, is Gen. Mgr.

Bayport, N. Y.—The Suffolk Traction Co. has applied to the Public Service Commission of the Second District for permission to construct an extension to its line from Bayport to Sayville. J. C. Brackenridge, 95 Liberty St., New York, N. Y., is Gen. Mgr. and Ch. Engr.

New Brunswick, N. J.—The Board of Chosen Freeholders has granted the Public Service Co. permission to extend its system in Highland Park. R. E. Danforth, Newark, is Gen. Mgr.

Washington, Penn.—The Borough Council has granted a franchise to the Monaca, Leola, Ellsworth & Washington Ry. Co. to construct and operate an electric railway on certain streets in the borough.

York, Penn.—George B. Wilson, H. S. Williamson and Allen A. Herr are interested in the construction of an electric railway along the Harrisburg Pike to Long Park and the fair grounds.

Hagerstown, Md.—Plans are being considered by the Hagerstown & Frederick Ry. Co. for the extension of its line to the Country Club. Franz Von Schilling, Hagerstown, is Gen. Mgr.

Salisbury, Md.—The Salisbury Interurban Ry. Co. plans to start work soon on the construction of its proposed electric railway to connect Salisbury, Heron, Tynskin, Blivale and Nanticoke, about 30 miles.

Covington, Ga.—Preliminary arrangements are being made by the Covington & Oxford Street Ry. Co. for the construction of an electric railway from Covington to Oxford. Noted Jan. 22.

Hopkinsville, Ky.—R. E. Cooper has purchased a franchise from the city to construct and operate an electric railway in Hopkinsville. Noted Feb. 12.

Chauncey, Ohio—The Hocking-Sunday Creek Traction Co. contemplates a bond issue for \$150,000, the proceeds of which will be used for the construction of an electric railway from Chauncey to Athens, about 7½ miles. E. B. Young, Nelsonville, Ohio, is Pres. and Gen. Mgr.

Indianapolis, Ind.—Plans are being prepared by the Indianapolis Traction & Terminal Co. for the extension of its line on West Tenth St. from Holmes to Tibbs Ave. R. R. Smith, Indianapolis, is Pur. Agt.

Monroe, Mich.—The Toledo, Ottawa Beach & Northern Ry. Co. has been granted permission to extend its electric railway through Monroe. F. R. Coates, Toledo, Ohio, is Pres. and Gen. Mgr.

Peoria, Ill.—The Peoria Ry. Co. has applied to the City Council for a franchise to double-track its lines on Pennsylvania Ave. from Jackson St. to Indiana Ave. R. W. Bailey, Peoria, is Gen. Supt.

Rock Falls, Ill.—The Rock Falls & Southern Traction Co. is considering plans for the construction of an electric railway to connect Sterling, Laas, Rock Falls, New Bedford, Tampico, Princeton, Setonville and Kewanee. Andrew S. Goodell, Rock Falls, is Secy.

New Duluth, Minn.—Plans are being considered by the Duluth Traction Co. for the construction of a two-mile extension to its line in New Duluth. Herbert Warren, Duluth, is Vice-Pres. and Gen. Mgr.

Kansas City, Mo.—Plans are being considered by R. A. Long and associates for the construction of an electric railway to connect Kansas City, Lees Summit, Pleasant Hill and Harrisonville.

Dallas, Tex.—The City Commission has granted a franchise to John T. Jones and associates to construct and operate an electric railway in East Dallas.

Salt Lake City, Utah—The City Commission has granted a franchise to the Utah Light & Ry. Co. for the construction of an electric railway on Fifth and Seventh South Sts. Joseph S. Wells, Salt Lake City, is Gen. Mgr.

Tacoma, Wash.—See item under Miscellaneous: Rails, Tacoma, Wash.

Milwaukee, Ore.—The City Council has granted a franchise to L. H. Cammell to construct and operate an electric railway in Milwaukee.

✚Fresno, Calif.—The Fresno Interurban Ry. Co. has awarded a contract to MAHONEY BROS., San Francisco, for constructing the second unit of its line from Alvin Heights to Clovis. Noted June 18.

Stockton, Calif.—The Stockton Electric R.R. Co. has been granted franchises to construct double track extensions to its lines in San Joaquin County. Frank W. Webster, Fresno, is Gen. Mgr. and Pur. Agt.

Visalia, Calif.—The Visalia Electric R.R. Co. will construct a two-mile extension from Rose Station to Elderwood. Frank W. Webster, Fresno, is Gen. Mgr.

Edmonton, Alta.—The Tramways Co., Ltd., has recently been organized for the purpose of constructing an electric railway from Edmonton to Fort Saskatchewan, about 18 miles.

LIGHT, HEAT AND POWER

Albany, N. Y.—(Official)—Bids will be received until 2 p.m., Sept. 10, by the Trustees of Public Buildings, Capitol, Albany, for installing and erecting ventilating apparatus, plumbing and electric wiring for rooms of the fifth floor of the New York State Capitol. Lewis F. Pilcher is State Arch.

Bath, N. Y.—Plans have been completed for the construction of a municipal electric light plant, at a total cost of \$50,000 for the building and equipment. W. W. Babcock is Chn. Bldg. Com.

✚Potsdam, N. Y.—(Official)—Bids will be received until noon, Sept. 5, by Thomas E. Finekan, Asst. Comr. for Elementary Education, Education Bldg., Albany, N. Y., for new boilers at the Potsdam Normal School. See advertisement under Contracts To Be Let.

Glenchester, N. J.—The City Council is considering an offer made by Counsellman Lewis R. Reilly to install a municipal electric light plant at the city water works.

Perth Amboy, N. J.—The Perth Amboy Gas Co. is doubling the capacity of its gas plant at the foot of High St. The improvements, which include an addition to the condenser building and a new retort house, are estimated to cost \$40,000.

Kittanning, Penn.—See item under "Water Supply and Irrigation."

Henderson, Ky.—(Official)—The Municipal Electric Light Station, L. P. Hite, Supt., will shortly ask for bids for the construction of a steel frame boiler room, 64x20 ft., to place the one lately destroyed by a cyclone. Noted Aug. 6.

Irvine, Ky.—Clyde Gaines, Irvine, has made application for a franchise to establish and operate an electric light plant in Irvine. Noted Jan. 22.

Whitesburg, Ky.—K. I. Surman, representing the James Clark, Jr., Electric Co., Louisville, Ky., is interested in the organization of a company to build and operate an electric light plant in Whitesburg.

✚Cleveland, Ohio—The Commissioner of Purchases and Supplies has awarded the contract for the construction of the Walworth Ave. substation for the municipal electric light system to the C. N. GILPIN CO., 1825 East 12th St., Cleveland. Cost about \$30,000. Noted Aug. 23.

Bids will be received until Sept. 21, by the Board of Education, for remodeling the electric wiring of the East High School. F. G. Hogan is Dir. of Schools.

Detroit, Mich.—The City Council has approved the plan for the construction of a new water works at the site of the old one which was built in 1888. The project is estimated to cost \$1,000,000. Noted July 25.

East Gary, Ind.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Detroit, Mich.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Placemanning, Mich.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

Chicago, Ill.—The City Council has awarded the contract for the construction of a new municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

raising it to an elevation of 1600 ft. and increasing the power to the NETTLETON BRIDGE-ESHUACH CO. at \$100,000.

Passadena, Calif.—The City Trustees have awarded the contract for a steam turbine electric generating unit for a municipal electric light plant to the ALLIS-CHALMERS CO., Milwaukee, Wis., at \$36,675. The contract for a condenser was awarded to the C. H. WHEELER CO. at \$4,500.

San Francisco, Calif.—The Pacific Gas & Electric Co. has awarded a contract for work at its substation at 23d and Georgia Sts. to cost \$20,000. Noted Aug. 6.

BRIDGES

Boston, Mass.—The War Department has approved the plan for rebuilding the Wellington Bridge, which was burned in 1917. It will be of concrete, and is estimated to cost \$11,000. John R. Rahlin, 14 Beacon St., is the Eng. of the Metropolitan Park Comrs. Noted June 11 and July 9.

Norwalk, Conn.—The Board of Selectmen has awarded the contract for the construction of a steel bridge over the Berlin River to the BERLIN CONSTRUCTION CO., Berlin, Conn., at \$10,000. Noted July 10, 1913.

Buffalo, N. Y.—It is reported that the Board of Public Works will soon ask for bids for the construction of a steel bridge about 100 ft. long, crossing the Buffalo River at Albert Road. George H. Norton is City Eng.

New Hartford, N. Y.—Official: The Town Council has awarded the contract for the construction of a reinforced-concrete bridge over Summit Creek to WILLIAM F. COGLEY, 200 Paul Bldg., Elmhurst, N. Y., at \$11,592. Charles O. Podley is Town Clerk. Noted Aug. 2.

Jersey City, N. J.—Official: Bids will be received until 2 p. m. Sept. 1 for the construction of a concrete arch over the old Railroad Cut on the Hudson Boulevard East. Weehawken Township. J. C. Sweeney is Chk. of the Comrs.

Elkwood City, Penn.—Plans are being prepared by Thomas A. Gilkey, Engr. of Lawrence County, for the construction of a reinforced-concrete bridge over the Connoquessing River connecting Elkwood City with Hazledell, which places have recently consolidated, taking the name of the former. The estimated cost of the bridge is \$100,000, and bids will probably be asked some time this fall.

Pittsburgh, Penn.—Bids will be received until 2 p. m. Sept. 1 for the construction of two reinforced concrete bridges over Pine Creek. J. G. Chaffant, Room 205 Court House, is Engr. of Allegheny County.

Jacksonville, Fla.—The Board of Commissioners of Duval County has retained A. F. Harley, Consult. Engr., to prepare preliminary plans and estimates for the construction of a bridge over the St. Johns River. John H. Patterson is Chn. of the Bd. of Comrs. Noted July 9 and Aug. 6.

Chattanooga, Tenn.—Final plans have been completed for the construction of the Market St. Bridge over the Tennessee River, connecting Chattanooga with Hill City. The total length will be 210 ft. of which 210 ft. will be concrete construction and the remainder earth fill. There will be a steel truss span of 300 ft. It will cost about \$500,000. Bids will probably be asked some time in September by the Tennessee River Bridge Committee. Theodore F. King, Jr., Chn. of the Bd. of Comrs. Noted Jan. 22, Mar. 5, and Apr. 14.

Easton, Ohio.—Bids will be received until 10 a. m. Sept. 11 for the construction of commissioners of Stark County for the construction of a bridge in Perry Township. The bridge will be 100 ft. long, 10 ft. wide, and 10,000 lb. of steel. J. C. Storer is Chk. of Comrs.

Easton, Ohio.—Bids will be received until 10 a. m. Sept. 11 for the construction of commissioners of Stark County for the construction of a bridge in Perry Township. The bridge will be 100 ft. long, 10 ft. wide, and 10,000 lb. of steel. J. C. Storer is Chk. of Comrs.

Cincinnati, Ohio.—Official: Bids will be received until 10 a. m. Sept. 11 for the construction of commissioners of Hamilton County for the construction of a concrete bridge over Eagle Creek on the left bank of the Cincinnati River. Albert Reinhardt is Chk. of Comrs.

Cleveland, Ohio.—The question of building a third high-level bridge over the Cuyahoga River will be submitted to the voters for their decision at the November election. The estimated cost of the bridge from plans already prepared by W. A. Seitz, Jr., Chn. of the Bd. of Comrs. is \$1,700,000. Noted July 10.

Duncan Falls, Ohio.—Bids will be received until Sept. 14 for the construction of commissioners of Muskingum County, Zanesville, for the construction of a reinforced concrete viaduct over the river at the Duncan Falls Bridge. Duncan Falls Bridge Co., 100 E. 1st St., Zanesville, is Chk. of the Comrs. Noted July 10.

Petersburg, Ind.—Official: Bids will be received until 10 a. m. Sept. 11 for the construction of commissioners of Pike County for the construction of a steel bridge in various townships. J. C. Storer is Chk. of Comrs.

Winchester, Ind.—Official: Bids will be received until 11 a. m. Sept. 11 for the construction of commissioners of Randolph and Wayne Counties for the construction of a concrete bridge over the Kentucky River at the Kentucky River Bridge. J. C. Storer is Chk. of Comrs. Noted July 10.

Escanaba, Mich.—Official: Bids will be received until 10 a. m. Sept. 11 for the construction of commissioners of Escanaba County for the construction of a bridge over the Escanaba River. R. P. Mason is Chk. of Comrs. Noted July 10.

Galena, Ill.—Official: Bids will be received until 10 a. m. Sept. 11 for the construction of commissioners of Galena for the construction of a bridge over the Ohio River at the Galena Bridge. J. C. Storer is Chk. of Comrs. Noted July 10.

Cairo by the Mobile & Ohio R.R. W. H. Wells, Washington, D. C., Ch. Engr. of Const. of the Southern Ry., has charge of the work. Noted July 30.

Libertyville, Ill.—(Official)—Bids will be received until 2 p.m., Sept. 5, by the H. L. Bertwill, for the construction of the Oak Spring Bridge, Libertyville Township, Lake County. It will be of reinforced concrete, and is estimated to cost \$4300. Charles E. Russell, Waukegan, is County Supt. of Highways.

Morris, Ill.—(Official)—All bids received Aug. 22 by the Commissioners of Grundy County for the construction of a bridge in Maine Township were rejected as too high, the lowest bid being \$8287. New bids were received on Sept. 2. F. Stine is County Supt. of Highways. Noted July 22 and Aug. 20.

Quincy, Ill.—(Official)—Bids will be received until 2 p.m., Sept. 5, by Floyd V. Bell, County Supt. of Highways of Adams County, for the construction of the McCraney Creek Bridge, to be located between Payson and Richfield Townships, Adams County, and Barry and Kinderhook Townships, Pike County. Bids will be accepted for either a steel bridge, estimated cost, \$5930, or for one of reinforced concrete, estimated cost, \$6750.

Milwaukee, Wis.—(Official)—(A correction)—We are advised that the item in the issue of Aug. 20 stating that the Chicago & Northwestern Ry. had awarded the contract for the construction of a railway bridge at Milwaukee to Bellet & Macmillan, was in error, as the CLEARLY WHITE CONSTRUCTION CO., Chicago, Ill., has the contract for this bridge, and has sublet the pile-driving to the firm mentioned.

Carroll, Iowa—(Official)—Bids will be received until 2 p.m., Sept. 4, by the Board of Supervisors of Carroll County for the construction of 11 concrete culverts at an estimated cost of \$3940, and for one steel bridge, estimated cost, \$4000. George A. Poeppel is County Auditor.

Keokuk, Iowa—(Official)—is authoritatively stated that no contracts have been awarded, nor bids asked as yet for the reconstruction of the Keokuk and Hamilton Bridge across the Mississippi River between Keokuk and Hamilton, Ill. Ralph Modjeski, Orchestra Hall, Chicago, Engr. in Charge, is now at work upon the plans. Noted May 28, June 18 and Aug. 6.

Marshalltown, Iowa—The Supervisors of Marshall and Jasper Counties will build an inter-county bridge on the south line of Marshall County. It will be of reinforced concrete, about 50 ft. long and 16 ft. wide. The estimated cost is \$4000.

Sioux City, Iowa—Press reports state that Sioux City has asked the State Highway Commission to prepare plans for the construction of a concrete bridge over the Big Sioux River, connecting Iowa and South Dakota. As plans for the bridge will be about 400 ft. long and 40 ft. wide, Sioux City will pay two-thirds of the cost, and Union County, South Dakota, the other third. Noted Dec. 4, 1913.

Concordia, Kan.—(Official)—Bids will be received until noon, Sept. 24, by the Commissioners of Cloud County for the construction of six reinforced-concrete bridges, three in Colfax Township, one each in Nelson and Aurora Townships, and one between Nelson and Aurora Townships.

Erle, Kan.—(Official)—The Commissioners of Neosho County have rejected all bids received Aug. 17 for the construction of four bridges, two 20-, one 60- and one 75-ft. span. W. E. Neal is Clk. of the Comrs. Noted Aug. 13.

Manhattan, Kan.—Press reports state that bids will be received until Sept. 15 by the Board of Commissioners of Geary County for the construction of five concrete bridges. George H. Hungerford is County Clk.

Richland, Kan.—(Official)—Bids will be received until 1 p.m., Oct. 5, by the Commissioners of Morton County for the construction of a wood pile bridge, known as the Point of View Bridge, crossing the Cimarron River near Elkhart. It will be 609 ft. long with a 16-ft. roadway.

Wichita, Kan.—(Official)—Bids will be received until noon, Sept. 21, by the Commissioners of Sedgwick and Sumner Counties for the construction of a reinforced-concrete bridge over Cowskin Creek on the county line of Edgar V. Moore. Wichita, is County Engr. of Sedgwick County. Noted Aug. 13.

Madison, S. D.—(Official)—Bids will be received until 10 a.m., Sept. 10, by the Commissioners of Lake County for the construction of two concrete bridges, one in Chester Township, and the other in Orland Township. M. D. McGillivray is County Auditor.

Deer Dodge, Mont.—The Commissioners of Powell County received the following bids on Aug. 17 for the construction of two steel bridges: (a) 152-ft. bridge over the Big Blackfoot River; (b) 70-ft. bridge over the Little Blackfoot River. W. A. Adams & Co., (a) \$3470, (b) \$2880; Minneapolis Steel & Railway Co., (a) \$3200, (b) \$2480; F. H. HARRINGTON, (a) \$3600 (awarded contract), (b) \$1900; O. E. PEPPARD, (a) \$6935, (b) \$1900 (awarded contract); Security Bridge Co., (a) \$3000, (b) \$2800; Midland Bridge Co., (a) \$7012, (b) \$2620. Noted Aug. 6.

Corpus Christi, Tex.—The Commissioners of Nueces County have awarded Nos. 1 and 2 for the construction of the causeway across Nueces Bay to W. L. PEARSON & CO., Houston, at \$88,290 and \$47,000 respectively. List of bidders for Contract No. 1 noted Aug. 27.

Denison, Tex.—(Official)—Bids will be received until noon, Sept. 7, by the Mayor and City Council for the construction of a 6-ft. roadway bridge over the shore of the Missouri Kansas & Texas Ry. Co., Denison. Alternate bids will be accepted for concrete slab- or wood plank flooring. T. McElvaney is Mayor. A. B. Clenny is City Engr.

Houston, Tex.—(Official)—Bids will be received until 2 p.m., Sept. 7, by the City Engineering Department for the construction of the Taylor St. Bridge. The estimated cost is \$12,000. E. E. Sands is City Engr.

Fort Collins, Colo.—(Official)—The Commissioners of Larimer County have awarded the following contracts for bridge construction: To J. C. WHITEHEAD, Fort Collins, at \$3165 for five concrete bridges; to B. R. HOWE, Loveland, Colo., at

\$1372 for three concrete bridges; to the W. H. ROLLER CONSTRUCTION CO., Fort Collins, at \$2565 for two steel bridges. James G. Edwards is County Engr. Noted July 30.

Aberdeen, Wash.—The Mayor and City Council are negotiating with the Oregon-Washington Ry. & Navigation Co. for widening the present walks of the railway bridge sufficiently to allow the passage of automobiles and other vehicles. The estimated cost of the work is \$50,000, while an entire new bridge would cost about \$150,000. Eugene France is Mayor.

Buckley, Wash.—The Commissioners of King County, Seattle, have rejected all bids for the construction of the piers for the Buckley Bridge as being above the estimate, and it is reported that the Commissioners of King and Pierce County plan to purchase the materials, and build the bridge by day labor. M. Roy Thompson is County Engr. of King County. Noted July 30 and Aug. 6.

Snoqualmie, Wash.—The lowest bid received by the Commissioners of King County, Seattle, for the construction of a bridge over Tokul Creek near Snoqualmie, was that of Charles G. Huber, Seattle, at \$18,997. Noted Aug. 6.

Philomath, Ore.—The bridge of the Corvallis & Eastern R.R. over Mary's River, four miles east of Philomath, was entirely destroyed by fire recently. It was about 460 ft. long, and will be rebuilt at once. F. M. Siefer, Portland, Ore., is Ch. Engr.

St. Helen, Ore.—(Official)—The State Highway Commission, Salem, has awarded the contract for the construction of one 150-ft. bridge, 125 ft. long, on the Nehalem Highway, Columbia County, to the AMBROSE-BIRDSONAL CO., Portland, Ore., at \$25,000. C. H. Purcell is State Bridge Engr. Noted Aug. 13.

Salem, Ore.—(Official)—No definite plans have been made yet by the Commissioners of Marion and Polk County for the construction of the proposed bridge between the two counties, but it is hoped to start the preliminary work during the winter. The present structure has been declared unsafe. Noted Aug. 6.

Vale, Ore.—Bids will be received until Sept. 7 by the Commissioners of Malheur County, for the construction of a 150-ft. steel bridge with two concrete abutments, over the Malheur River near Harper. John P. Houston is County Clk.

Chico, Calif.—(Official)—Bids will be received until 2 p.m., Sept. 10, by the Board of Supervisors of Butte County, Oroville, for the construction of a reinforced-concrete bridge, about 90 ft. long, over Chico Creek in Bidwell Park, near Chico. C. F. Belding is Clk. of the Bd.

San Jose, Calif.—(Official)—The Board of Supervisors of Santa Clara County, has awarded the contract for the construction of a bridge over the Pajaro River between Santa Clara and San Benito Counties to the SECURITY CONSTRUCTION CO., Los Angeles, at \$19,196. The bid of Mesmer & Rice was \$19,625. Noted Aug. 13.

(Official)—Bids will be received until 11 a.m., Sept. 8, by the Board of Supervisors of Santa Clara County, for the construction of a reinforced-concrete bridge over Adobe Creek at Edith Ave., San Jose. Henry A. Pfister is Clk. of Supervisors.

San Luis Obispo, Calif.—The Board of Supervisors of San Luis Obispo County has awarded a contract for the construction of a reinforced-concrete bridge to the MERCECREAU BRIDGE & CONTRACTING CO., Los Angeles, at \$59,000.

Walnut Grove, Calif.—The Board of Supervisors of Sacramento County has received bids for the construction of a bridge at Walnut Grove as follows: Jenkins & Wells, \$77,650; Matthews Construction Co., \$78,504; Ross Construction Co., \$85,946; Matthews Construction Co., \$88,000; H. H. Pargess & Co., \$83,500; William Concannon, \$89,900. E. F. Pfund, Sacramento, is Clk. of the Bd. Noted Aug. 6.

Woodbridge, Calif.—Plans are being prepared by F. E. Quail, County Supt. of San Joaquin County, for the construction of a steel bridge over the Mokelumne River at Woodbridge.

Santo Domingo, Dominican Republic—(Official)—Bids will be received until 10 a.m., Oct. 15, by the Director General of Public Works for the construction of a steel highway bridge across the Ozama River at Santo Domingo City. See advertisement under Contracts To Be Let. Noted June 11.

Franklin, Ind.—H. W. Foltz, Arch., is preparing plans for a State Masonic Home. The estimated cost is about \$150,000.

Gary, Ind.—The Illinois Improvement & Ballast Co., is having plans prepared for a four-story, 55x125-ft. store and office building. The estimated cost is \$80,000.

Indianapolis, Ind.—The contract for the construction of the building at Palmer and South Meridian St., for the Sacred Heart School, has been awarded to GEORGE CLEMENTS, Indianapolis. The estimated cost is \$60,000. Herman J. Gaul, Chicago, is the Arch.

Terre Haute, Ind.—Bids will be received by the State Normal School Trustee for erecting a three-story, reinforced concrete vocational and educational building. Estimated cost, \$160,000. George, Melusac & Flitten, Indianapolis, are the Archts. Noted Aug. 6.

Appland, Mich.—Local press reports state that bids will be received in October for the construction of the proposed high school. It will be a three-story and 128x190-ft. The estimated cost is \$110,000. Robinson & Campau, Grand Rapids, are the Archts.

The Levy Stern Furline Co., Hartford Conn. announces that it has appointed Filangue Bros & Sons 15 Whitehall St., New York its representatives in the Republic of Panama and the Canal Zone. The company also announces that its store in New York charge of J. J. Finlay will move Aug. 1 to 501 E. 45th St.

Week ending	Sold	Not sold	Postponed
Aug. 22	\$ 642,000	\$409,000	\$1,051,000
Aug. 29	2,841,700	642,000	180,000

Cement—Exports to South America—Rumors were current last week that insistent requests for cement had been coming from South America. One firm received a cable which read, "When can you ship 5000 bbl.?" However, there seems to be little disposition on the part of domestic concerns to give much attention to the South American patronage, since the credit arrangements have always proven very unsatisfactory, even in time of peace. H. S. Diney, of the Atlas Portland Cement Co., outlines the situation in the current issue of "Printers' Ink." He said in part: "The war has considerably opened up the South American market for our product, but in order to accept such business, it is likely that we will have to extend credits to a point not deemed prudent by us, and it is highly unlikely that a very great increase will be shown in cement produced in this country going to South Americans, unless they are ready to coincide with moderate terms instead of the extremely long credits to which the field is accustomed. This does not apply to the cement business exclusively. It applies, we believe, to many lines where the margin of net profits is small. Manufacturers will refuse to bid for, as well as sell to, South American trade under these conditions. Only where margins justify long terms will there be, in my opinion, any considerable expansion of our trade with South America. Owing to the difficulty which must for a short time at least surround the movement of gold, it must be apparent to the thoughtful that a considerable extension of credit by American sources must result to secure the trade which must naturally be diverted in a larger measure to us, it seems important that American producers and financial interests generally should appreciate the necessity of a very thorough study of this factor, while at the same time extending every credit facility justified by the desire to be of assistance to those countries which must now have our foodstuffs and merchandise."

Increasing Passenger Rates—Pennsylvania's decision to increase the rate on passenger mileage books on October 1 from two cents per mile to two and a quarter cents is believed by railroad men to be the first of many passenger rate increases that will be announced within the next few months. Railroad men pointed out to-day that such action would carry out one of the many suggestions made by the Interstate Commerce Commission in the five per cent. freight rate decision recently handed down.

While refusing the request of the Eastern roads for a

five per cent. increase in freight rates, the Interstate Commerce Commission expressed the belief that the lines in question needed more revenue and could increase their earnings in a number of ways, one by increasing passenger rates. In that connection the Commission said:

"The information available indicates that not only is the operating rate of the passenger-train service much greater than that of the freight-train service, but that the ratio of property investment to gross earnings is much greater in the passenger service. Hence the ratio of capital charges, and usually also the ratio of the taxes attributable to passenger service, is much greater than the ratio attributable to the freight service. Thus, on the Pennsylvania R.R., the estimated property investment per dollar of freight earnings was \$4.48 in 1910, \$4.16 in 1910, \$4.23 in 1911, and for each dollar of passenger-train earnings was \$3.00 in 1910, \$7.15 in 1910, and \$10.66 in 1911. In 1911 the property devoted to the passenger-train service earned much less than one-half as much as the property devoted to the freight-train service earned \$7.09."

A Scouting Trip—Wishing to enlarge the market for the products of their clients, W. L. Rickard, of Rickard & Sloan, Inc., 20 Vesey St., New York, N. Y., will make an extended trip through South America, leaving New York the latter part of September. He will visit the principal cities on both coasts and will make a thorough investigation of the markets and the best method of selling machinery and mechanical equipment and services. In connection with this trip, Mr. Rickard made the following statement: "For some time past, several of our clients have been considering the advisability of entering the export field, particularly in South America. They have felt that the Latin-American countries offered a large market for their products, and we have been conducting a preliminary investigation in this field to ascertain the best way to reach it. Naturally, with the countries which have had the lion's share of this business at war, and their industries practically at a standstill, the question has been brought to our attention more forcibly than ever. In order that we may determine just what a manufacturer has got to do to obtain the sale of this business, we decided that a personal investigation was the only thing, and for that purpose I will visit the largest cities and make a thorough investigation for those of our clients who can profitably enter this field. I expect to be away between four and five months."

TUNNEL, BOSTON, MASS.

*Bids were received by the Boston Transit Commission, Aug. 12, for the construction of Sect. D of the Dorchester Tunnel from (A) Michael Meehan, Boston; (B) William J. Sheils, Boston; (C) Rowe Contracting Co., Boston; (D) James J.

Coughlan Co., Boston; (E) Coleman Bros., Boston; (F) P. McGovern & Co., Boston; (G) HUGH NAWN CONTRACTING CO., Roxbury (awarded contract). The item bids were as follows:

HOW EUROPE PREPARED THE WAR CHEST

Charles Arthur Conant, the economist, in the Sunday New York Times, discusses how Europe prepared her war chest for the present conflict. He says, in part: "In Germany, the story was familiarly told that the Kaiser, near the end of the year 1913, inquired of the governor of the Imperial Bank if the German banks were equipped for war. Being told that they were not ready, he is said to have replied, 'When I ask that question again, I want a different answer.'"

By maintaining a discount rate of 6% at the Imperial Bank from January 1 to October 27, 1913, by active bidding at the London gold auctions for the gold which arrived weekly from South Africa, and by several changes in monetary legislation, the gold was steadily piled up which might enable the governor of the bank to answer ready, he is said to have replied, "When I ask that question again, I want a different answer."

From a gold fund of \$184,000,000 on December 31, 1912, the Imperial German Bank increased its reserve to \$336,000,000 on June 30, 1914. In addition, it gathered up for the Imperial government a sum of about \$30,000,000 to be added to the same amount stored in the vaults of the Juliusburg at Spandau. This sum of \$60,000,000 is rendered productive to the government in a sense by the distribution of an equal amount of government paper money in small denominations in the circulation. The government is under no pledge, however, to hold the gold against the notes in case of war, and if taxes and loans fail, or are slow in reaching the treasury, the gold can be employed to obtain necessary war supplies even from the hard-hearted foreigner who will accept no other form of payment.

France piled up her gold holdings in eighteen months from \$816,000,000 to \$2,000,000,000, and Russia increased hers from approximately \$800,000,000, materially increased the amount.

Austria-Hungary has not undertaken, under the monetary reform of 1912, to pay gold freely in the redemption of notes, and her gold fund of approximately \$250,000,000 has remained comparatively unchanged in amount. It was not surprising that, under pressure like this, the New York market should have been called upon to export about \$84,000,000 of gold before the war cloud burst, during the first six months of the present year, and that it should have lost another sum of about \$46,000,000 when Europe decided to throw over American securities at any price in order to convert her assets into money.

The entire gold production of the world during the eighteen months ended on June 30, 1914, was approximately \$705,000,000. Of this amount, about \$200,000,000 is retained by the arts and \$150,000,000 went to British India. This left about \$355,000,000 to be applied to monetary uses, and the whole of this amount was absorbed by the four great central banks of Germany, France, Russia, and Austria-Hungary.

What course Germany should pursue in respect to her monetary system in case of European war was the subject of considerable discussion in the special commission which was appointed in 1908 to consider the revision of the charter of the Imperial Bank. It was generally agreed that two steps were advisable—to permit the utmost accumulation of gold in the Imperial Bank, and to protect that gold against abnormal demands.

These two steps were, first, the issue of notes for small amounts, with the object of substituting notes for the gold in circulation; and, second, making the notes of the Imperial Bank legal tender throughout the empire. In 1906 the bank had already departed from its original policy of keeping the circulation saturated with gold coin by authorizing the issue of notes for 50 marks (\$11.96) and 20 marks (\$4.76). The effort was at first made to limit the issue of notes of these denominations to 300,000,000 marks (\$72,000,000) but early in 1912 this limit was passed, and within the next two years the issue of these two denominations of small notes rose to 681,822,000 marks, and their ratio to the total note circulation to about 26%.

The government of Russia had already reversed its original policy of 1897, of saturating the circulation with gold coin, and adopted the policy of issuing small notes. The notes of the smallest denomination, 1 ruble (51½c.) were indeed retired, but notes for 3 rubles, 5 rubles, and 10 rubles (\$5.15) were steadily pumped into the circulation until, as early as 1909, they constituted 46.5% of the total amount of paper outstanding. Within the next five years the gold in the State bank was increased by about \$170,000,000, which nearly covered the increase of the outstanding note issue by \$209,430,000.

Belgium had for several years issued notes of small denominations to take the place of her disappearing gold and silver coin; but France reserved the power to issue notes below 50 francs (\$9.65) until the need for them should be developed by the emergency of war. This foresight did not restrict great additions to her gold reserves, and gave her an opportunity to add materially to the resources of the Bank of France, when, on the outbreak of war, notes were promptly authorized for 20 francs (\$3.86) and even for 5 francs (96½c.).

With the general suspension of the gold standard, the central banks of Europe, except at the Bank of England, the banks are in a position to resist raids upon their gold and to lend their resources, as far as sound banking policy permits, to the struggle of their governments to maintain national independence. In England while the bank is still paying gold for notes, the policy of keeping gold in circulation has been abandoned, and the old limit of note issue, which was £5 (\$24.40), has been lowered to 10 shillings (\$2.44) and £1 (\$4.88).

It is not the purpose of any of the European powers, to carry on the war by issues of paper money. The suspension of gold payments at the banks serves the purpose of issue of notes for small denominations, which are legal tender in domestic transactions, is for the purpose of husbanding the gold stock against needless runs and keeping it as a guarantee fund of national solvency. It is the course which was adopted by France at the time of the Franco-German war in 1870, but so prudently were the affairs of the Bank of France conducted that the paper never fell more than 2½% below its value in gold.

A similar policy of reserve will probably be pursued by the banks of France, Germany and Russia in the present contest. The government of France has raised the maximum limit of the note circulation of the bank by nearly \$1,000,000,000, but the increase will not be used except as additional currency may be required, owing to the restriction in other forms of credit and the special demand for notes in the districts where the armies are gathered.

Contracts for Dual System of Rapid Transit

A Yankee Merchant Marine.—As steps in the development of the American Merchant Marine the passing into law with the signing by President Wilson of the ship registry bill and the war risks insurance bill was welcomed yesterday by Philip A. S. Franklin, vice-president and general manager here of the International Mercantile Marine, according to the Journal of Commerce, New York.

Mr. Franklin is a member of the special committee of the chamber of commerce appointed by President Seth Low on problems of shipments during the European war. This committee urged the prompt passage of the American registry bill for such relief as it might bring, and attended the conference held at the Treasury Department Aug. 14.

The ship registry bill in his opinion, goes a long way to help build up a merchant marine by facilitating the transfer of ships from a foreign register to the American flag. Here is now the opportunity for American capital invested in shipping to place upon the national register the ships owned by it and immediate relief should follow in increasing our tonnage to meet the lack of ships we suffered from at the outbreak of the war.

As to the operation of the ships the proclamation of the President, which he is authorized to make and which I understand he is likely to make at once, will place our ships in a better position to meet the competition of foreign-owned ships operated at less expense than our present laws permit us in carrying on the steamship business as a calling of its own.

One of our ships may be transferred immediately under the new law.

"With regard to the war risks insurance bill, this is an emergency bill and its going immediately into effect on the President signing it will help the situation for this reason. There is not enough insurance available in the local market to cover the valuable cargo of a modern big ship. The Government assistance in this direction will practically release much cargo that is offered and has been held back by the high rates that have been exacted."

"There is the question of building ships for the American register. I have stated and repeat it that for the American Line the International Mercantile Marine is willing to build steamships to be always available for the Government's service as express mail carriers and for use as auxiliary cruisers when circumstances demand if the Government will bear a share of the cost, in the same way as that in which the 'Mauretania' and 'Lusitania' were built with the pecuniary assistance of the British Government."

A Cotton Warehouse at Pensacola.—From a reliable source it has been learned that the Government has asked the Louisville & Nashville Ry. to make provision for the storage of 250,000 bales of cotton here this fall, and plans are under way to secure storage space in various other parts of the country. The purpose is to make provision for the results of the movement inaugurated by the Government to aid in marketing the cotton crop as a result of the situation created by the European war. In addition to the storage facilities in the Louisville & Nashville warehouse it has already been announced that the Atlantic Compress Co. is prepared to store at least 150,000 bales of cotton this season.

AUGUST BUILDING RETURNS

No effect of the war can be seen in the building returns for the month of August collected by this paper. In 19 cities in the eastern part of the United States there was a gain of approximately 15% in the estimated cost of the buildings from plans filed during August of this year compared with August of last year. For the first eight months of the year there was likewise a slight gain. In seven cities in the South there was a falling off of a small amount, both for the month of August and for the year. In the Middle West which, except for July, has showed a steady gain, month by month, there was a sharp falling off, amounting to \$1,900,000. This, however, cannot be traceable to the war and is wholly accounted for in the falling off at Cleveland, Ohio. This really was not a falling off, but there were some large operations which appeared in the August, 1913, figures. Practically all of these buildings for which plans were filed, such as the Public Service Building in Newark, have been planned and financed months ago and the majority of filing the plans only took place in August of this year. There were doubtless many corporations whose resources are ample to permit them to go ahead and build at any time they will take advantage of prevailing low prices.

RAILWAYS

*Pennsylvania—Central R.R. of New Jersey—A contract has been awarded by this company to the CHARLES McDERMOTT ESTATE, Pennsylvania Bldg., Philadelphia, Penn., about five miles west of Easton, Penn., to Wilson Township, Penn.

Virginia—See item under Tennessee.

Florida—Seaboard Air Line Ry.—This company contemplates the construction of a spur from Broward, Fla., to the property of the Carpenter-O'Brien Co. W. D. Faucette, Norfolk, Va., is Ch. Engr.

Mississippi—See item under Tennessee.

Tennessee—F. B. Shirley, Nashville, Tenn., is interested in the construction of a railroad to connect Nashville, Tenn., Norton, Va., and Holly Springs, Miss.

Indiana—Cincinnati, Indiana & Louisville Ry.—Surveys have been started by this company for the construction of a railroad from Aurora, Ind., to Lamb, Ind., about 50 miles.

Illinois—Elgin, Joliet & Eastern R.R.—This company has awarded a contract to OLIVER & COSTELLO BROS., for about 50,000 cu yd. of grading on its line through Georgetown, Ill.

Oklahoma—Beaver, Meade & Englewood R.R.—The contract for laying tracks on the main line of this company, from Beaver, Okla., to Forgan, Okla., has been awarded to JOHN L. LOVE, Okaloosa, Iowa.

Oklahoma—Rosston Grand Rapids & Protection R.R.—This company has been organized to construct a 12-mile railroad from a point on the Wichita Falls & Northwestern Ry. to Doby Springs, Okla. L. A. Walton is Pres. and Gen. Mgr. and J. H. Butler is Secy.

Idaho—Marble Creek Valley Ry.—This company has been incorporated to construct a railroad from Clarkia, Idaho, to Ponconio, Idaho, about 20 miles, and a line from the mouth of Lualaba Creek to the Little North Fork of Clearwater River, about 25 miles. The incorporators are F. Horrick, E. B. Flagg and A. V. Barrick, all of Wallace, Idaho.

California—Minkler Southern Ry.—This company has been incorporated to construct a railroad from Minkler, Calif., to Exeter and Lindsay, Calif. The incorporators are O. W. L. J. Hibbard, J. J. Burne, E. W. Champ and H. Hotterhoff, all of Santa Fe, N. M.

ELECTRIC RAILWAYS

Holyoke, Mass.—The Board of Aldermen has granted a franchise to the Holyoke Street Ry. Co. to double-track and extend its line in Aldenville. Louis D. Pellissier, Holyoke, is Vice-Pres., Gen. Mgr. and Pur. Agt.

Longport, N. J.—William F. Wahl, Atlantic City, is interested in the construction of an electric railway to connect Longport, Atlantic City, and Ventnor Heights with a point of the main line of the Pennsylvania R.R. on the meadows.

Riverside, N. J.—The citizens of Riverside, Riverview and Muhlenberg Park are contemplating the construction of an electric railway to connect Riverside and Tuckerton.

Lynchburg, Va.—Preliminary arrangements are being made by the Lynchburg Traction & Light Co. for the extension of its College line, along Fort Ave. J. W. Hancock, Lynchburg, is Gen. Mgr. and Pur. Agt.

Nashville, Tenn.—The City Commission has granted permission to the Nashville Ry. & Light Co. to double-track its line on West End Ave. from 21st St. to the city limits. F. W. Hoover, Nashville, is Vice-Pres. and Gen. Mgr.

Liberty, Ind.—The Commercial Club is interested in the construction of an electric railway from Richmond, Ind., to Hamilton, Ohio.

Kansas City, Mo.—The Kansas City Ry. & Light Co. contemplates the reconstruction of several of its lines in Kansas City. Frank Hagerman, Kansas City, is Vice-Pres.

Fort Worth, Tex.—The Northern Texas Traction Co. has been petitioned to extend its line through Niles City to Diamond J. D. The company will also build a one-mile extension to its Summit Ave. line in Fort Worth. George S. Clifford, Fort Worth, is Vice-Pres. and Mgr.

Phoenix, Ariz.—Plans are being considered by the Phoenix Ry. Co. for the extension of its Brill line. Samuel H. Mitchell, Phoenix, is Gen. Mgr. and Pur. Agt.

Falls City, Mo.—The Teal Creek Ry. Co. has been incorporated to construct and operate an electric railway from Falls City to a point in Polk County. The incorporators are Zera Snow, F. J. Cobbs and Wallace McAmant.

Pasadena, Calif.—The Pacific Electric Ry. Co. contemplates the construction of a second track on its line along North Los Angeles, Los Angeles, Los Angeles, Los Angeles.

*San Francisco, Cal.—The Board of Public Works has awarded a contract to EATON & SMITH, San Francisco, at \$977.9, for constructing the municipal electric railway through the Stockton St. tunnel.

The Board of Supervisors is considering a petition received from the North Beach Promotion Association, asking for the extension of the municipal electric railway to the Embarcadero.

Bridgeburg, Ont.—Surveys have been completed for the construction of the proposed hydro-radial railway from Bridgeburg to Deseronto, about 39 miles, and a branch line from Port Colborne to Welland, about eight miles.

Victoria, B. C.—The British Columbia Electric Ry. Co. is preparing plans for double-tracking its line on Esquimalt Road from Dundas to Catherine St. A. T. Goward, Victoria, is Local Mgr.

♦ **West Portland, Maine**—Official bids were received Sept. 1 by the Maine School for Deaf-Minded for constructing a water system as follows: JOHN E. PALMER, Boston Mass. \$1,275,000 (now let contract); James H. Ferguson

\$37,555; Marshall Bros., part, \$22,185; John W. Gulliv, \$20,797; Snader Construction Co., part, \$14,587; Forgnia & Romans Co., \$29,667; and Noyes-Campbell Co., \$28,800. Carl J. Hedin is Supt. Noted Aug. 27.

Clinton, Mass.—Bids are being received for the construction of a concrete dam 250 ft. long and 25 ft. high. Plans are on file with the Water Commissioners.

†**Manchester, Mass.**—The contract for constructing a reservoir on Foulsh Hill has been awarded by the Water Commissioners to JOHN CASHMAN SONS & CO., Boston, at \$19,750. Noted Sept. 3.

Newburyport, Mass.—The Artesian Water Co. contemplates enlarging and improving the water system.

†**Webster, Mass.**—Contractors have been awarded to LIGHT HEAT & POWER CORPORATION, Boston, at \$20,424 for constructing a concrete storage reservoir and at \$7642 for laying c.i. water pipe. Noted Aug. 6.

†**East Providence, R. I.**—The contract for building a filter house for the East Providence Water Co. has been awarded to J. W. BISHOP & CO., Custom House St., Noted June 11.

†**Amsterdam, N. Y.**—Bids will be received by the Commissioners of Public Works, until Sept. 15, for making about 50 wash borings at Glen Wild. James P. Wilson is City Clk.

Newark, N. J.—See item under "Sewers."

Whippany, N. J.—The Normandy Water Co. contemplates extending its mains in Whippany.

†**Washington, D. C.**—(Official.)—Bids will be received by the Commissioners of the District of Columbia until 2 p.m., Sept. 15, for furnishing 1000 tons of 8-in. c.i. water pipe. Specifications are on file with the Purchasing Officer, Rm. 320 District Bldg., Washington.

Norfolk, Va.—Press reports state that the Council contemplates spending \$390,000 for West Neck Creek water supply.

Huntington, W. Va.—An ordinance has been adopted by the City Commission providing for a bond issue of \$500,000, the proceeds to be used for the construction of a water plant. Noted Aug. 29.

†**Hazlewood, N. C.**—The citizens will spend \$15,000 for the improvement of the water works and sewer system. J. B. Hoyle is Town Clk.

Louisville, Ga.—Bonds for \$12,000 have been voted by the citizens of Louisville for the extension of the water and sewer systems. Noted Aug. 29.

†**Apopka, Fla.**—The Council has been petitioned by M. T. Anderson for a franchise for the construction of a water system and electric light plant.

†**Brandtown, Fla.**—The contract for constructing a 500,000-gal. reinforced-concrete reservoir has been awarded by the Department of Public Works to W. P. PERKINS, Tampa, at \$10,000. Noted Aug. 29.

†**Fort Meade, Fla.**—The city will extend the water and sewer system at an estimated cost of \$7500. Bonds for this purpose have been voted. M. A. Wilson is Mayor. Noted Aug. 6.

†**Homestead, Fla.**—The city contemplates spending \$50,000 for the construction of water and sewer systems and an electric light plant.

†**Macedenny, Fla.**—The city contemplates installing a water system and electric light plant.

†**Dickson, Tenn.**—At an election held Sept. 2 the citizens voted \$5000 in bonds, the proceeds to be used for laying water mains.

†**Hodgenville, Ky.**—Bonds for \$14,300 have been voted, the proceeds to be used for the construction of a water system. Noted Aug. 13.

†**Providence, Ky.**—The Providence Water & Utilities Co. has been organized with \$100,000 capital by W. E. Hunter and associates. The company will construct a water system. Noted Aug. 6.

†**McComb, Miss.**—Bids will be received by J. Dock Harrell, City Clk., until Sept. 29, for constructing a concrete reservoir. Xavier A. Kramer, Macomb, is Engr.

†**Buxeyres, Ohio.**—The contract for installing a filtration plant for the city has been awarded to GEORGE B. HICKS, South Charleston, at \$20,000.

†**Cincinnati, Ohio.**—The contract has been awarded by the Director of Public Service to AMERICAN STEEL & WIRE CO., Chicago, Ill., at \$13,600, for furnishing sulphate of iron for the Water Department for the remainder of the year 1914.

†**Cleveland, Ohio.**—Bids will be received by the Commissioner of Purchases and Supplies until Sept. 23, for furnishing three vertical triple expansion crank and fly wheel pumping engines for the division pumping station.

†**Coldwater, Ohio.**—Bonds for \$10,000, the proceeds to be used for the installation of a water system, have been voted by the citizens.

†**Fronton, Ohio.**—Plans for a water system have been approved by the State Board of Health. J. F. Witmer Co., Buffalo, N. Y., is Engr. Noted July 30.

†**Springs, Ohio.**—The City Water Works Co., Pittsburgh, Penn., has been instructed by the State Board of Health to install a purification plant.

†**Springfield, Ohio.**—The city will install a water system in the Ridgewood addition. Charles E. Ashburner is City Mgr.

†**Youngstown, Ohio.**—The contract for installing three engines and pumps at the new municipal pumping station has been awarded to KERR TURBINE CO., Wellsville, N. Y., at \$39,975.

†**Lansing, Mich.**—The erection of an auxiliary pumping station at the water system is under consideration by the Water & Light Commission.

†**Audubon, Iowa.**—The council contemplates spending \$6000 for extending the municipal water system. H. J. Mantz is Mayor.

†**Storm Lake, Iowa.**—The citizens contemplate installing a water system. A special election will be held to vote on the proposition.

†**Columbia Heights, Minn.**—Bids will be received by C. R. Holstrom, Recorder until 8 p.m., Sept. 19, for extending the water system.

†**Cuyuna, Minn.**—Bids will be received by G. F. Anderson, Village Clk., until 8 p.m., Sept. 14, for drilling three wells and making connections and for furnishing a 400-gal. electric pump.

†**Wilmar, Minn.**—The contract for constructing a tank and tower for the water department has been awarded to DES MOINES BRIDGE & IRON CO., at \$4475.

†**Kansas City, Kan.**—At an election held Aug. 25 bonds for \$200,000 were voted. The proceeds will be used to extend the water system. George Little is City Clk. Noted July 16.

†**Oswatimie, Kan.**—Worley & Black, Consult. Engrs., Kansas City, Mo., have submitted a report showing the needed improvements of the water system, recommending a new plant estimated to cost \$15,907, a distributing system, \$15,580 and pumps \$3900.

†**Bridgeport, Neb.**—Bids will be received by the Board of Village Trustees, until Sept. 28, for furnishing f.o.b. Bridgeport 8000 ft. 4-in. c.i. water pipe, 4500 lb. special fittings, 10 four-in. gate valves, 12 fire hydrants, etc. Noted Aug. 6.

†**Chadron, Neb.**—Bids will be received by G. E. Marriett, City Clk., until 6 p.m., Sept. 18, for constructing a water system.

†**Peever, S. D.**—Bonds for \$8000 for the construction of a municipal water system have been voted by the citizens.

†**Medicine Bow, Wyo.**—Bonds have been voted by the citizens, the proceeds to be used for the installation of a water system.

†**Melstone, Mont.**—At an election held recently bonds for \$19,000 were voted by the citizens, the proceeds will be used for the installation of a municipal water system. Noted July 16.

†**Brownsville, Tex.**—An election will be held Sept. 10 to vote on the proposition of issuing \$30,000 in bonds the proceeds to be used for the installation of a water system.

†**Cotulla, Tex.**—At an election held Aug. 14, the proceeds of which will be used for the installation of a water system, have been voted. Noted July 23 and Aug. 6.

†**Rohstown, Tex.**—The city will construct a water system to cost \$19,000. J. D. C. Rylander is City Secy.

†**Hailey, Idaho.**—An election will soon be held to vote on the proposition of issuing \$35,000 in bonds for the purchase and improvement of the local water system.

†**Midvale, Idaho.**—The Phelps Construction Co., Weiser, Idaho, has submitted a proposition to the City Council for the installation of a water system at Midvale.

†**Pacnetello, Idaho.**—At an election held Aug. 25, bonds for \$400,000 were voted. The proceeds will be used for the installation of a municipal water system. Noted Aug. 13.

†**Loveloock, Nev.**—A water distributing system will be installed by L. H. Taylor.

†**Seattle, Wash.**—The contract for laying water mains in East Harrison St. has been awarded by the City Council to A. M. FLOITTO, at \$41,285. Noted Sept. 3.

†**Seattle, Wash.**—The contract for completing the Cedar River dam to the elevation of 1000 ft. has been awarded by the Board of Public Works to HETCHELY, HETCHELY & ESCHBACH, American Bank Bldg., Seattle, at \$164,565.

†**Boston, Ore.**—The City Council has sold \$48,500 of bonds for the water system. Plans are now being prepared for the installation of the system.

†**La Grande, Ore.**—Plans are being prepared for the construction of a reservoir with a capacity of 2,250,000 gallons.

†**Pasadena, Calif.**—The contract for furnishing a steam turbine electrical generating unit has been awarded to AL-LIS-CHALMERS CO., Milwaukee, Wis., at \$26,675.

†**Redding, Calif.**—The Northern California Irrigation Association has been incorporated with a capital of \$10,000 by M. T. Howell, George W. Thompson and others. Surveys are being made for a large irrigation system.

†**San Francisco, Calif.**—Bids will soon be received by the Board of Public Works for aqueduct borings in connection with the Hetch-Hetchy municipal water system.

†**London, Ont.**—H. J. Glaubitz, Engr., water works plant, is in the market for two water wheels, turbine, pumps and motors.

SEWERS

†**Boston, Mass.**—The contract for constructing sewers in Mt. Hope St., Neponset Ave., Polson St. and Jewett St., West Roxbury, has been awarded by the Public Works Department to ANTONY CEPALO, at \$6345. Other bids were: Martino De Matteo, \$6378; William L. Dolan, \$6500; E. Drinkwater, \$6691; M. De Sisto, \$6812; John P. Lynch, \$6751; Louis Baldwin, \$7061; Charles J. Jacobs Co., \$7533; Anthony Baruffaldi, \$7701; John Guarino, \$7768; John H. Broderick, \$7990; James Driscoll & Son Co., \$8453; McCarthy & Walsh, \$8907; James L. Byrne, \$9808.

†**The contract for constructing sewers in Barbara, Edgemont and Houston Sts., and outlets in Montview, Rosechiff, Kirtledge and Whitford Sts., Clarendon and Hillside Aves., West Roxbury, has also been awarded to ANTONY CEPALO,**

STREETS AND ROADS

★**Nashua, N. H.**—(Official)—Bids will be received by the Board of Public Works, until 4 p.m., Sept. 14, for the paving of Bridge St. from the junction of Bridge St. and East Hollis St. to Van Buren St.

★**Boston, Mass.**—Bids will be received by the Department of Public Works, until Sept. 14, for constructing sidewalks and pavements in Brighton, Roxbury and Dorchester Districts. L. K. Rourke is Commr.

★**Pittsfield, Mass.**—The City Council has voted to pave West St. The approximate cost is \$25,000.

★**Springfield, Mass.**—The Board of Street Supervisors has decided to pave West St. with asphalt on a concrete base. The approximate cost will be \$60,000.

★**Hartford, Conn.**—Contracts for state road work, bids for which were received by the State Highway Commissioner, Aug. 18, have been awarded as follows:

Danbury Township—About 2844 lin.ft. amiesite pavement on White St., to CHARLES T. EASTBURN Co., Mt. Vernon, N. Y., for approximately \$12,457.

Manchester Township—About 6700 lin.ft. reinforced concrete (washed sand) on Main St., to the A. C. STERNBERG JR. CONSTRUCTION Co., West Hartford, for approximately \$14,920.

Old Saybrook Township—About 1755 lin.ft. gravel construction on Dublin Lane, to DONAHUE BROS., Middletown, for about \$290.

Griswold Township—About 5075 lin.ft. reinforced concrete (washed sand) and 17,800 lin.ft. native stone resurfacing on the Voluntown Road, to F. H. GILBERT, Jewett City, for \$18,411.

City of Bristol—About 4700 lin.ft. concrete pavement (washed sand) and 6992 lin.ft. gravel construction on the Terryville Road, to CHARLES H. TERRY, Bristol, for \$23,347. Noted Aug. 20.

Bids will be received by the State Highway Commissioner until 2 p.m., Sept. 15, for state road work, as follows:

Harwinton Township—About 4161 lin.ft. native stone macadam construction on the Torrington Road. Estimated quantities, 5470 sq.yd. 7-in. macadam, 1000 sq.yd. 4-in. macadam, 1000 sq.yd. telford, 14,060 lb. steel reinforcement for a 6-ft. span concrete bridge and 220 lin.ft. corrugated iron pipe. Plans on file at Selectmen's office, Town Hall, Harwinton.

Ridgefield Township—About 11,796 lin. ft. native stone macadam or gravel construction on the Norwalk Turnpike. Estimated quantities, 8890 sq.yd. 7-in. macadam, 320 lin.ft. corrugated iron pipe. Plans on file at office of George E. Smith, Div. Engr., New Milford.

Berlin Township—About 3580 lin.ft. trap rock macadam construction on the Cromwell Road. Estimated quantities, 5270 sq.yd. 7-in. macadam, 300 sq.yd. 4-in. macadam, 355 ft. corrugated iron pipe. Plans on file at Selectmen's office, Town Hall, Berlin.

Darien Township—About 5000 lin.ft. plain or reinforced-concrete pavement on Mansfield Ave. Estimated quantities, 5270 sq.yd. 7-in. macadam, 300 sq.yd. 4-in. macadam, 355 ft. corrugated iron pipe. Plans on file at Selectmen's office, Town Hall, Darien.

Washington Township—About 1500 lin.ft. native stone macadam construction with a 50-ft. span reinforced concrete bridge over the Shepang River at Woodville. This contract involves heavy work, the estimated quantities being, 4350 cu.yd. earth grading, 200 cu.yd. rock excavation, 250 cu.yd. wet excavation, 200 cu.yd. lb. steel reinforcement, 180 cu.yd. first class cement and 390 cu.yd. second class cement.

City of New Britain—About 4550 lin.ft. trap rock macadam or gravel construction on South Stanley St. Estimated quantities, 5490 sq.yd. 7-in. macadam, 2600 sq.yd. 4-in. macadam or 8090 sq.yd. gravel, 150 lin.ft. corrugated iron pipe. Also three sections, about 10,028 lin.ft., plain or reinforced concrete on Stanley St. Estimated quantities, 2842 cu.yd. concrete, 2842 cu.yd. earth there will be 970 cu.yd. of concrete on railroad area, and 730 cu.yd. concrete for which the city will pay. San Antonio, Tex.—(Official.)—A. Caswell Ellis of the School Board, San Antonio, announces that bids will be received for the School Board contract for construction of the manual arts high school at an estimated cost of \$60,000. J. M. J. Dittmann, 504 East Commerce St., San Antonio, is the Arch.

Waco, Tex.—W. T. Watt plans to erect a six-story hotel and office building, to cost about \$400,000.

Seattle, Wash.—The ROBERT SOUND BRIDGE & DRENGTH CO., general contractors for the King County Courthouse, has awarded the contract for construction of interior metal trim, to the SEATTLE COINING WORKS, at \$175,000. Noted Apr. 5, May 11, June 14.

Tacoma, Wash.—F. F. Chapman, Arch., Seattle, has been commissioned to prepare plans for a four-story building on the Pike Club. The estimated cost is \$100,000. Noted Apr. 10, and Sept. 1.

Langston, Okla.—The contract for the erection of the new high school has been awarded to A. C. APPLEWHITE, Eugene. The estimated cost is \$110,000. Noted June 1.

La Grande, Ore.—The plans for the Pike Club are nearing completion. The building will be three-stories and will cost \$100,000. Houghtaling & Dougan, Henry Bldg., Portland, are the Archs. Noted July 7.

Portland, Ore.—Jacobberger & Smith, Archs., Bd. Trade Bldg., are preparing plans for a Roman Catholic church and school to be erected at Couch and Davis St. The estimated cost is about \$100,000.

The First National and Security Savings & Trust banks are having plans prepared for a building to cost \$100,000. Stephen R. Butler & Condit, Boston, Mass., are the Archs. Noted July 20.

Greene, Cal.—Eugene Mathewson, Arch., Foreyth Bldg., is preparing plans for the Washington School, to be erected at a cost of \$35,000.

Los Angeles, Calif.—Nelson & Richards, Archs., have completed plans for a mercantile building to be erected at Grand Ave. and Seventh St. The estimated cost is \$100,000. J. W. Robinson is the owner.

St. R. McLaughlin, State Arch., is preparing plans for a state hospital for the insane. The estimated cost is \$150,000.

Roseville, Calif.—The Board of School Trustees has awarded the contract for the construction of the Roseville high school to H. A. KLYCE, San Francisco, Calif., at \$41,900.

Toronto, Ont.—The following contracts have been awarded for work on the Registry Office Building by C. S. Cobb, Archt.: Steel, TORONTO STEEL ROLLING CO., at \$42,600; carpentry, JAMES A. BERRIDGE, at \$19,884.

Toronto, Ont.—The Excelsior Life Association, Adelaide and Toronto Sts., has awarded the contract for the construction of its office building to the PETER LYALL CONSTRUCTION CO., Montreal. The estimated cost is \$500,000.

Edmonton, Alta.—J. H. Garth plans to build a seven-story brick and tile office building on Jasper Ave. The estimated cost is \$200,000. Van Sien & Macomber, Alexander Bldg., are the Architects.

Southern California Notes—Business conditions are beginning to pick up here, especially in the building line, and a general increase in the cost of materials is predicted.

The Exposition buildings at San Diego are rapidly nearing completion and make a very good showing. The exhibit will be in the nature of a "back-to-land movement," and the arrangements already made insure an interesting visit to the fair.

The reclamation of about 60 acres of water front along San Diego harbor, together with the municipal docks, is progressing rapidly, and plans are now being considered for extending the area of reclamation for a considerable distance to the north of the present contract.

The Los Angeles harbor improvements show considerable activity and will soon be in a position to handle the trade that will come from the Panama Canal.

Engineering Work in British Columbia

In British Columbia, as elsewhere in Canada, business was suffering a depression prior to the declaration of war in Europe. The situation precipitated matters at that work, other than that which is absolutely essential, is at a standstill.

Notwithstanding assurances from the British Government to the effect that practically all shipping on the high seas is now safe, confidence has not been restored, and will not be until more definite information is received.

Remote as this may seem from the business situation in British Columbia, it is nevertheless considered most important.

The present situation might be termed hesitation rather than depression, for there is much important construction in abeyance. Underlying the untoward conditions, there is a current of optimism which looks for and forecasts a speedy resumption of business and a return to the nearer normal state as soon as money becomes easier through confidence restored.

It should be remembered that for big works—railway development and the like—British Columbia depends to a large extent upon London capital, which is just now impossible to secure.

Municipal and building activities should not be greatly hindered, for the backbone of British Columbia industry—fishing, lumber, mining, etc., is, generally speaking, in a flourishing condition. Well established industries did not suffer greatly from the financial depression and should be a great aid to rapid adjustment.

The Government of the Dominion of Canada has stated that the public works will proceed according to schedule, but the Provincial Government here seems disposed to curtail expenses. The science building of the British Columbia University, a government institution, is the first large contract award to be postponed indefinitely by them on account of the war.

The city of Vancouver has similarly intimated that it will do no more than necessary work. The local press is, at the time of writing, the city's advertisement cancelling the call for tenders for the construction of sidewalks, and permitting contractors to withdraw bids already made.

On the other hand, the Board of Trade of the city of Vancouver, an influential body of British Columbia business men, intends to at once bring pressure to bear upon municipal and provincial governments to the end that public works will be carried on as extensively as possible. It is thought that this may result in action which will insure more of this work being done than in each of the last two winters.

At New Westminster, work is progressing on the harbor improvement scheme, and it is expected that the new wharf of the city on Front St. will be finished in about three weeks. The final contract, including the dredging and the construction plant, is estimated at \$19,282. Work done last month cost \$30,000, leaving the sum of \$150,716 to be still expended out of the half million dollar blylaw.

An award has been made for the proposed soap works to be established by the Royal Crown Soap Works, Ltd., of Vancouver, B. C. (closely identified with Lever Bros., Port Sunlight, England), on the south shore of Burrard Inlet, near the Burrard Narrows, for the construction of a new plant. The situation. Bids were closed nearly two weeks ago. The enterprise was to have been financed in London and the plans called for the expenditure of \$250,000.

It is affirmed that no work will be no cessation of construction on the new \$500,000 plant of the Dominion Shipbuilding and Drydock Co., Ltd., at North Vancouver, B. C.

The Burrard Inlet Tunnel & Bridge Co., Ltd., has had no meeting since the war broke out. Plans for its \$2,000,000 bridge have not yet been revived, and the project is being adjudicated upon by Ralph Modjeski, at Chicago, Ill. Contracts will probably be let later. In the "Engineering News" of July 16, 1914, it was stated in error that this contract had been let to the Foundation Co.

The British Columbia Steel Co., Ltd., has completed plans for the establishment of a \$200,000 steel plant at Bridgeport, B. C., and the stock is now on the market. The company, which is a joint venture of Americans and British, has its head office of the company is at Vancouver, B. C., and many prominent business men of the city, including Francis Leighton, general manager of the Vancouver Engineering Works, Ltd., are its principal directors.

Construction on the Pacific Great Eastern Ry. has not

slowed up in the least and satisfactory progress reports are being continually published.

At a special meeting of the South Vancouver, B. C., Council, a communication was read from the Voters' League protesting against Council's action in letting the contract for Victoria Road pavement to the Columbia Bituminous Co., claiming that the work could be done cheaper by day labor. The Reeve replied that the company's tender was a good deal lower than the estimates.

At Fort Moody, B. C., the street improvement work on John and Clark Sts. was ordered proceeded with at the last meeting of the Council. Work will cost \$15,000 and will be done at a local contract. A letter was also read from a Toledo, Ohio, firm of bond buyers confirming the recent order of 92 net for water loan debentures of \$80,000. It is therefore expected that the water system from Xoon's Creek will be started at an early date.

The latest information available from the lumber mills shows that they expect to have to reduce their output on account of the temporary stagnation of the market.

Building has practically ceased, but in Vancouver city alone, buildings are projected none of which will cost less than \$40,000, and aggregating in value over \$12,000,000. Building in outlying districts is similarly situated. It is therefore expected that as soon as confidence is restored, building will proceed on a big scale.

The Prince Rupert, B. C., hydroelectric plant has been held up, due to the purchase of penstocks in Germany and their consequent non-arrival on account of hostilities.

A Royal Commission recently began hearings on trade conditions in Canada in connection with trade commissions in other parts of the British Empire. Its activities will not be discontinued, but on account of the outbreak of the war will limit its hearings for the present to the Maritime Provinces, in accordance with instructions received from London.

The wearing off of the novelty of the war will result in a partial resumption of business activity.

Permanent Trade Exposition in South America—The proposition for permanent expositions of American manufacturers in South American capitals is growing in favor throughout the United States.

Word was received in New York this week that Baltimore merchants are arranging to open an exhibition of their own in some capital.

Pittsburgh according to reports, will spend a million dollars in showing the Southern republics what it can do in the way of providing iron and steel and other manufactures.

Exporters, associations and chambers of commerce are receiving letters from merchants and manufacturers all over the country, urging that everybody combine in the permanent expositions.

The following statement was authorized this week by the National City Bank:

"Permanent exhibitions of American manufactured articles maintained at South American centers would undoubtedly prove a decided advantage to the United States with South America. The Commercial Association of the city of Chicago has maintained an exhibit at Buenos Aires for the last three years with a representative in charge of the exhibit."

"It would seem that a coöperative effort on the part of New York and New England manufacturers along these lines would be very beneficial."

"An effective plan for establishing such an exhibition would be for the chambers of commerce of the cities interested in developing the South American markets to combine to provide competent representatives and publicity agents at joint expense, meeting the expense in proportion to the number of members of the respective associations interested in the South American field. The individual exhibitors should be charged not to exceed \$100 a year, and for this amount would receive a certain number of square feet for their exhibit."

"The general cost to the Association of Commerce of the City of Chicago for the exhibit maintained at Buenos Aires was in the neighborhood of \$50,000 for the three and a half years that the exhibit has been there, and the individual cost to the exhibitors has been \$100 a year for approximately 30 sq. ft. of space. In New York and the New England States there ought to be at least five hundred firms which would be willing to maintain an exhibit. The expense for each chamber of commerce would be coöperative effort be reduced to what would not amount to more than an ordinary advertising appropriation."

"The exhibit would serve as a center for American activities, where purchasers would be invited to inspect the goods, competent salesmen would represent the various lines, and in the case of machinery, skilled mechanics and demonstrators could be employed to point out the talking points in favor of American products."

"Where a number of competing firms should become members of the exhibit, an arrangement could be made for pooling the sales and dividing the profits."

"The purpose of the exhibit would be to introduce American goods, to create a demand for them and to demonstrate their superiority."

"Particular lines of goods could be featured on certain exhibition days, which days could be announced, with appropriate advertising and circulars, and every effort could be made to keep the lines of American goods filled and thoroughly up to date. An exhibit of this kind would be one of the most practical means of directing the attention of South Americans to American products."

John Barrett, director of the Pan-American Union, summed up the commercial possibilities of trade with South America recently. The 20 South American countries in 1913 conducted a foreign commerce valued at \$2,570,185,772. Their imports were valued at \$1,304,261,763, and the exports took up the remainder. This gave the combined countries a trade balance with the world of \$261,655,049.

"The American Manufacturers Export Association has sent out 'Warnings to Exporters.' It tells them to proceed very carefully in going into South American trade. They should acquire first an accurate and complete knowledge of conditions and requirements essential to the successful conduct of foreign trade."

Contracts to Be Let

Bids received until Oct. 22, 1914.

Market Street Bridge NOTICE TO BRIDGE CONTRACTORS

Chattanooga, Tennessee

August 31st, 1914

Sealed proposals directed to the undersigned, and endorsed on the outside of the envelope "MARKET STREET BRIDGE BIDS" will be received at the Office of the County Judge, County Court House, until 10:00 A.M., October 22nd, 1914, for the construction of a bridge at Market Street across the Tennessee River at Chattanooga, Tennessee. The bridge will be fifty (50) feet in width by approximately 2050 ft in length and will consist of:

(a) Nine (9) reinforced concrete girder spans, forty (40) ft each.

(b) Two (2) reinforced concrete arches, each (165) One hundred and sixty five ft span.

(c) Four (4) reinforced concrete arches, each (180) one hundred and eighty ft span.

(d) One (1) three hundred (300) ft steel span of the SCHERZER ROLLING LIFT DOUBLE LEAF BASCULE TYPE

Bids for the construction of the above bridge, will be asked for as follows:

(a) On the masonry and the concrete portion of the bridge complete.

(b) On the steel portion of the Scherzer Rolling Lift Double Leaf Bascule complete with machinery installed and ready for use.

(c) Same as (b), except the machinery omitted.

(d) On the masonry and reinforced concrete and steel portion of the bridge including the Scherzer Rolling Lift Double Leaf Bascule complete.

The Tennessee River Bridge Committee reserves the right to let the reinforced concrete portion and the steel portion separately or to let the entire work to the lowest responsible bidder on his bid for the construction of the bridge complete.

The bonds for the construction of the above mentioned bridge at Market Street, amounting to Five Hundred Thousand (\$500,000.00) Dollars have been issued and sold at a premium. The entire proceeds of the bond sale have been deposited in local banks, and is available for expenditure on the construction of the bridge.

Blank forms for proposals, contract and bond, plans and specifications can be seen at the Office of the County Engineer, County Court House, Chattanooga, Tennessee, and will be furnished on application on or after September 25th, 1914, at the Office of Mr. H. H. Davis, Consulting Engineer, Whitehall Bldg., New York City, N. Y. Said application, however, shall be accompanied by a deposit of Fifty (\$50.00) Dollars which will be required for each set of plans and specifications for the masonry or reinforced concrete portion of the bridge and Twenty Five (\$25.00) Dollars which will also be required for each set of plans and specifications of the steel portion of the bridge, i.e. Scherzer Rolling Lift Double Leaf Bascule. The above deposits for plans and specifications will be returned to all contractors submitting a bid upon the return of the above mentioned plans and specifications. The successful contractor will be required to execute an approved Surety Company Bond, for Sixty (60) % of the estimated value of the work as determined from the bids to assure the faithful performance of the contract, and the payment for all labor and material, which may be made in thirty (30) days. Monthly estimates will be made of the value of the materials of construction delivered at eight (8) % of the total amount, as verified by receipts showing the correct receipt of the materials, and ninety (90) % of such estimates will be paid to the contractor on the 10th of each month.

There is to be no examination at all piers and abutments and contractors are respectfully urged to examine the plans and samples of material to be excavated and to familiarize themselves with the site and local conditions before submitting their proposals.

The right is reserved to reject any and all bids.

TENNESSEE RIVER BRIDGE COMMITTEE

Thos. F. King, Chairman,

L. R. Bryan, Secretary,

J. B. Hagon,

W. Cummings,

H. F. Lawrence.

Bids received until Sept. 28, 1914.

Construction, Structural Steel, Heating, Plumbing, etc.

NOTICE TO CONTRACTORS. Sealed proposals for construction, structural steel, heating, plumbing and electric work for the Drill Hall, Cornell University, Ithaca, N. Y., will be received by the Hon. E. L. Williams, Cornell University, Ithaca, N. Y., until Monday, Sept. 28, 1914, 4 P.M., when they will be opened and read publicly. Bids will be received for each division of the work separately and no combination of bids will be considered. Proposals shall be accompanied by certified check in the sum of five per cent. of the amount of bids, and the contractors to whom the awards are made will be required to furnish surety company bonds in the sum of fifty per centum of the amount of contract, within thirty days after official notice of award of contract, and in accordance with the terms of the specifications Nos. 1965, 1966, 1967 and 1968. The right is reserved to reject any or all bids. Drawings and specifications may be consulted and blank forms of proposals obtained at the office of the Treasurer, Cornell University, at the Department of Architecture, Capitol, Albany, N. Y., at the New York Office of the Department of Architecture, Room 1224 Woolworth Building, New York City. Plans and specifications will be ready Tuesday, Sept. 8, 1914. In applying for plans and specifications each bidder must state which part of the work, (such as construction, structural steel, heating, plumbing and electric work) he intends to bid on. Drawings and specifications may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon deposit of certified check in the sum of \$15.00 for construction work or structural steel, and in the sum of \$10.00 for each set of heating, plumbing or electric plans, which check will be returned if plans and specifications are sent back in good order to the State Architect, Lewis F. Pilcher, Capitol, Albany, N. Y.

Bids received until October 15, 1914.

Proposals for Steel Highway Bridge

Department of Public Works, Dominican Republic, Santo Domingo, Sept. 4, 1914.

Sealed proposals will be received at the office of the Director General of Public Works, Santo Domingo, R. D., until 10 o'clock a. m., October 15, 1914, for furnishing all labor and materials for the erection of a steel highway bridge across the Ozama River at Santo Domingo City, Dominican Republic, in strict accordance with the plans and specifications which may be examined at the office of the Director General of Public Works in Santo Domingo City or may be had by making application in writing to the Strauss Bascule Bridge Co., Chicago, Ill., Consulting Engineers.

Bids received until Sept. 16, 1914.

Garbage Incinerator NOTICE TO CONTRACTORS

Charlotte, N. C., Aug. 31, 1914.

Sealed bids are asked for and will be received until 3:30 P. M., Monday, 14th, September, 1914, by the City Clerk of Charlotte, N. C., for the construction of a Garbage Incinerator, Building and 100 ft. by 11 in Radial Brick Stack, each or all.

Copies of the Plans and Specifications, proposal forms, contract form, bond, etc., may be seen in the Office of the City Clerk, at the City Hall, Charlotte, N. C., or may be obtained from him by prospective bidders upon depositing \$3.00, which sum will be refunded upon return of the Plans and Specifications in good condition. A certified check for at least 5% of the amount of the bid must accompany each bid.

A. W. WEARN,
City Clerk.

AUGUST BUILDING RETURNS

The contemplated building operations in eight cities on the Pacific Coast from plans filed in August amounted to \$5,467,005, compared with \$9,111,144 in August, 1913, or a fall-off of 40%. There was only a decrease of 14% in the first eight months of this year, compared with the figures of last year. The aggregate for eight months of 1914 was \$61,142,036, and for 1913, \$71,109,444.

RAILWAYS

New Jersey—Philadelphia & Reading Ry.—This company has completed surveys for eliminating the grade crossings at Willow, Calhoun, Marion and Prospect sts., in Trenton. N. J. William Hunter, Philadelphia, Penn., is Ch. Engr.

West Virginia—The construction of a railroad from Holling Junction to Webster Springs, W. Va., is contemplated by the Baltimore & Ohio R.R. and the West Virginia Midland Ry. This line will connect with a line being built by the West Virginia Pulp & Paper Co.

Florida—South Florida & Gulf Ry.—This company plans to resume work at once on its proposed extension from Kennansville, Fla., to Bassenger, Fla., 35 miles.

Tennessee—Jellico Coal & R.R. Co.—This company has been organized for the purpose of constructing a railroad from a point near Pine Knot, Tenn., to Jellico, Tenn., 18 miles. D. C. Barker, Jellico, Tenn., is Consult. Engr. Noted Aug. 20.

Ohio—Pennsylvania R.R.—This company contemplates the construction of a three-mile branch to South Massillon, Ohio, to connect with the Port Wayne line. Alexander C. Shand, Philadelphia, Penn., is Ch. Engr.

Indiana—Pennsylvania R.R.—Surveys are being made by this company to secure easier grades for its line to Madison, Ind. A. C. Shand, Philadelphia, Penn., is Ch. Engr.

North Dakota—Northern Pacific Ry.—This company, it is reported, has started work on its proposed line from Beach, N. D., to Baker, Mont. Noted Aug. 13.

Montana—Northern Pacific Ry.—See item under North Dakota.

Arkansas—Cache Valley R.R.—This company plans to construct an extension from Light, Ark., to Parakould, Ark., about 12 miles. A. D. Goldman, 112 South Main St., St. Louis, Mo., is Pres.

Texas—San Antonio, Uvalde & Gulf R.R.—This company will rebuild its tracks between Corpus Christi, Tex., and Odem, Tex., 17 miles, recently damaged by floods. E. R. Breaker, San Antonio, Tex., is Ch. Engr.

Texas—Delta Land & Lumber Co.—Preliminary arrangements are being made by this company for the construction of a 15-mile railroad from Comstock, Tex., to the timber lands. I. H. Petty, Kansas City, Mo., is interested. Noted Aug. 27.

Houston & Texas Central R.R.—This company has secured about 100 acres of land in Texas and will improve and enlarge its yard facilities. F. M. Thomson, Ennis, Tex., is Asst. Engr.

†**Texas**—Van Horn Valley Land & Ry. Co.—This company has awarded the contract for constructing a railroad from Van Horn, Tex., north to a point in New Mexico, to E. C. BEECHER and F. J. CFAMMING. The line will be 80 miles long.

Idaho—Western Pacific Ry.—Plans are being prepared by this company for an expenditure of \$10,000,000 for the construction of feeders. The company will make the construction of the Winnemucca Northern R.R. the first of its improvements. T. J. Wyche, San Francisco, Calif., is Ch. Engr.

Arizona—Magna Copper Co.—(Official)—This company contemplates the construction of about 30 miles of 36-in. gauge railroad from Superior to Webster, Ariz. W. C. Brownlee, Superior, Ariz., is Mgr. of the company. E. G. Dentzer is Asst. Ch. Engr.

†**Oregon**—Sutherlin, Coos Bay & Eastern R.R.—This company has awarded a contract to McALLISTER & SON CONSTRUCTION CO., Portland, for constructing the first 28 miles of its line to Coos Bay. Noted July 23.

California—Atchison, Topeka & Santa Fé Ry. Co.—Plans are being prepared by this company for the construction of a single railroad spur track over certain streets in Upland, Calif. G. W. Harris, Los Angeles, Calif., is Ch. Engr.

†**Quebec**—The Commissioners of the Transcontinental Ry. have awarded a contract to CAVICCHI & PAJANO for constructing a track at Cap Rouge, Que., and for completing the St. Malo line. Bids were received Aug. 4. Noted July 29.

ELECTRIC RAILWAYS

Skowhegan, Maine—According to press reports plans are being considered for the construction of an electric railway from Skowhegan to Shawmut.

Gardner, Mass.—The Northern Massachusetts Street Ry. Co. is preparing plans for the construction of an electric railway on Pleasant and Willow St. in Gardner. M. H. Merrill, Boston, is Pur. Agt.

Northen, Mass.—The Massachusetts Northeastern Street Ry. Co. has applied to the City Council for a franchise to relocate its tracks on Jackson St., Clinton L. Bartlett, Haverhill, is Pur. Agt.

Williamansett, Mass.—The Holyoke Street Ry. Co. plans to double-track and extend its line in Williamansett. Louis D. Pellissier, Holyoke, is Vice-Pres., Gen. Mgr. and Pur. Agt.

Danville, Va.—The Danville Traction & Power Co. will extend its line on Lee St. from its present terminus to the railroad station on Craighead St. N. W. Berkeley, Danville, is Gen. Supt. and Pur. Agt.

Hamlin, W. Va.—The Hamlin & Guyandotte R.R. Co. has been incorporated to construct and operate an electric railway from Hamlin to West Hamlin, about five miles. L. R. Sweetland and A. F. Morris, Hamlin, are among the incorporators.

Morgantown, W. Va.—The Monongahela Traction Co. has secured the right-of-way for the construction of an electric railway from Morgantown to Morgantown, W. Va. James O. Watson, Fairmount, is Gen. Mgr.

Clearwater, Fla.—A franchise has been granted to Charles H. Evans, and associates to construct and operate an electric railway in Clearwater.

Jacksonville, Fla.—Plans are being prepared by the Jacksonville Traction Co. for the construction of a second track on Hogan St. from Eagle to Cedar St. Hardy Croom, Jacksonville, is Loc. Mgr. and Pur. Agt.

Shreveport, La.—According to press reports, the Northern Louisiana Interurban Ry. Co. has awarded the contract for constructing its line from Shreveport to Monroe.

Nashville, Tenn.—According to press reports H. H. Mayberry and associates are interested in the construction of an electric interurban railway from Nashville to Springfield and thence into Kentucky.

Hopkinsville, Ky.—Preliminary arrangements are being made by R. E. Cooper, Hopkinsville, for the construction of an electric railway in Hopkinsville. Noted Sept. 2.

Ashtabula, Ohio—The East Village & Harbor Traction Co. has been incorporated to construct an electric railway from Ashtabula to Ashtabula Harbor. Mark Copeland and W. S. Mitchell, Ashtabula, are interested.

Murphysboro, Ill.—Preliminary arrangements are being made by the Murphysboro & Southern Illinois Ry. Co. for the construction of its proposed electric railway from Murphysboro to Carbondale, about eight miles.

Hutchinson, Kan.—The Hutchinson & Northern Ry. Co. contemplates the construction of an electric railway from Hutchinson to Burrton and probably to Halstead, where a connection with the lines to Wichita will be made. George Theis, Jr., is Pres.

Red Lodge, Mont.—The Carbon & Stillwater Electric Ry. Co. is making preliminary arrangements for the construction of an electric railway from Red Lodge to Columbus, Mont., about 40 miles. William Larkin, Red Lodge, is interested.

Castroville, Tex.—Preliminary arrangements are being made for the construction of an electric interurban railway from Castroville to San Antonio and Medina Lake.

Fort Worth, Tex.—Plans are being considered by the Northern Texas Traction Co. for the construction of a one-mile extension to its line on Summit Ave. G. H. Clifford, Fort Worth, is Pres. and Mgr.

Greenville, Tex.—The charter of the Greenville, White-wright & Northern Traction Co. has been amended and the name of the company changed to the Greenville Northwestern Ry. The route of the proposed electric railway has also been changed and will run from Greenville to Merit.

Salt Lake City, Utah—The City Council has granted a franchise to the Utah Light & Ry. Co. to extend its line from its terminus at Thirteenth St. East and Fifth St. South to connect with its line at Thirteenth St. East and Seventh St. South in Salt Lake City. Joseph S. Wells, Salt Lake City, is Gen. Mgr.

Los Angeles, Calif.—The Los Angeles Ry. Co. has secured the right-of-way for its line through Schuetzen Park and plans to start work soon on the construction. C. A. Henderson, Los Angeles, is Gen. Mgr. and Pur. Agt.

The Board of Harbor Commissioners has been granted permission to construct an electric railway from a point on the

BRIDGES

Charlotte, N. Y.—It is reported that all bids received Aug. 6 for the construction of a bridge over the Genesee River at Charlotte have been rejected, and that new bids will be received by the Monroe County Building Commission, Rochester, N. Y. The estimated cost is \$230,000. Frederick S. Couchman is Chm. of the Comm. List of bids noted Aug. 13.

Leestershire, N. Y.—The Town Board has awarded the contract for the construction of a bridge over Chocoutin Creek at West Main St. to the OWEGO CONCRETE CO., Owego, at \$14,875. There were three other bidders. J. J. Fenderson is Town Supt. Noted July 23.

Norwich, N. Y.—(Official)—Bids were rejected on Aug. 19 for the second time for the construction of a reinforced-concrete bridge over Chasawacta Creek. The Town Board has not yet decided whether or not to advertise again for bids. W. J. Harris is Town Engr. W. D. Tillman is Town Clk. Noted July 30 and Aug. 13.

Yonkers, N. Y.—(Official)—The Board of Contract and Supply has awarded the contract for the construction of a reinforced concrete bridge at Dewitt Ave. to the R. B. F. EAGNIN, Tuckahoe, N. Y., at \$89,900. Other bidders were: The O'Rourke Contracting Co., \$93,755; Casey, McLain & Newlands, \$95,900; Young & Hyde, Inc., \$10,620; M. J. Nolan, \$11,077. Noted Aug. 13.

Blairstown, N. J.—Bids will be received until Sept. 18 by the Board of Chosen Freeholders of Warren County, Belvidere, for the construction of a reinforced concrete bridge over Paulinus Kill, Blairstown. F. W. Salmon, Blairstown, is County Engr.

New Brunswick, N. Let t be the first time a process reaches a terminal at

Wharves and docks in 1. Fla. The Southern Wharves
in Miami. The wharves and docks at the foot
of Ave. D.

Drainage District—East Waco, Tex.—The County Commissioners of East Waco, have established a drainage district in East Waco.

Sioux Falls, S. D.—The Board of Education has appropriated \$47,000 for the erection of a school building on the East side.

St. Louis, Mo.—The following were the lowest bids for the construction of the Bryan-Mullanphy School at Kelm and Shaw Aves.: (General Contract) Murch Bros. Construction Co. \$172,900. (Building complete.) Wharton Building & Supply Co., St. Louis, \$232,400.

Rogers, Ark.—The Benton County Hardware Co. is having plans prepared for a four-story building to be erected at Second and Elm Sts. The estimated cost is \$50,000.

El Paso, Tex.—The El Paso School Board is having plans prepared for a high school to cost about \$500,000. Trost & Trost, Mills Bldg., El Paso, are the Archts.

Colorado Springs, Colo.—The Board of Trustees, International Typographical Union, John C. Daley, Supt., contemplates building an addition to the Home. Estimated cost about \$120,000.

Denver, Colo.—The contract for the erection of the Colorado National Bank has been awarded to SIEKKE BROS., Denver. The estimated cost is \$500,000. Noted Sept. 3.

Plans are being prepared by Gove & Walsh, Archts., Denver, for the construction of a building for the Young Women's Christian Association, to cost about \$150,000.

Seattle, Wash.—Sears, Roebuck & Co., First Ave., has had plans completed for a nine-story reinforced-concrete addition, estimated to cost about \$850,000. G. G. Nimmons, 1001-1003 3d Bldg., Chicago, Ill., is the Archt.

Bids will soon be received for erecting the Ballard High School. Estimated cost, \$300,000. Edward Blair is the Archt. Noted Feb. 12.

Tacoma, Wash.—Plans are being prepared by C. Frere, Archt., Henry Bldg., Seattle, Wash., for a four-story lodge for the Tacoma Elks' Hall Association, at an estimated cost of \$100,000.

La Grange, Ore.—The contract for the construction of a club house for the Elks' Club has been awarded to PALMER & JOHNSON, Portland. Estimated cost \$60,000. Noted July 3, Sept. 10.

Los Angeles, Calif.—J. W. Robinson Co. has awarded the contract for the construction of the seven-story block at Seventh and Grand Sts. to C. J. KUBACH. The estimated cost is \$1,000,000. Chicago & Richards are the Archts.

W. J. Pearson, Exchange Bldg., plans to erect a 13-story hotel at Tenth and Hope Sts. Estimated cost, \$800,000. Train & Williams, 226 Exchange Bldg., are the Archts.

Monterey, Calif.—The B. P. O. E. plans to erect a \$40,000 lodge in this city.

Santa Barbara, Calif.—Andrew Carnegie has given \$50,000 toward a fund for the erection of a public library in this city.

Montreal, Que.—Warren and Westmore, Archts., New York, N. Y., have the plans and will receive bids in a few weeks for a station to be erected for the Canadian Northern Ry. Co. Estimated cost \$250,000.

Guelph, Ont.—Bids will soon be received for erecting the building for the Physics Department at the Ontario Agricultural College. Estimated cost, \$50,000. Dr. Creelman is Principal.

Hamilton, Ont.—Stewart & Wilton, 2 Hughson St., will receive bids for the erection of the Homewood School, until Sept. 17th. Estimated cost, \$100,000.

Toronto, Ont.—The contract for the masonry on the Central High School has been awarded to R. ROBERTSON & CO., Toronto, at \$92,682. Noted June 11.

Vancouver, B. C.—It is reported that the Vancouver Civic Center Commission will receive plans, until Nov. 30, for the construction of a Civic Center building. The estimated cost is \$1,000,000.

FOREIGN TRADE OPPORTUNITIES

Where addresses are omitted they may be obtained from the Bureau of Foreign and Domestic Commerce, Department of Commerce, and its branch offices.

N. 13227. Railway Material—A company organized by merchants in one of the principal cities in Asia desires catalogs from American manufacturers of railway material, according to a letter received at the Bureau of Foreign and Domestic Commerce from one of the foreign legations at Washington. This company was organized with a view to purchasing American goods direct.

No. 13931. Motor Trucks—An American consul telegraphs from one of the European countries that an American located in his district desires prices immediately from reliable manufacturers in the United States for all available 1 to 3 ton motor trucks, delivered. Prices should be cabled to the address given in the report.

No. 13632. Scientific Instruments—The Bureau of Foreign and Domestic Commerce is in receipt of a letter from a foreign legation in Washington stating that a company organized by merchants in a city of one of the Asiatic countries desires catalogs and other information from American manufacturers of all kinds of scientific instruments. This company is organized to purchase several lines of goods direct from the United States.

War Rates for New York Funds

War Rates for New York Funds—Early in the year, the City of New York voted to foreign financial interests about \$100,000,000 in short-time securities. These were payable in gold in London and Paris to raise funds for paying the loan a syndicate of New York bankers bought new warrants bearing 6% interest.

A condition of the loan was that improvements authorized by the city during 1915, which are not self-sustaining, are to be financed from taxes and 75% of the revenue was to be paid for 50% by sale of serial stock; during 1917 they will be met by 75% from the budget and 25% by serial stock, and in 1918 the full cost of such improvements will be met from taxes.

The securities to be issued by the city will be dated Sept. 1, 1914, and \$57,000,000 in the form of corporate stock notes will mature Sept. 1, 1915; \$43,000,000 in revenue warrants will mature, \$1,000,000 Sept. 1, 1916, and \$25,000,000 Sept. 1, 1917. They will be delivered to the subscribing banks at once and payment will be made to the city by crediting to its account the amount of the banks' subscription. Of the \$57,000,000 one-year corporate stock notes, Comptroller Prendergast stated, \$35,000,000, which are for self-sustaining improvements, will be refunded by 50-year stock, and the remaining \$22,000,000 refunded by the new 15-year serial stock to be retired out of taxes at their maturity. The Comptroller said the only way the city could secure any gold at this time, to pay its maturing obligations, was to get all the banks to cooperate.

Mayor Mitchell said that he took measures to find out if gold could be secured by the city from the Federal Government, but found that it was impossible to get gold from that quarter. The Comptroller said this confirmed his earlier experience in the same matter. The Comptroller said he realized this plan will result in an increase in the tax rate and will restrict improvement work.

Henry P. Davison, of J. P. Morgan & Co., said: "I consider it a rare thing that anybody should be able to raise \$100,000,000 in times of stress like these. The success of the loan was due to the patriotism of the banks of the city."

A shipment of \$5,000,000 in gold was made Sept. 13 by J. P. Morgan & Co. to the newly established branch of the Bank of England at Ottawa, Ont.

INTERCEPTING DRAIN, FALL RIVER, MASS.

Bids were received Sept. 4 by the Reservoir Commission for constructing concrete intercepting drain and appurtenances from (A) Hanson Construction Co., Boston, Mass.; (B) William H. Arthur, Stamford, Conn.; (C) T. Stuart & Son Co., Newton, Mass.; (D) Bruno & Pettiti, Boston,

Mass.; (E) Macdonald, Hilton & Co., New York, N. Y.; (F) Fred T. Ley & Co., Inc., Springfield, Mass.; (G) Leo E. Kelly, Inc., Brooklyn, N. Y.; (H) The Whiting, Turner Contracting Co., Baltimore, Md.; (I) Chauncey H. Sears, Fall River, Mass. The item bids were as follows:

Contracts to Be Let

Bids received until Sept. 26, 1914.

Garbage Reduction Plant

Sealed proposals for furnishing machinery and equipment for a Garbage Reduction Plant to be located near the City of Detroit, Michigan, addressed to the Department of Public Works of the City of Detroit, will be received at the office of the Commissioner, City Hall, Detroit, until 10:00 o'clock A. M. on the twenty-first day of September, 1914.

Separate proposals, in duplicate, shall be submitted for each of the following items:

- A. Boilers and Stokers.
- B. Engines and Generators.
- C. Boiler Feed Pumps.
- D. Feed Water Heaters.
- E. Air Compressor.
- F. Engine Room Crane.
- G. Locomotive Crane.
- H. Coal and Ash Handling Equipment.
- I. Repair Shop Equipment.
- J. Green Garbage Cramers.
- K. Conveying Machinery.
- L. Cooking and Pressing Equipment.
- M. Grease Handling Equipment.
- N. Evaporating Equipment.
- O. Drying Equipment.
- P. Fermenting Equipment.
- Q. Railroad Track Scales.
- R. Railroad Garbage Cars.

Bidders submitting a proposal including two or more items shall submit a proposal for each item.

Each bid shall be accompanied by a certified check in the sum of not less than ten (10) per cent. of the amount of the bid, payable on its face to the Department of Public Works of the City of Detroit, as security for the acceptance of the contract.

The accepted bidder shall furnish two bonds each in a sum equal to the full amount of the contract.

Proposals shall be made in accordance with the specifications prepared by and on file in the office of Smith, Hinchman & Grylls, Consulting Engineers, 510 Washington Arcade, Detroit, Michigan. Copies of these specifications may be secured upon application to the Consulting Engineers.

The Commissioner reserves the right to reject any or all proposals.

GEO. H. FENKELL,
Commissioner

Bids received until Oct. 2, 1914.

Vault Equipment

NOTICE TO CONTRACTORS

Trenton, N. J.

Sealed proposals will be received at the office of the Comptroller in the State House, Trenton, New Jersey, at twelve o'clock noon, October 6th, 1914, for furnishing for sale to the office of the Secretary of State, in accordance with plans and specifications on file in the office of the Commissioner of Charities and Corrections, State House, Trenton, New Jersey.

Each bidder must accompany his proposal with a certified check for ten per centum of the amount of his proposal, payable to his order, properly endorsed, which will be returned to the unsuccessful bidder immediately following the award of the contract. The Commission reserves the right to reject any or all bids.

The successful bidder will be required to enter into a contract for the performance of the work with a bond of an approved security company for not less than one-half the amount of the contract.

Proposals must be in sealed envelopes sealed and marked **TEENDRALS FOR FURNISHING FOR VAULTS IN THE OFFICE OF THE SECRETARY OF STATE, TRENTON, NEW JERSEY**, and addressed to the Comptroller, Hon. Edward I. Edwards, Secretary of the State House Commission

Bids received until Sept. 28, 1914.

Construction, Structural Steel, Heating, Plumbing, etc.

NOTICE TO CONTRACTORS Sealed proposals for construction, structural steel, heating, plumbing and electric work for the Drill Hall, Cornell University, Ithaca, N. Y., will be received by the Hon. E. L. Williams, Cornell University, Ithaca, N. Y., until Monday, Sept. 28, 1914, 4 P. M., when they will be opened and read publicly. Bids will be received for each division of the work separately and no combination of bids will be considered. Proposals shall be accompanied by certified check in the sum of five per cent. of the amount of bids, and the contractors to whom the awards are made will be required to furnish surety company bonds in the sum of fifty per centum of the amount of contract, within thirty days after official notice of award of contract, and in accordance with the terms of the specifications Nos. 1265, 1266, 1267 and 1268. The right is reserved to reject any or all bids. Drawings and specifications may be consulted and blank forms of proposals obtained at the office of the Treasurer, Cornell University, at the Department of Architecture, Capitol, Albany, N. Y., at the New York Office of the Department of Architecture, Room 1224 Woolworth Building, New York City. Plans and specifications will be ready Tuesday, Sept. 8, 1914. In applying for plans and specifications each bidder must state which part of the work, (such as construction, structural steel, heating, plumbing and electric work) he intends to bid on. Drawings and specifications may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon deposit of certified check in the sum of \$15.00 for construction work or structural steel, and in the sum of \$10.00 for each set of heating, plumbing or electric plans, which check will be returned if plans and specifications are sent back in good order to the State Architect, Lewis F. Pilcher, Capitol, Albany, N. Y.

Contractors

BIDS OPENED OCTOBER 6, 1914

for the construction of Section No. 1 of Route No. 42 and Section No. 1 of Route No. 26, being the diagonal connection under 42nd Street between the existing subway and the Lexington Avenue subway.

Call or write concerning contract, plans and specifications. PUBLIC SERVICE COMMISSION FOR THE FIRST DISTRICT, 121 Nassau Street, New York City.

Bids received until Sept. 19, 1914.

Boilers

NOTICE TO CONTRACTORS Sealed proposals for new boilers at Potadum Normal School, Potadum, N. Y., will be received by Dr. Thos. E. Finegan, Asst. Commissioner for Elementary Education, Education Building, Albany, N. Y., until 12 o'clock noon on Saturday, September 19, 1914, when they will be publicly opened and read. Proposals shall be enclosed in an envelope (furnished by the State Architect) and shall be accompanied by a certified check in the sum of five per cent. of the amount of bid, and the contractor to whom the award is made will be required to furnish surety company bond in the sum of fifty per cent. of the amount of contract within thirty days after official notice of award of contract and in accordance with the terms of specification No. 2032. The right is reserved to reject any or all bids. Drawings and specifications may be consulted at the New York office of the Department of Architecture, Room 1224, Woolworth Building, at the office of the Department of Architecture, Capitol, Albany, N. Y., and at the Potadum Normal School, Potadum, N. Y. Drawings and specifications may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon reasonable notice to and in the discretion of the State Architect, Lewis F. Pilcher, Capitol, Albany, N. Y.

A New Railway in Panama

Panama Canal Zone (By Cable)—R. W. Hebard & Co., Panama, has the concession for the Chiriqui R.R. All purchases will be made by J. M. Motley, 16 Exchange Place, New York.

The Chiriqui project consists of a line from Pedregal, on the Pacific, to David. From this point there will be two branches, one 20 miles to La Concepcion, and another, 33 miles, to La Boquet. The La Boquet branch presents some unusual features, as an elevation of 4000 ft. will have to be attained in a distance of 33 miles. The funds for the construction will be furnished by the Republic of Panama. This information was obtained by a special representative of "Engineering News," who is now in South America.

From the "Canal Record," issue of Sept. 2, we extract the following:

"Grading on the new railroad in the province of Chiriqui has been completed for a distance of about seven miles, four miles between the port of Pedregal and the town of David, and three miles on the La Concepcion branch of the road. This branch line, extending from David to the village of La Concepcion, a distance of about 18 miles, will be the first to be completed."

"About 25,000 Oregon pine crensted ties have been delivered to date; these cost, laid down, about \$1 each. The contractors, R. W. Hebard & Co., are preparing specifications and conditions under which native ties, delivered at any point on the line, will be purchased. It is anticipated that 25,000 native hardwood ties can be obtained locally. The contractors are purchasing from the Panama Canal all the old 70-lb. rail in good condition that can be spared, in addition to a miscellaneous lot of other cast-iron, including two small Porter locomotives, used in the construction of the canal locks."

American Machinery for Spain—The Spanish government has entered the American market for the immediate purchase of \$2,000,000 of contractors' machinery and machine tools.

This report, emanating from the Foreign Trade Bureau of the Philadelphia Commercial Museum, has been verified by a representative of "Engineering News."

George C. Gibson, Asst. Chief of the Foreign Trade Bureau, during the correspondence relative to this statement at the disposal of our representative.

Of chief interest was a letter, dated Madrid, Aug. 20, from the Sociedad General de Representaciones, agents for machinery and accessories of all classes, industrial installations, and materials for railroads and tramways. In part it was as follows: "We have contracts to furnish the Spanish government with several million dollars' worth of machinery and supplies but the war has prevented our fulfilling these contracts since most of the orders were placed with German and French firms."

You know, the Spanish government has given orders to start important public work, and millions will be spent for this purpose. This firm is furnishing all the factories of the War and Navy Departments with machines and tools and manufacturers of the following lines are requested to enter into communication with us for the supply of machinery, to wit: sensitive and upright drilling machines, cold metal sawing machines, gear-cutting machines, punching and shearing machines, grinding and polishing machines and machines for the manufacture of automatic revising and retooling of cartridge for Mauser guns."

In an interview with George C. Newcomb, Spanish consul at Philadelphia, Monday morning, in regard to the status of this company, "this" firm is one of the interest and most responsible in Spain, however, beyond that I know of no specific contracts which they may be handling for the government."

Senior C. G. Salas, Spanish Consul General, New York, when questioned Monday afternoon regarding definite plans and appropriations on the part of the government, said: "Last year in the official budget there was made an appropriation of some \$10,000,000 for improvements at the extent over a period of ten years, but due to the problem of unemployed labor, I understand that steps have been taken to push the work along as rapidly as possible, so as to give employment to the idle men."

The work which the government has undertaken includes new roads, electric power installation, railway and illumination, irrigation, the dredging of Cadiz harbor together with the building of quays and breakwaters at the extent over railways in Morocco and the improvement of the port of Melilla."

RAILWAYS

✚**Virginia**—Norfolk & Western Ry.—A contract has been awarded by this company to WATSON & CO. for clearing a tunnel on the Pocahontas division, which recently caved in. The company also contemplates the construction of an extension from Sunnyside to Cedar Bluff, about 22 miles. J. E. Crawford, Roanoke, Va., is Ch. Engr.

Georgia—Rocky Ford & Southwestern Ry.—Plans are being considered by this company for the construction of a railroad from Rocky Ford to Portal, Ga., about 12 miles. Henry B. Griffin, Rocky Ford, Ga., is interested.

North Carolina—Rocky Ford & Southwestern Ry.—This company is being organized for the purpose of constructing a railroad from Atlanta north through Fulton, Cobb, Cherokee and Bartow Counties,

about 50 miles. William J. Morrison and A. C. King are interested.

The construction of a railroad from Homer, Ga., to Lula, Ga., is contemplated by Zeigler & Jones Co.

Tennessee—See item under Miscellaneous—Interlocking plant, Chattanooga, Tenn.

Tennessee—Alabama Great Southern R.R.—Plans are being made by this company to spend about \$80,000 for the improvement of the Belt Ry. in Chattanooga, Tenn., in connection with the double-track work on the line from Chattanooga to Wauhatchie. C. Dougherty, Cincinnati, Ohio, is Ch. Engr.

Kentucky—Chicago, Burlington & Quincy R.R.—Plans are being made by this company to resume work on the construction of its line from Paducah, Ky., to Metropolis, Ill. C. H. Cartledge, Chicago, Ill., is Ch. Engr.

Illinois—Chicago, Burlington & Quincy R.R.—See item under Kentucky.

✚**Wisconsin**—Chicago & Northwestern Ry.—A contract has been awarded by this company for the construction of a logging road from Kingston, Wis. to Cleary, Wis., about five miles, to WHITE & DUFFY, Chicago, Ill.

Montana—Great Falls Western R.R.—This company has been incorporated to construct a railroad through Cascade, Lewis and Clark and Powell Counties, about 110 miles long. The incorporators include A. C. Goodnow, Evanston, Ill. J. D. MacVicar, Great Falls and James O'Grady, Great Falls.

Arkansas—According to press reports the construction of a 70-mile railroad to connect Hoxie, Smithville, Poughkeepsie, Evening Shade, Melbourne and Calico Rock, Ark., is contemplated by the Arkansas Mining & Development Co. J. A. Gay, Poughkeepsie, Ark., is interested.

Texas—Quanah, Acme & Pacific Ry.—Surveys are being made by this company for the construction of a railroad from Roaring Springs, Tex. to Roswell, N. M., about 86 miles. Robert Gray, Quanah, Tex., is Gen. Mgr.

Oklahoma—Oklahoma Central R.R.—This company has been purchased by the Atchison, Topeka & Santa Fé R.R. Announcement has been made that the new owners contemplate improving the line in order to establish efficient service to handle the coal tonnage from Lehigh, Okla.

Arizona—Mascot & Western Ry.—Contracts will soon be awarded by this company for the construction of a 17-mile railroad from the mines of the Mascot Copper Co., near Dos Cabezas, Ariz. to Wilcox, Ariz. C. B. Weston is Gen. Mgr.

Oregon—Booth Kelly Lumber Co.—The construction of a railroad in Lane County, Oregon, to its timber holdings is contemplated by this company. The main office of the company is in Portland, Ore.

✚**California**—San Diego & Arizona Ry. Co.—ROBERT SHERER & CO., Pacific Electric Bldg., Los Angeles, have been awarded the contract for grading and constructing reinforced-concrete culverts on a portion of its right-of-way in California.

California—Western Pacific Ry. Co.—Plans are being prepared by John F. Stevens, Ch. Engr. of the Gould system, for the construction of feeder lines to Fair Oaks, Orangevale and Folsom, to connect with the main line near Sacramento.

California Terminal Ry. Co.—This company has filed articles of incorporation to construct a railroad from San Francisco to Sacramento, about 95 miles with branch lines to Petaluma and Napa, making a total trackage of 115 miles. The capital is placed at \$200,000. The directors are C. W. Conlisk, San Francisco and C. H. Lind and W. M. Rank, Alameda, Calif.

Alaska—The government engineers are making surveys for the proposed railroad in Alaska. Lieut. Fred K. Mears of the Alaska R.R. will be ready to submit a report on the route about Nov. 1.

ELECTRIC RAILWAYS

New Haven, Conn.—Plans are being prepared by the Connecticut Co. for the reconstruction of several of its lines in New Haven. E. P. Harlan, New Haven, is Mgr. of the New Haven Division.

Southampton, Conn.—Preliminary arrangements are being made by the Waterbury & Milldale Tramway Co. for the construction of three miles of new track in Southampton.

Du Bois, Penn.—According to press reports, the Jefferson Coal Co. contemplates the construction of an electric railway from Coal Glen to Falls Creek, to connect with the line of the Du Bois Traction Co.

Fairmont, W. Va.—The Monongahela Valley Traction Co. has secured the right-of-way for the extension of its line from Fairmont to Riverside. James O. Watson, Fairmont, is Gen. Mgr.

Owensport, W. Va.—The West Virginia Electric Ry. Co. is being organized to construct an electric railway from Owensport to Weston, about 50 miles.

Parkersburg, W. Va.—The Charleston, Parkersburg & Northern Ry. Co. will award contracts this fall for the construction of part of a 75-mile electric railway to connect Parkersburg, Sissonville, Guthrie, Ripley and Charleston. K. B. Stephenson, Parkersburg, is Secy.

The H. C. Packard Co., builder of dredging machinery, have moved from New York office at 110 Pearl St., to its new office at the foot of East 24th St., Bayonne, N. J.

Harry H. Webmaster, 1004 West Lehigh Ave., Philadelphia, Penn., is the new local builder, in extending on the construction

tion of the United States post office at Jellico and Shelbyville, Tenn., bids to be received Oct. 11 and 13, respectively and would like to receive catalogs and prices for structural materials.

Construction & Supply Co. (C) American Paving & Construction Co. (D) Charles L. Eastburn Co. (E) E. L. Bader Co. The item bids were as follows:

ENLARGING POND, ATLANTIC CITY, N. J.

Plans were received by the city Sept. 10, for enlarging Lower Pond, by D. J. Carson, C. A. Sutton & Carson, (B) Atlantic

The Max Amm Machine Co., Mt. Vernon, N. Y., is erecting an additional plant at Bridgeport, Conn., to take care of its increasing business, especially the export trade through its representatives in South Africa, Australia, India, China, Japan, South America, England and the continent. The area is approximately fifty acres, on which a modern plant, equipped with every facility is being erected.

The main shop and adjacent saw tooth sections, will contain every modern tool and device that the progress of the industry requires. The main erecting shop will be provided with 25-ton electric cranes, and railroad sidings will run into the plant to facilitate the handling of large units.

In addition to these buildings, there will be a special administration building three stories high, for the general and private offices and drafting room. This building will be connected by means of bridges with the works. The power and heating plants will be in separate buildings.

The welfare of the employees of the company will be looked after by the erection of a special recreation building and the laying out of baseball grounds and tennis courts.

The output of the concern is largely machinery for the making of tin containers, applied more particularly to the food industry. It likewise builds an extensive line of power presses for the sheet metal working industry. The company expects to occupy its new home about February 1915.

WAYNE ST. VIADUCT, BUTLER, PENN.

Bids were received Aug. 25, by H. O. Carson, City Engr., for constructing the Wayne St. viaduct, from (A) Dravo Contracting Co., Pittsburgh; (B) Pittsburgh Construction Co., Pittsburgh; (C) Penn Bridge Co., Beaver Falls. The item bids were as follows:

American Needs—Wilbur F. Wakeman, general secretary of the American Protective Tariff League, has sent out a letter to American producers requesting them to report any article or articles (raw material or finished product) of use in agriculture, mining or manufacture in the United States, for the supply of which we are dependent upon any foreign country. From the replies received the following tabulation has been made:

Agates	Molston
Alkali	Oil, recovered
Aluminum	Oil, olive
Amer	Oil, sizing
Aniline dyes	Oil, finishing
Antimony	Ozocerite
Asphaltum	Potash, crude
Barytes	Potash, carbonate of
Bearings	Potash, caustic of
Bleaching powder	Potash, hydrated carbonate of
Bronze powder	Potash, nitrate of
Carbolic acid	Potash, permanganate of
Card clothing	Pumice, lumps
Chamois skins	Pumice, powdered
China clay	Potato starch
Clay, washed	Rubber blankets
Clay, marbles	Salt
Cotton, Egyptian	Salt peter
Cyanides	Scheelite, concentrates
Duplex paper	Silica lining
Egg albumen	Skins, sheep and calf
Emery paper	Shellac
Epsom salts	Silk, artificial
Ferro-manganese	Soapstone pencils and bricks
Flint pebbles	Solder
Gallic acid	Sugar
Hemp	Talc
Iron	Tin, bars, blocks, pigs
Kieserite	Tin, grain or granulated
Leather skins	Tin foil
Linen	Transfer paper
Lith, Vienna	Tungsten
Lithographic tusch	Vanadium
Magnesia	Walrus hide
Magnesite	Wax crystals
Manganese	Windshields
Mica	Wool
Moleskins	Zinc dust

Prices of Engineering Materials

THE BUSINESS OUTLOOK

Overshadowing all other considerations was the flotation of the \$100,000,000 New York City loan. The price paid by the city was very high. If the City of New York has to pay \$60 for short-term accommodations, what can railroads and smaller municipalities expect? It may be taken for granted that the high price demanded by the bankers will be to insure the success of the loan. This will have the effect of scaring off borrowers for all kinds of public improvements. The field of new construction will be linked more closely with the financial situation than ever before, and until funds can be obtained on more reasonable terms there will be a minimum of new ventures.

Railroads are doing next to nothing. Some important bridge projects on which work had already been started have been postponed. One railroad company, which has done a great deal of construction work in and around New York, has cut its engineering force in half. The reopening of the rate case is the one real hope in the railway field at present.

The iron and steel industry is less active than at any time, save the few months following the 1907 panic, and this comes after the steel industry has been operating from 65 to 75% of capacity for nearly two years.

The export field seems to have been overworked. To have something to sell is only half the problem. Merchants in the United States must arrange to buy; they must arrange to do business on a barter basis. Undoubtedly, sales to South America will increase decidedly, but the benefits for the present will be reached by those houses who established agencies in South America many years ago, who understand the people and customs. It is an opportune time, however, to cultivate this trade, even though it be an expense to do so for a few years.

Price changes have been unimportant. The fall in tin was nearly as spectacular as the advance. Prices are now at the old level. Copper is lower, steel products are not as firmly held, and a definite cut has been made in tin plate. Quotations now are a matter of minor interest.

The situation in cotton-raising states is particularly unprecedented, for in that wide expanse of territory, cotton is the one staple on which all business hinges, and although the crop is enormous, it cannot yet be turned into money. Agricultural returns are particularly satisfactory, and farmers are securing a high price for their products. The wheat belt seems to be exceedingly gratifying.

Orders for export have been received, particularly for munitions of war. These included 6,000,000 horseshoes, 50,000,000 rounds of ammunition, 10,000 saddles, and it is probable that 100,000 horses will be purchased in the United States and Canada in the next few months. In the next two months, the war in Europe should give a decided impetus to the manufacture of automobile trucks, but there will probably be more than a corresponding falling off in the number of pleasure cars sold.

The government is showing some willingness to help business, and it may be that the policy of hitting at every kind of business is past.

Idle freight cars have decreased, and about 95% of the total railway equipment is actively employed. Efforts are being made to permanently establish, in the United States, industries which have always been carried on in Europe. It is evident that with an assured trade of two or three years, many lines of manufacture can be so firmly fixed that they will be able to resist foreign competition.

Labor is feeling the pinch. Some of the railways are paying less than earlier in the year, and good factory help is plentiful.

Labor

The supply far exceeds the demand. An increased efficiency can be expected from all classes of workers. The Brooklyn Rapid Transit, which is doing an unusually large amount of construction and repair work this year, is reported to be paying 17c per hour for rough laborers. On subway work in New York City, \$1.50 is paid for eight hours, and in Long Island the rate is \$1.60. Immigration continues to flow in, and it is evident that there will be a large surplus of unemployed this winter.

A report has just been issued by the Department of Commerce which shows that there are 2,152,433 persons 10 years of age and over in New York City engaged in gainful occupations. The principal workers are distributed as follows: Manufacturing and mechanical industries, 40.6%; transportation, 19.2%; trade, 16.8%; public service, 1.9%; professional service, 0.9%; domestic and personal service, 15.5%; clerical occupations, 10.9%; the remainder being distributed in miscellaneous occupations.

CRUSHED STONE, SAND AND GRAVEL

Crushed Stone.—The market is lifeless and the following quotations are nominal at 90c. to \$1 for 1½-in. stone, and 95c. to \$1.10 for ¾-in. stone. These quotations are for full cargo lots of 500 cu.yd. delivered alongside of dock New York or Brooklyn.

Sand and Gravel.—Gravel is quoted at 90c. for 1½ in., while special gravel for highway applications is quoted at \$1.15.

Sand sells at 50c. per cu.yd. The above quotations are for full cargo lots of 500 cu.yd. delivered alongside of dock New York. In Boston gravel sells at 50c. per cu.yd. at quarry 25 miles out, the freight rate to Boston being 40c.

Cement, Lime and Brick

Cement.—The cement trade is only holding its own. Numerous inquiries have been received for export to South America, but the instability of ocean freight rates is one thing that is preventing any great business to those countries. For example, with a rate of \$1 per ton quoted in the morning, advancing to \$5 in the afternoon, the steamship company finally refused to do anything better than \$10 per ton, and that not more than 48 hours afterward. There is an insistent inquiry, and no doubt considerable business will be transacted. In this country, work is being finished up as rapidly as possible, and no new work started, so that it is evident that the cement mills will face a lean winter. Then, too, the jobbers in New York who frequently stock up their supplies are refusing to place any orders this fall. Prices are unchanged at \$1.55 per bbl. for delivery within lightering limits, New York. This is equivalent to \$1.46, Jersey City, and 95c. per bbl. in bulk at the mill. The quotations given below do not include the allowance of 40c. made for bags returned:

Boston.....	\$1.32	Chicago.....	\$1.15
Cleveland.....	1.30	Detroit.....	1.19
Duluth.....	1.28	Jersey City.....	1.06
Minneapolis.....	1.35	New York.....	1.18
Pittsburgh.....	1.10	St. Paul.....	1.35

Lime.—Business is quiet, but prices are unchanged at 97c. per bbl. for state common, 200 lb. net; \$1.37 for 300 lb. "Star"; \$1.00 for 100 lb. finishing; \$1.10 for 200 lb. finishing and \$1.72 for 350 lb.

Plaster Blocks.—Prices are without change, and the market is fairly active, quotations being as follows:

	Weight, per sq.ft., lb.	Price, per sq.ft., cents
2-in.....	7	6
3-in.....	8½	6½
4-in.....	11	7½

These blocks are made 32 in. long by 13½ in. wide, containing 3 sq. ft. of surface. The 2-in. blocks are solid, but the others are hollow.

Brick.—The market is the lowest in years, and even at that it is weak. Hudson River common brick sell at \$5 to \$5.50, New York. For desirable orders, even these low quotations could be shaded. Manhattan River brick are \$5.25 to \$5.50. The number of brick sold this year is 20% less than those sold at the corresponding period last year, and 1913 was by no means a satisfactory year in the brick market.

IRON AND STEEL

Pig Iron.—While the markets have barely held their own during the last eight weeks, there has been no great pressure to sell, and stocks are not large. This is the one redeeming feature of an otherwise most unsatisfactory market. Curtailment has taken place in so many lines, new construction has been nearly at a standstill, and the reduction to the irreducible minimum has been going on for some time. New buying is limited to positive needs. In the Cincinnati market, a sale of 200 tons is the only one mentioned in the report for the week. This is the market where transactions generally run from 1000 to 10,000 tons. Some of the New England foundries have tested the market for future shipment, but very few orders have been received for delivery in 1915. In fact, all blast furnaces are unwilling to make any quotations for such forward shipment. It is well to observe that the present pig-iron consumption is about 60% of normal.

Quotations for lots of 100 tons or over, ports named, are as follows: Cincinnati Southern Foundry No. 2, \$13.25 to \$13.75; Cincinnati Northern Foundry No. 2, \$13.25 to \$14.75; Cincinnati Northern Foundry No. 3, \$14.00 to \$14.25; New York Northern Foundry No. 1, \$14.75 to \$15; New York Northern Foundry No. 2, \$14.25 to \$14.50; New York Northern Foundry No. 3, \$14.25 to \$14.25; Southern Iron in the New York market is \$14.25 to \$14.50 for No. 2, Southern Foundry No. 2, Birmingham, \$10.

Steel Rails.—Business has been practically at a standstill. It is reported by a prominent official of the Carnegie Steel Co. that one of the railroads in Pittsburgh had not a single extra rail in stock. It is well known that many lines have drawn on their reserve stock to facilitate repairs, and have been taking up from sidings to be put into main tracks. The decision of the Interstate Commerce Commission to reopen the railway rate case will have a most important bearing on the future of the railways, for, unless there is some definite way by which the railways can be tided over the next year, there will be a fall of railway revenues which will be appalling. Prices for rails are nominal and unchanged, as follows:

These quotations are for lots of 500 tons or over: Standard sections of heavier rails, \$28; open-hearth rails, \$30. These quotations are f.o.b. Pittsburgh: 60-lb. rails, 30-ft. lengths, \$36.40 per gross ton, and in 60-ft. lengths, \$38.40, both f.o.b. New York. Other quotations, f.o.b. Pittsburgh, for larger lots are as follows: Standard, \$12.25; 12- and 14-lb. sections, \$11.75; 16- and 20-lb., \$12.00; 12- and 14-lb., \$12.25; 8- and 10-lb., \$13.00. Rolled light rails are one to two dollars less per ton than previous quotations.

Structural Shapes.—Bridge work, as far as new projects are concerned, is practically a thing of the past. Most of the work projected is held up, due to lack of funds. In the building line, there is some work going on in all parts of the country, but it is very much smaller than anything in recent years. New York has more inquiries than any other

	For 1977	For 1978
1. 1977	\$1.00	\$2.00
2. 1978	1.00	1.75

Switch Points—The following prices are named f.o.b., mill, for switch points in lots of ten or more pairs: for 60-lb. rail, 10-ft. points, \$16.25; 15-ft. points, \$17.50; for 70-lb. rail, 10-ft. points, \$18; 15-ft. points, \$25; for 80-lb. rail, 10-ft. points, \$25.50; 15-ft. points, \$27.75; for 90-lb. rail, \$33.50. All of the above are furnished with three rods, except the 10-ft. points for 60- or 70-lb. rail, which have only two.

Lag Screws—The price of lag screws is lower. Cone point lag screws are sold at a base discount of 80% and 5% from list. The net prices are as follows:

Length	Diameter in inches		
	Net per 100		
3 1/2 in.	1 1/2 in.	3/4 in.	1 in.
4 in.	\$1.39	\$2.02	\$4.18
4 1/2 in.	1.06	2.15	4.32
5 in.	1.05	2.28	4.68
5 1/2 in.	1.19	2.35	4.92
6 in.	1.33	2.68	5.42
7 in.	1.51	2.90	5.91
8 in.	1.60	3.21	6.35
9 in.	1.74	3.48	6.90
10 in.	1.78	3.71	7.29
11 in.	2.01	4.01	7.89
12 in.	2.15	4.36	8.38

Frogs—For mill shipments of ten or more, prices are as follows: Bolted frogs, No. 7, for 60-lb. rail, 15; for 70-lb. rail, \$16.50; for 80-lb. rail, \$18; No. 8 frogs for 90-lb. rail, \$21; for 100-lb. rail, \$23. Plate frogs, No. 7, riveted to 5/8-in. plate for 60-lb. rail, \$18; for 70-lb. rail, \$20; for 80-lb. rail, \$21.75; No. 8 frogs riveted to 5/8-in. plate for 90-lb. rail are \$25.50; for 100-lb. rail, \$27.50.

Spiral Riveted Pipe—Prices are without change. The following quotations are f.o.b. factory, freight equalized with New York, being figured at a discount of 50, 10 and 10% from list. These are for orders amounting to approximately \$250. For large orders, prices are cheaper by 12 1/2 to 20%.

Diameter in.	*Thickness Birmingham wire gage	Net price per 100 ft. With bolted joints complete		
		Plain	Asphalted	Galvanized
4	18	\$19.76	\$21.48	\$30.74

30	10	324.81	339.15	430.64

*Made in both lighter and heavier gages at corresponding differences in price.

Wire—Wire business has been cheered considerably on account of the war. There is an inquiry for 5000 tons of barbed wire for shipment to Russia, and quite a little for shipment to Canada. Most of the mills are asking \$1.35 to \$1.40 for plain wire, \$2 for galvanized barbed wire, and \$1.60 for painted barbed wire, all f.o.b. Pittsburgh.

Nails—Carload lots of wire nails are quoted at \$1.60 Pittsburgh. There are very few new orders.

Coke—Prices continue to decline with the falling off in the demand. The best grades of blast-furnace coke sell at \$1.60/1.65 for prompt delivery and \$1.75/1.85 per net ton for contracts. For 22-hr. foundry coke, \$2 1/2 to 2.10 can be done for spot and \$2.15/2.25 on contract.

METALS

Copper—Trade has not been so dull in years. Curtailment of production is now general at all of the principal mines, and will continue to be more so unless there is a decided change. It is evident that new levels for copper quotations must be established for years to come at a lower rate. For many years, it was generally agreed that copper under 15c per lb. was cheap, and many manufacturers would have been willing to see the market on a 15c basis. Conditions have now changed. The electrical industry, which has consumed fully 50% of the copper output, has received a serious setback, and will not be as active again for years. In the meantime, the supply of copper far exceeds the demand, and of necessity the mines, which produced metal at a high cost must go out of business. Future prices of copper are likely to be around 12c. There is practically no business now and no established market, but enough is known of the situation to warrant a quotation of 11 1/2c for large lots of electrolytic. Lake copper is in relatively fair demand, particularly sheet and Hecla brands, which have been freely bought by manufacturers of cartridges in New England who have use for that metal. It is significant to note that copper in Germany is selling at about 19c per lb. The German importations of copper have been the mainstay of the American market for years, and now that is absolutely cut off.

Tin—Large shipments of tin are being sent to this country and the supply is now far in excess of the demand. The market is more or less irregular, but frightfully dull. Less business was transacted in the last week than similar periods for years past. Quotations are more or less nominal and it seems probable that a 30c. level, to which prices seem to

be drifting, will be a maximum rather than a minimum quotation.

Lead—The market is easier, lead being obtained in New York at 2.50c and in St. Louis at 3.60c. There is no need of exporting lead to Great Britain or France, as the supply formerly went to Germany, but is now being diverted to Great Britain.

Spelter—The market has again declined and is about at the old low quotation. In New York, 5.35c is asked, and in St. Louis 5.20c. The foreign demand is small, but has shown some improvement due to the lower quotation.

Antimony—The market is exceedingly quiet and the quotations to jobbers are more or less fictitious, but they ask 11c. for Cookson's and 10c. for Hall's.

Miscellaneous Metals—The following quotations are per lb. for small lots, but they may be shaded for desirable orders:

Bismuth	\$4.00
Brass tubes, iron-pipe sizes:	
1/2-in.	17
3/4-in.	16
1-in.	16
1 1/4-in.	17
Brass rods	14 1/2
Brass sheets	14 1/2
Solder, half and half guaranteed	26
Zinc sheets	9 to 9 1/2
Copper sheets, base	17 1/2
Pig tin (five-ton lots, cash)	33

Old Metals—The following quotations are for small lots delivered at buyer's warehouse:

Copper, heavy and crucible	11.00
Copper, heavy and wire	10.75
Copper, light and bottoms	10.00
Brass, heavy	7.50
Brass, light	5.75
Heavy machine composition	10.00
Composition turnings	9.00
Lead, heavy	3.40
Lead, tea	3.15
Zinc scrap	3.15

REINFORCING MATERIALS

Bars, Concrete Reinforcing—Prices are steady but the volume of business continues to diminish. Quotations are as follows:

Size	Cents per pound		Delivered from warehouse New York
	Mill shipments Pittsburgh	Warehouse Pittsburgh	
3/4-in. and larger	1.20	1.70	2.30
5/8-in.	1.25	1.70	2.35
3/4-in.	1.40	2.00	2.35
5/8-in.	1.50	2.10	2.50
3/4-in.	1.80	2.35	2.80

Triologic Mesh—Quotations are without change as follows:

PRICE PER 100 SQ. FT.

Style No.	Cross sec. area per ft. with	Plain material		Galvanized	
		Carload lots	Less than car lots and over 10,000 sq. ft.	Carload lots	Less than car lots and over 10,000 sq. ft.

10x12	0.10	24 1/2	0.34

Hydrox preservative paint is 75 cents per gal. in bbl.
lots, New York City.

Colors in oils are quoted at the following prices per lb.:
lamp black, 2 to 11 cents; Chinese blue, 36 to 16 cents;
Prussian blue, 32 to 35 cents; Van Dyke brown, 11 to 14
cents; Chrome green, 7 to 16 cents; Raw or Burnt Sienna, 12
to 15 cents; Raw or Burnt Umber, 11 to 14 cents.

LUMBER

The markets have been hard hit by the war, and prices are
low. The Pacific Coast trade which has been in bad shape for
years has been helped a little by the opening of the Panama
canal. Hardwoods are very dull but prices are only slightly
lower. Spruce and hemlock are dull but show only slight
recessions in price. There is much irregularity in quotations
for white pine mill have stock another may be obliged to
buy. The same material and often variations as much as
5¢ per thousand are found.

MISCELLANEOUS

Lighterage Limits.—The free delivery or "lighterage Lim-
its" in New York City are as follows: In Manhattan, from a
point opposite the Fort Lee ferry south along the Hudson
River around the Battery and north along the East and Harlem
Rivers to the Jerome Ave. Bridge at 155th St. In New
Jersey, south from Fort Lee ferry to Bayonne City, points on
the north and east shores at Staten Island, between Bridges
Creek (Arlington) and Clinton, both inclusive, and including
Kino Park, Erastina and Shooters Island. In Brooklyn, from
4th St. Park Ridge, north to Pot Cove, Astoria, Long Island
City.

Asbestos.—Asbestos building felt and sheathing in less
than 100-lb. lots is 34¢ per lb. for the light, weighing from 6
to 30 lb. per 100 sq. ft.; 4¢ per lb. is charged for the heavy,
weighing from 45 to 56 lb. per sq. ft.

Millboard is made in standard sheets, 40x40 in. and 41x40
from 2 to 27 lb. per sheet. The net price in 100-lb. lots is 5¢
per lb.

Asbestos wood, used for fireproofing, ventilators and smoke
jacks, comes in sheets, 36x48 in., 42x48 in. and 42x96 in. The
prices per sheet, 100-lb. factory, in New England, are as follows:

Thickness	Weight, pounds	Price	Thickness	Weight, pounds	Price
1/4 in.	1	\$0.05	3/4 in.	5	\$0.10
1/2 in.	2 1/2	0.12	1 in.	6	0.14
3/4 in.	3 1/2	0.16	1 1/4 in.	7	0.16
1 in.	4 1/2	0.20	1 3/4 in.	8	0.18
1 1/4 in.	5 1/2	0.24	2 in.	10	0.24
1 3/4 in.	6 1/2	0.28	2 1/4 in.	12	0.32
2 in.	7 1/2	0.32	2 3/4 in.	14	0.36
2 1/4 in.	8 1/2	0.36	3 in.	16	0.40

Asbestos sheathing corrugated, sells at 15¢. per sq. ft.
fub. mill eastern Pennsylvania

Telegraph Wire.—The demand for telegraph wire has been
fair. For lots of fair size, the wire measured in Birmingham
wire gauge prices are as follows: "Extra Best," Nos.
6 to 14, Nos. 10 and 11, 1¢; No. 12, 1 1/4¢; No. 14, 1 1/2¢;
"Best Best," Nos. 6 to 14, 1 1/4¢; Nos. 10 and 11, 1 1/2¢; No. 12,
1 3/4¢; No. 14, 1 1/2¢. Actual freight is allowed from Trenton,
N. J., where it does not exceed 25¢ per 100 lb.

Explosives. Dynamite of the kind generally used by con-
struction is manufactured in 100-lb. lots. The price for 100
lbs. of blasting powder, classified as "soda" grade, is sold
at \$1.20 a 100 lb. per keg of 25 lb. in lots of 10,000 lb.

Explosives, per hundred, are sold at the following prices:
1 ft., \$1.60; 2 ft., \$1.10; 3 ft., \$1.00; 4 ft., \$0.90; 5 ft., \$0.80;
6 ft., \$0.70; 7 ft., \$0.60; 8 ft., \$0.50; 9 ft., \$0.40; 10 ft., \$0.30;
11 ft., \$0.20; 12 ft., \$0.10; 13 ft., \$0.05; 14 ft., \$0.02; 15 ft., \$0.01.
Blasting machines for 10 holes are \$12, 25 holes, \$20; 50
holes, \$40; 100 holes, \$60.

Chain Belting. Prices continue unchanged. Quotations
are as follows: From 2 hp. to 10 hp., 26-in. centers complete,
\$1.10; sprockets, \$1.10 per horsepower. From 10 hp. to 25
hp., 26-in. centers complete, \$1.05 per horsepower. For 25
hp. to 50 hp., 26-in. centers complete, \$1.00 per horsepower.
From 50 hp. to 100 hp., 26-in. centers complete, \$0.95 per
horsepower.

Resumption of Export Trade. The war seriously curtailed
exports from the United States during August, but they have
been resumed on a large scale from New York. For
example, in August, Sept. 6, the exports from New York were
\$1,000,000 compared with \$114,000,000 in the corresponding
month last year. In the week ending Aug. 27, exports fell to
\$1,000,000 from \$1,000,000, but since that date there has
been a steady gain. The exports from New York since Jan.
1 have totalled \$1,000,000 compared with \$149,000,000 in the
corresponding time last year.

Old Ford Grounds Firm to Move. The firm of Arnold, Con-
struction Co., for many years located at 331 Broadway, New
York, N. Y., has sold property at Fifth Ave. and 40th St.
and is moving to a new building at 100th St. and 40th St.
The new building, of the leased site for its exclusive
use. The building of this company, known as the re-
sidence of the firm, is well known on Grand from the 15th St.
to the 100th St. on Grand.

CATALAN WANTED

Engineer, 11 years, 10 years in Municipal Engineering,
Municipal Engineering, would like to receive
information from manufacturers of power
steel sheet piling, castings, trenching machinery, and
for concrete and supplies used in sewer construction,
and to be used in the course in municipal engineering at
the university.

Construction News

Items in the several departments are grouped according to states, which, in turn, are arranged geographically in the following order: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Tennessee, Kentucky, Ohio, Indiana, Michigan, Illinois, Wisconsin, Iowa, Minnesota, Kansas, Nebraska, South Dakota, North Dakota, Wyoming, Montana, Missouri, Arkansas, Texas, Oklahoma, Colorado, New Mexico, Idaho, Utah, Nevada, Arizona, Washington, Oregon, California.

Pan American Trade—A Warning

A special news memorandum of caution and warning regarding the Latin American commercial situation has been prepared by John Barrett, Director General of the Pan American Union, the international organization maintained in Washington by all the American republics for the development of commerce, intercourse, good understanding and peace.

The widespread and unprecedented public interest in the Latin American commercial opportunity as developed by the European war is being followed by so much misconception, in many circles, of the real trade and economic conditions obtaining in certain parts of Latin America, that Director General John Barrett of the Pan American Union in Washington has deemed it necessary to ascertain by cable the exact business situation in Latin America, and, as a result, to sound, in justice both to the United States and Latin America, a note of caution and warning.

On August 8, immediately after the outbreak of the European war, Director Barrett addressed a memorandum to the commercial and financial interests of the United States urging them to prepare to meet the combined responsibility and opportunity presented in Latin America by the war. This statement attracted general attention and discussion, but now a new phase of the situation, as indicated by these cable reports, has developed and is requiring careful consideration.

"These advices," he states, "emphasize that what is needed at this hour in Latin America is not so much a supply of the manufactured products of the United States, although required in considerable quantities, but money, loans and advances, credits on purchases, and markets at reasonable rates for raw products which usually go to Europe. In Latin America can sell at a fair figure her accumulating raw products and buy, in turn, through receiving financial help and cooperation in the form of advances and credits from United States exporters, importers and bankers, the situation will be speedily remedied and the commercial interests of the United States and Latin America will truly enter upon a new era of Pan American commerce and unity.

"The fact that the twenty Latin American countries last year bought imports and sold exports to the vast total of \$3,000,000,000, of which \$2,000,000,000 were transactions with Europe, proves beyond quibble or doubt that the opportunity is there but subject to the conditions herein noted. That the United States already has a good start and is making encouraging progress is shown by the fact that its exchange of trade with Latin America has grown in the last seven years, or during the present administration of the Pan American Union, nearly 100 per cent. or from \$450,000,000 to \$850,000,000.

"The European war, while greatly lessening the sources of the Latin American imports and the market for exports, and opening a corresponding greater opportunity to United States exports and imports, has so unavoidably crippled Latin American financial resources and commercial machinery that it must require several months or a year before conditions can readjust themselves and permit results that many United States business men expect immediately.

"Despite the efforts, not only of the Latin-American embassies, legations and consulates, but of the Pan American Union, an international organization maintained by the United States Departments of State and Commerce to state the situation exactly as it exists, countless articles have been appearing in various newspapers and magazines emphasizing an alleged 'golden opportunity' without pointing out its actual and present environments of money tightness and dislocation of international commercial methods. Numerous business men and commercial agents, in consequence, are crowding the United States and Latin America with the expectation that they will find the Latin Americans awaiting them with outstretched hands filled with gold and ready to buy everything and anything they have to sell. These men will presently return to the United States and unfairly condemn and criticize the markets and peoples of the countries visited.

"A great stream of letters and telegrams from both North and South America are daily pouring into the office of the Pan American Union, as the International American bureau of information, and they give the widespread interest in the field and opportunity, but they are invariably answered not only with the statement of the actual opportunity but with the admonition that the Latin American market, while vastly potential, is at this moment embarrassed by a serious financial stringency and dislocation of commercial conditions for which it is not in itself to blame.

"The opportunity of the hour, therefore, in a word, is not so much one for immediate large sales of United States manufactured products as one for cooperation and mutual help, together with careful investigation of commercial conditions and preparation to meet future competition successfully."

RAILWAYS

North Carolina—Plans are being prepared for the construction of a railroad from Kingston to Maple Hill, N. C. about 35 miles. J. T. Deal, Kingston, N. C., is interested.

South Carolina—Savannah Western Ry.—Surveys are being made by this company for the construction of a railroad from East to St. Paul, S. C. about 90 miles. C. H. Milligan, Charleston, S. C., is interested. Noted Sept. 3.

Tennessee—Alabama Great Southern Ry.—According to press reports this company plans to spend about \$85,000 for the construction of a belt line in Chattanooga, Tenn. C. Dougherty, Cincinnati, Ohio, is Ch. Engr.

Wisconsin—Chicago & Lake Superior Ry.—This company has awarded a contract to MADDEN & CONNELL for grading its proposed extension from Cambridge, Wis. to Rockdale, Wis.

Minnesota—Minnesota Central R.R.—This company has awarded the contract for the construction of its line from St. Cloud to Kimball and Fairhaven, Minn., to F. J. GLOVER & SONS, Minneapolis, Minn.

Kansas—Newton, Kansas & Nebraska R.R.—Preliminary arrangements are being made by this company for the construction of a railroad through Harvey, McPherson, Marion and Dickinson Counties. S. V. Wardall, Newton, Kan., is Ch. Engr.

South Dakota—South Dakota Central Ry.—A contract has been awarded by this company for constructing a 16-mile extension to its line north from Watertown, S. D., to P. E. SHUGART, Nevada, Iowa.

Oklahoma—Rosston, Grand Rapids & Protection R.R.—Surveys have been started by this company for the construction of its proposed 12-mile railroad to connect a point on the Wichita Falls & Northwestern Ry., near Rosston, Okla., with Doby Springs, Okla. L. A. Walton is Pres. and Gen. Mgr. Noted Sept. 10.

Washington—Bellingham & Northern Ry.—A contract has been awarded by this company for the construction of a three-mile extension to its line from Bellingham to Lake Whatcom, to HENRY McFEE, Seattle, Wash.

Arizona—J. A. Veness, Winlock, Wash., and associates are considering plans for the construction of a railroad from Wilcox to the mining district, about 20 miles.

California—Plans are being prepared for the construction of a railroad from Crescent City, Calif., to Yreka, Calif., with several branch lines. H. S. Wooley is interested.

ELECTRIC RAILWAYS

Pittsfield, Mass.—The Berkshire St. Ry. Co. has applied to the City Council for a franchise to reconstruct its line from White Terrace to St. Joseph's Church, in Pittsfield. C. Q. Richmond, Pittsfield, is Mgr.

Winchendon Springs, Mass.—The Northern Massachusetts St. Ry. Co. contemplates the extension of its line to Winchendon Springs. J. A. Taggart, Greenfield, Mass., is Gen. Supt.

Albany, N. Y.—The City Council has granted a franchise to the United Traction Co. to construct and operate an electric railway from North Pearl St., on Sheridan Ave., to Chapel St. James F. Hamilton, Albany, is Gen. Mgr.

Bayport, N. Y.—The Suffolk Traction Co. has been granted franchises and is making preliminary arrangements for the extension of its lines from Bayport to Sayville and West Sayville. J. C. Brackenridge, 15 Liberty St., New York, N. Y., is Gen. Mgr. and Ch. Engr. Noted Sept. 3.

North Tonawanda, N. Y.—The International Ry. Co. has been granted franchises to construct an electric railway in North Tonawanda and Tonawanda. J. A. McKenna, Buffalo, is Secy.

Orange, N. J.—The Public Service Ry. Co. has been granted permission to extend its lines on Central Ave. R. E. Danforth, Newark, is Gen. Mgr.

Parrell, Penn.—The Valley Street Ry. Co. has been granted a franchise to construct and operate an electric railway in Parrell. R. P. Stevens, Youngstown, Ohio, is Vice-Pres.

Watsontown, Penn.—Arrangements are being made by the Lewisburg, Milton & Watsontown Passenger Ry. Co. for the extension of its line in Watsontown to the borough line. W. W. Wilson, Milton, is Gen. Mgr. and Pur. Agt.

Washington, D. C.—The Washington Ry. & Electric Co. has been ordered by the Public Utilities Commission to extend its Anacostia line from Nichols Ave. and Fourth St. for a distance of a mile. R. W. Crowell, Washington, is Pur. Agt.

Florence, Ala.—The Florence & Huntsville Interurban Ry. Co. has been incorporated to construct an electric interurban railway from Florence to Huntsville, with a branch line from Kilbuck to Lexington, Tenn. Thurston H. Allen, Pres.; T. W. Pratt, Vice-Pres., and N. F. Thompson, Secy.-Treas.

West Point, Miss. The Mississippi River and Gulf Coast Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at West Point, Miss. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the West Point Electric Co. by the U. S. Army. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the West Point Electric Co. by the U. S. Army.

Galveston, Tenn. The Galveston Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Galveston, Tenn. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Galveston Electric Co. by the U. S. Army.

Middletown, Ohio. The Middletown Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Middletown, Ohio. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Middletown Electric Co. by the U. S. Army.

Indianapolis, Ind. The Indianapolis Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Indianapolis, Ind. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Indianapolis Electric Co. by the U. S. Army.

Murphy, Okla. The Murphy Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Murphy, Okla. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Murphy Electric Co. by the U. S. Army.

Corpus Christi, Tex. The Corpus Christi Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Corpus Christi, Tex. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Corpus Christi Electric Co. by the U. S. Army.

Golden, Colo. The Golden Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Golden, Colo. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Golden Electric Co. by the U. S. Army.

Chico, Calif. The Chico Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Chico, Calif. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Chico Electric Co. by the U. S. Army.

Los Angeles, Calif. The Los Angeles Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Los Angeles, Calif. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Los Angeles Electric Co. by the U. S. Army.

San Francisco, Calif. The San Francisco Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at San Francisco, Calif. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the San Francisco Electric Co. by the U. S. Army.

Fort Williams, Ont. The Fort Williams Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Fort Williams, Ont. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Fort Williams Electric Co. by the U. S. Army.

Peterborough, Ont. The Peterborough Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Peterborough, Ont. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Peterborough Electric Co. by the U. S. Army.

Lumberton, Ala. The Lumberton Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Lumberton, Ala. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Lumberton Electric Co. by the U. S. Army.

Vanouver, B. C. The Vanouver Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Vanouver, B. C. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Vanouver Electric Co. by the U. S. Army.

ELECTRICITY AND POWER

Manchester, Conn. The Manchester Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Manchester, Conn. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Manchester Electric Co. by the U. S. Army.

New York, N. Y. The New York Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at New York, N. Y. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the New York Electric Co. by the U. S. Army.

Niagara Falls, N. Y. The Niagara Falls Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Niagara Falls, N. Y. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Niagara Falls Electric Co. by the U. S. Army.

Hartford, Conn. The Hartford Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Hartford, Conn. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Hartford Electric Co. by the U. S. Army.

Portland, Me. The Portland Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Portland, Me. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Portland Electric Co. by the U. S. Army.

Boston, Mass. The Boston Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Boston, Mass. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Boston Electric Co. by the U. S. Army.

Worcester, Mass. The Worcester Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Worcester, Mass. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Worcester Electric Co. by the U. S. Army.

Springfield, Mass. The Springfield Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Springfield, Mass. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Springfield Electric Co. by the U. S. Army.

Providence, R. I. The Providence Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Providence, R. I. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Providence Electric Co. by the U. S. Army.

Lowell, Mass. The Lowell Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Lowell, Mass. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Lowell Electric Co. by the U. S. Army.

Andover, Mass. The Andover Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Andover, Mass. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Andover Electric Co. by the U. S. Army.

Asheville, N. C. Preparations are being made in the west-end of North Carolina for the construction of a great electric plant on the Tennessee-North Carolina line. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Asheville Electric Co. by the U. S. Army.

Jacksonville, Fla. It is reported that the city will install a new electric plant at Jacksonville, Fla. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Jacksonville Electric Co. by the U. S. Army.

Palm Beach, Fla. At the election held on Sept. 15, the city of Palm Beach, Fla. voted to install a new electric plant at Palm Beach, Fla. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Palm Beach Electric Co. by the U. S. Army.

Florence, Ala. The Florence Electric Co. recently installed a new electric plant at Florence, Ala. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Florence Electric Co. by the U. S. Army.

Abilene, Tex. The Abilene Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Abilene, Tex. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Abilene Electric Co. by the U. S. Army.

Meriden, Conn. It is reported that the city will install a new electric plant at Meriden, Conn. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Meriden Electric Co. by the U. S. Army.

Princeton, Ky. The question of a bond issue of \$15,000 for the installation of a municipal electric light plant will be submitted to the voters at the November election.

Sullivan, Ill. Plans are under way for the establishment of a municipal electric light plant at Sullivan, Ill. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Sullivan Electric Co. by the U. S. Army.

Lincoln, Neb. Bids will be received until Oct. 15 by the City Council for improvements to the electric-light plant and water works system. The contract was awarded to the Lincoln Electric Co. by the U. S. Army.

Parker, S. D. The City Council has awarded the contract for the construction of the municipal electric-light plant to the J. M. McKee Co. of Fort Dodge, Iowa, at \$15,225. The contract was awarded to the J. M. McKee Co. by the U. S. Army.

Malta, Mont. It is reported that Shady & Leveson, Malta, have applied to the City Council for a franchise to install an electric light plant in the city.

Edgerton, Mo. The McGowan Hydro-Electric Power Co., Edgerton, Mo. has awarded contracts (without bids) to the GEN. ELECTRIC CO., Schenectady, N. Y. for machinery, LAMPS, LUTHER CO., St. Louis, Mo. for turbines, and the J. P. HILSON & SONS MFG. CO., Enterprise, Kan., for the transmission system for the new plant which will furnish electricity to the town in the vicinity. The dam for the power is being built on the Platte River one mile west of Edgerton. J. M. McKee is Edgerton's chief promoter of the company. C. B. Granger, Lincoln, Neb. is Engr. in Charge.

Kirkwood, Mo. The board of Aldermen has authorized improvements to the municipal electric-light plant, to cost about \$10,000. The Board of Public Improvements will have charge of the work.

Corpus Christi, Tex. The Corpus Christi Gas Co. is building a new gas system in the city and will have about \$25,000 for the system.

Marble Falls, Tex. The city has issued a bond issue for the construction of a new electric light plant and water works system. The contract was awarded to the Marble Falls Electric Co. by the U. S. Army.

Decatur, Ga. The Southern Electric Power Co., San Francisco, Cal. has been awarded a contract by the U. S. Army for the construction of a power plant at Decatur, Ga. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Southern Electric Power Co. by the U. S. Army.

Durham, Que. The City Council has decided to build a new electric plant at Durham, Que. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Durham Electric Co. by the U. S. Army.

Shore, Ont. The City Council has decided to equip a new electric plant at Shore, Ont. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Shore Electric Co. by the U. S. Army.

BRIDGES

Portland, Maine. Bids will be received until Oct. 15 for the construction of a new bridge at Portland, Maine. The bridge will be a steel truss bridge. The contract was awarded to the Portland Bridge Co. by the U. S. Army.

Hillingham, Mass. The Hillingham Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Hillingham, Mass. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Hillingham Electric Co. by the U. S. Army.

Dorham, Mass. The Dorham Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Dorham, Mass. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Dorham Electric Co. by the U. S. Army.

Central Falls, R. I. The Central Falls Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Central Falls, R. I. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Central Falls Electric Co. by the U. S. Army.

Andover, N. Y. The Andover Electric Co. has been awarded a contract by the U. S. Army for the construction of a power plant at Andover, N. Y. The plant will be a steam-electric unit of 10,000 kw. capacity. The contract was awarded to the Andover Electric Co. by the U. S. Army.

New York, N. Y.—(Borough of Bronx)—(Official)—Bids will be received until 10:30 a.m., Oct. 8, by Douglas Mathewson, Pres. Borough of the Bronx, for repaving, cleaning and painting the bridge over the tracks of the New York, New Haven & Hartford R.R. at East 153d St. The Engineer's estimates are as follows: 40,000 lb. of steel and iron in truss members, 50,000 lb. of steel in floor built members, 75,000 lb. of steel in roof members in floor, 55,000 lb. steel in buckle plates, 9,000 lb. iron castings, 500 sq. yd. pavement removed, cleaning and painting.

♦**Syracuse, N. Y.**—The Board of Contract and Supply has awarded the contract for the construction of two bridges across Onondaga Creek, one at Oxford St. and the other at West Newell St. to the HOOKWAY CONSTRUCTION CO., at \$9810 and \$8675 respectively.

♦**Harrisburg, Penn.**—The following bids were opened Sept. 23 by the Commissioners of Dauphin County for bridge construction: Bridge over Swatara Creek between Royall and Middletown, (a) steel, (b) concrete: G. W. Ensign, Inc., (a) \$19,958, (b) \$21,103; the Ferro-Concrete Co., (a) \$20,988, (b) \$16,545; Pennsylvania Steel Co., (a) \$19,990; Whitaker & Diehl, (a) \$19,990; Whitaker & Diehl, (b) \$18,000; Bridge over Wisconsin Creek, Ferro-Concrete Co., \$8847; G. W. Ensign, Inc., \$6762; Whitaker & Diehl, \$13,964. Noted Sept. 10.

♦**New Castle, Penn.**—(Official)—The Commissioners of Lawrence County have awarded the contract for the construction of a 50-ft. concrete arch over Hettenbaugh Run, Hickory Township, to C. E. KIMBROUGH, St. Cloud Bldg., New Castle, at \$3130. There were nine other bids ranging from \$3598 to \$5600. Noted Sept. 10.

♦**Philadelphia, Penn.**—The Department of Public Works has awarded the following contracts for repairing and repainting bridges: AMERICAN PAVING & CONSTRUCTION CO., at \$10,550 for the bridge at 10th St. and Lehigh Ave., and \$8800 for the bridge at Schuylkill and Lehigh Ave., and \$5900 for the bridge over the Schuylkill River on the line of Girard St.; W. A. MUNDY, \$7070 for the Market St. Bridge.

♦**Baltimore, Md.**—The State Roads Commission has awarded the contract for the construction of the draw span in 48 ft. longer, having two spans 122 ft. each, two of 66 ft. each, and five piers containing about 550 cu. yd. rubble masonry. The bridge is on the SPROBEL STEEL CONSTRUCTION CO., Chicago, at \$86,430. List of bidders noted Sept. 24. The Commission also awarded the contract for the excavation and fill for the city end of the Hanover St. Bridge under the Hanover St. Bridge to the SPROBEL STEEL CONSTRUCTION CO., Chicago, at \$4140, and the contract for the excavation and fill for the bridge to the LUCK CONSTRUCTION CO., Roanoke, Va., at \$54,900.

♦**Frederick, Md.**—The State Roads Commission, Baltimore, has awarded the contract for the construction of a bridge across the Potomac River at Frederick, to the LUTEX BRIDGE CO., York, Penn., at \$15,500.

♦**Fayetteville, N. C.**—(Official)—Bids will be received until noon, Oct. 12, by the Commissioners of Cumberland County for the construction of a number of concrete bridges in the county, to cost less than \$25,000 more than \$30,000. Fulton R. Hall is Clerk of the Bd.

♦**Dalton, Ga.**—Bids will be received until Oct. 6, by H. J. Wood, Ordinary and Chm., Board of Roads and Revenue, for the construction of a bridge across Mill Creek, on the Dalton and Spring Hill Road about 3 1/2 miles east of Dalton, Ga.

♦**Danville, Ga.**—Bids will be received until Oct. 21 by the Commissioners of Madison and Elbert Counties at Danville for the construction of a steel bridge over the Broad River at Moore's Shoals near Carlton. The bridge will be 184 ft. long, having two spans 122 ft. each, two of 66 ft. each, and five piers containing about 550 cu. yd. rubble masonry. Searcy B. Slack, Athens, Ga., is Engr. J. W. Draper, Danville, is Supt. of Roads and Bridges.

♦**Greenville, Miss.**—Bids will be received until Oct. 5 by the Board of Commissioners of Washington County for the construction of three steel bridges in Bogue Paha Drainage District; two will be 180 ft. long each, and the other 75 ft. long. These will be the first of about 45 bridges to be built in this district. Morgan Engineering Co., Memphis, Tenn., is Engr. in Charge.

♦**Pittsboro, Miss.**—Bids will be received until Oct. 6 by the Highway Commissioners of Supervisors' District No. 1 for building a number of bridges on the road from Pittsboro to the eastern bounding line of the district, and on the road from that line to the river crossing near Old Town. A. A. Bruner and W. R. Byars are Comrs.

♦**New Orleans, La.**—(Official)—Bids will be received until 11 a.m., Oct. 26, by the City of New Orleans, for the construction of a steel truss bridge 111 ft. long, at the intersection of Basin Canal on the axis of City Park Ave. A. G. Ricks is Comr. of Public Finances. For further details, see advertisement under "Contracts to Be Let."

♦**New Orleans, La.**—Press reports state that the New Orleans Ry. has agreed to build a new bascule bridge at West End in place of the foot bridge now in use at the lake resort. The bridge will cost about \$40,000. Hugh McCloskey is Pres. of the New Orleans Ry. & Light Co.

♦**Lawrenceville, La.**—Bids will be received until Oct. 3 by the Police Jury of the Parish for the construction of a steel drawbridge across Bayou Grosse Tete Bay. W. A. Holloway is Pres. of the Police Jury.

♦**Memphis, Tenn.**—The City Council has awarded the contract for the construction of a concrete arch culvert to A. M. ALLEN, Memphis, at \$8760.

If we allowed the currency supply to become inadequate for our requirements, we might incur the penalties of confiscation and ruin on the innocent many to the enrichment of the designing and remorseless few.

"If we should allow inflation of the currency away from safe and sound basis of actual and irreproachable value, we would be like a man drinking himself to frenzy and torpor while his honor and the safety of his home depended on his steadiness and strength. Therefore, we have felt and tested and added to our own wisdom and boldness and courage and carefully; to act promptly, but with thoughtful provision for the situation as it is, while keeping alert eyes on the possibilities of the days and months to come.

"In this hour of our united life, it is deeply gratifying to me to be able to certify how much the country owes of its growing prospects and increasing stability to the genius, skill and generous, patient, broad patriotism of its bankers in all sections. Those of New York, Chicago and other large cities have not only willing but zealous in cooperation and with valuable and timely service. Most of them have tendered their resources and their services to help the public interest. But the people of all grades and sections have, as a general rule, done what they could to forward a difficult and complicated labor.

The administration has been given full cause to feel gratefully and exultantly that the common defense and the general welfare are involved, the free citizens of the United States have no lines of differences in politics, in sections, in social grades or the distribution of the favors of Fortune. The people, regardless of class, are united in a just and cheerful sanction to every movement and act approved by their reason as being for the good of the republic.

The work of adjustment and of getting the machinery of business forward and in operation is not yet completed; but it is well started with safe and efficient methods. We and our business machinery will be required to work not only for ourselves, but for the world. The task is enormous, but it is not insurmountable. In protecting our own stability, we protect the world's finance and commerce. In conserving the interests of the other that practice, we conserve our own and improve the opportunities for the world. In the face of our responsibilities, the prospect of illimitable expansion confronts us."

Trade with Brazil.—In a recent issue of the "Daily Consular and Trade Reports," the following article on the present trade situation in Brazil, written by the consuls, appears:

"At this is the dull season, about the only merchandise to be shipped consists of rubber, although it is possible that some green and sun-dried hides, which ordinarily go to Germany, will go forward, especially if arrangements can be made to fumigate the dried hides, sacking them being out of the question on account of cost.

"Aside from this, the situation here is very complicated because of the lack of sufficient money with which to handle business, the uncertainties of the exchange market, which is largely in the hands of European bankers and the increase in freight and insurance rates. Until these matters are adjusted, business will be very difficult for merchants to do business, and especially with the United States, as there are no American banks or shipping companies.

"Furus," which carries this dispatch, will leave here in a few days with a fair amount of rubber, most of which is billed to order and is in course of an experimental shipment. The continuance of shipping in this way will depend upon the result of the sales in this instance.

"Withdrawing from the complicated banking situation, local collections for foreign orders are continuing, but orders for new goods will be limited in amount, and it will be estimated where the exchange rate will establish itself. By the same time, no doubt, American exporters are insisting upon cash for their orders.

"Anxiety as to future coal supplies is becoming more and more apparent as efforts to charter steamers continue to fail. The firm has offered as a special inducement to prepay freight, but to date has failed to arrange for a steamer. The prices of coal, \$3.15 per ton, f.o.b. shipping port, is considered reasonable in view of the circumstances, and it is to be hoped that some means will be found to solve transportation difficulties.

"The daily papers have been most active in advising the local public of the action of American trade and commercial associations and their intentions as regards this market, and as much of our business relations with this market depends upon the initial action of the American exporters, it is hoped that he will be able to fulfill the promises implied in the action taken by the associations.

"There is an excellent demand here at present, on account of the European war, for all staples, such as corn, flour, canned goods, smoked meats, beans, oil, prints, shoes, hats, hardware, coal, machinery, electrical supplies and drugs.

"Foodstuffs, which we have already mentioned, are selling in price since the beginning of the month. Corn is selling at \$10 per ton, but it is understood that the English that the two leading dealers in Pernambuco (both of whom are English) have on hand. The tramways and gas companies have enough coal to last six weeks only.

"The firm, Griffith, Pernambuco, is at a loss to the payment of merchandise ordered and shipped at present for the banks are all closed by order of the Brazilian Government, and has been for the last two weeks. It is reported will be such a run that they may be forced to close within established time. With New York houses having known and represented representatives here, the situation is different, inasmuch as payments for goods ordered may be deferred indefinitely.

"The best way to send supplies to Pernambuco at present is by steamers of neutral flag. The Lloyd Brasileiro, New York and Brazil, which for some time has been discussing New Sugar and cotton are the chief exports, and as this is one of the richest and most fertile sections of Brazil, sugar now, and the natives are beginning to realize how much

they are dependent upon the outside world for supplies. Thousands are unemployed and many families are already suffering. There is little money and prices are very high. The Government of Argentina will not export any more flour, and the only source of such supplies for Brazil is the United States.

"Competent representatives thoroughly conversant with the customs and language of the people of this country should be sent out immediately if at all possible. Brazilians are not prejudiced against American goods at any time, and business connections can now be formed which may endure indefinitely."

Training Dye Makers.—Under the direction of Dr. Allen Rodgers of Pratt Institute Brooklyn, a miniature factory has been set up to make American dyes from American raw materials and is also proposed to train young men to become foremen of American dye factories.

In "American Industries" the official organ of the "National Association of Manufacturers," Harold Lambert Allen has printed a lengthy article from which the following extracts have been taken.

"Prior to the beginning of the European war it was not generally realized to what extent many industries of the United States are dependent on foreign supplies. We had grown accustomed to think of this country as the source of raw materials for European factories, rather than the consumer dependent on foreign products in a large measure for the maintenance of some of our largest industries—dyes for the textile, leather and paper trades. Although during the last five years the imports of dyestuffs into the United States have remained practically stationary, owing to the enlargement of the output of such large quantities of dyestuffs dependent on Germany for such large quantities of dyestuffs that the stoppage of imports since the beginning of the war presents a serious problem to the consumers of those commodities.

"Figures obtained from official sources show that the total average purchases from abroad of alizarin and other coal tar colors have been about \$10,000,000 annually during the past six years. In 1913 the total value of imported dye stuffs from all foreign countries was \$10,395,744. The imports of aniline salts. Of this amount Germany furnished \$8,576,020, while during the unfinished year 1914, we have imported from that country sufficient dye stuffs valued at \$7,940,061, indicating that had the war not occurred the imports for both years would have been about equal. It is reasonable to assume that had there been any great discrepancy between the imports of 1913 and 1914, they would have been larger this year, since we have already imported \$3,925,550 of dyestuffs of finished coal tar colors (not including alizarin, aniline salts or indigo) this year, in comparison with the somewhat smaller value of \$3,740,000 of the same products during 1913. At all events it is obvious that the hiatus left in the American market by the war is not an inconsiderable one, and is large enough to present a serious problem to the textile and leather trades. Figures for 1913, the last complete year, as previously given, show the imports of foreign artificial dye stuffs to have been \$10,395,744, and it is this amount that American manufacturers must now supply.

"The United States must have dyes. These must be either imported or manufactured in this country, and since the war has paralyzed the trade of Germany, from whom we obtain by far the largest supply of imported dyes, only one cargo having reached our country since the beginning of hostilities, Yankee ingenuity must come to the rescue. The solution is all American dyes for American manufactured goods. We must establish a dye manufacturing industry in the United States which will supply not only the demands of the home market, but which will successfully compete with other nations for the dye trade of the world."

"In order to build up an American dye manufacturing industry that will supply all of the demands of the home market and compete successfully with foreign manufacturers for the dye trade of the world, proper support must be given the industry by both the Government and the consumers."

"The part that the Government must play in upbuilding the dye industry is an important one. The tariff on such dye stuffs must be placed on dyes to insure American manufacturers against the destructive competition for foreign combinations when the war is over. The coal-tar color industry in the United States makes no plea for protection in the ground of fostering an infant industry, but efficient protection should be given to prevent this country from being made the dumping ground for the overproduction of Germany. Unless this is done German manufacturers will be in a position to destroy the American coal-tar industry when the war is over, exactly as was done in the case of the hydrochloric industry.

"It must be remembered that even with chemists able to properly compound dyes, skill is necessary to their proper manufacture. The technical processes involved are exceedingly nice and considerable experience is necessary to perform the proper technique is acquired. In Germany for many years the industrial schools have been training young men to assume responsible positions in dye factories. In this country for a time some difficulty will likely be experienced in obtaining skilled labor. Foremost among American industrial schools to create the dye trade of the times is Pratt Institute in Brooklyn, N. Y. Under the direction of Dr. Allen Rodgers that institution has taken steps to install a miniature factory to manufacture all American dyes from all American raw materials and to train young men to become foremen in dye factories. It must be remembered that the dye industry, if greatly enlarged at all, will be placed on a permanent basis, and the importance of this experiment cannot be overestimated."

SHARP CURTAILMENT IN BUILDING OPERATION

In 20 cities in the 10 eastern States, there was a falling off of 39%; expressed in dollars, this was from \$27,000,000 last year to \$16,837,280 this year. A \$4,500,000 loss in Albany, N. Y., was accounted for by the change in the building laws; otherwise, losses were more or less proportionate. In New York City, building was surprising; Manhattan Borough nearly equalled last year; in Bronx, fully 100% larger than in September last year, and in Brooklyn, fully 50%. In the Bronx, building for the first nine months of the year was ahead of the corresponding period last year, and Brooklyn \$10,000,000 ahead. This is partially accounted for by developments in the opening of new subways, but it is remarkable, nevertheless. In Philadelphia, there is a loss of more than 50%, which is the first important loss in that city this year. For the first nine months of the year, the loss was approximately \$27,000,000, most of which is accounted for in the month of September. This makes a loss of approximately 11.5% compared with the corresponding month last year.

In 16 cities in the Middle West, the loss was not as pronounced, amounting to about \$5,000,000, or 23%. The most startling loss was in the City of Chicago, \$2,000,000, or 50%, \$500,000. Grand Rapids, \$1,000,000, but September, 1913, was above the average, and Minneapolis, \$600,000. It is interesting to note that in these cities for the first nine months of the year, there was a gain of approximately 4%.

In several Southern cities, the tightness of money is most evident, decreases being general in each case and amounting to 41% for September and 15% for the first nine months of the year.

Returns from Pacific Coast States have been meager, and the five cities heard from were perhaps not enough to form any adequate basis for comparison, but the loss in September amounted to 64%, comparing with 19% for the first nine months.

RAILWAYS

Maine—Eastern Maine R.R.—Preliminary surveys are being made by this company for the construction of a railway from Hordton to Bangor, Maine. B. W. Burpee is Ch. Engr.

New York—Lehigh Valley R.R.—The Traffic Bureau of Syracuse, N. Y., has petitioned this company to extend its line from either Weedsport or Auburn to Syracuse. E. B. Ashby, New York, is Ch. Engr.

North Carolina—Southern Ry.—A contract has been awarded by this company for the second track work on its line from Alexander to Craggy, N. C., about 10 miles, to the MORROW CONSTRUCTION CO., Greensboro, N. C. Noted Sept. 3.

Georgia—According to press reports the Louisville & Nashville R.R. is interested in the construction of a railway from Atlanta to Cartersville, Ga. Preliminary surveys are being made. A company is being incorporated, to be known as the North Georgia Mineral Co., for the purpose.

Alabama—Alabama Great Southern R.R.—This company has awarded a contract to J. C. ELKINS, Tallapoosa, Ala., for 11 miles of double-track work from Birmingham to Mobile Junction, Ala. C. Dougherty, Cincinnati, Ohio, is Ch. Engr.

Mississippi—Mobile & Ohio R.R.—At a recent meeting this company voted to issue bonds for double tracking its line from Corinth, Miss., to Jackson, Tenn., about 57 miles. B. A. Wood, Mobile, Ala., is Ch. Engr.

Louisiana—Orange & Northwestern R.R.—Preliminary arrangements are being made by this company for laying tracks on its proposed line through Vinton, La. J. S. Pyatt, Orange, Tex., is Mgr.

Kentucky—Louisville & Nashville R.R.—This company plans to award a contract soon for the construction of a three-mile line from Raymond to Jenkins, Ky. W. H. Courtenay, Louisville, Ky., is Ch. Engr.

Texas—Kansas City, Mexico & Orient R.R.—This company has voted to issue \$148,000 in bonds for the construction of its line from Grivin to Alpine, Tex. R. T. Parker, San Angelo, Tex., is Ch. Engr.

New Mexico—Atchison, Topeka & Santa Fe R.R.—Final surveys are being made by this company for the construction of a railway from Santa Fe to Santa N. M. P. M. Bisbee, Amarillo, Tex., is Ch. Engr., of Western lines.

Idaho—Oregon Short Line R.R.—Plans are being prepared by this company for the construction of a second track on its main line from Pocatello, Idaho to Blackfoot, Idaho. Carl Stetson, Salt Lake City, Utah, is Ch. Engr.

Freeport, Ill.—The citizens of Freeport have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Galesburg, Ill.—The citizens of Galesburg have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Junction City, Kan.—The citizens of Junction City have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

St. Louis, Mo.—The citizens of St. Louis have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

San Antonio, Tex.—The citizens of San Antonio have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Tulsa, Okla.—The citizens of Tulsa have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Wichita, Kan.—The citizens of Wichita have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Yonkers, N. Y.—The citizens of Yonkers have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Albany, N. Y.—The citizens of Albany have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Buffalo, N. Y.—The citizens of Buffalo have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Rochester, N. Y.—The citizens of Rochester have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Syracuse, N. Y.—The citizens of Syracuse have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Utica, N. Y.—The citizens of Utica have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Watkinsburg, Ga.—The citizens of Watkinsburg have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Waynesville, N. C.—The citizens of Waynesville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Winston-Salem, N. C.—The citizens of Winston-Salem have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Charlotte, N. C.—The citizens of Charlotte have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Asheville, N. C.—The citizens of Asheville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Greensboro, N. C.—The citizens of Greensboro have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

High Point, N. C.—The citizens of High Point have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Wilmington, N. C.—The citizens of Wilmington have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Fayetteville, N. C.—The citizens of Fayetteville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Rock Hill, S. C.—The citizens of Rock Hill have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Summerville, S. C.—The citizens of Summerville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Myrtle Beach, S. C.—The citizens of Myrtle Beach have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Charleston, S. C.—The citizens of Charleston have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Columbia, S. C.—The citizens of Columbia have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Richland, S. C.—The citizens of Richland have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Orangeburg, S. C.—The citizens of Orangeburg have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Goose Creek, S. C.—The citizens of Goose Creek have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

North Charleston, S. C.—The citizens of North Charleston have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Mount Pleasant, S. C.—The citizens of Mount Pleasant have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Summerville, S. C.—The citizens of Summerville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Myrtle Beach, S. C.—The citizens of Myrtle Beach have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Charleston, S. C.—The citizens of Charleston have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Columbia, S. C.—The citizens of Columbia have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Richland, S. C.—The citizens of Richland have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Orangeburg, S. C.—The citizens of Orangeburg have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Goose Creek, S. C.—The citizens of Goose Creek have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

North Charleston, S. C.—The citizens of North Charleston have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Mount Pleasant, S. C.—The citizens of Mount Pleasant have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Summerville, S. C.—The citizens of Summerville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Myrtle Beach, S. C.—The citizens of Myrtle Beach have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Charleston, S. C.—The citizens of Charleston have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Columbia, S. C.—The citizens of Columbia have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Branchville, S. C.—The citizens have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Westminster, S. C.—The citizens have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Mount Vernon, Ga.—The citizens have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Mobile, Ala.—The School Commission has awarded the contract for the installation of a fan plant system of combined heating and ventilating in Barton Academy, Russell School, Seale School and old Shell Road School, to the MONTGOMERY ELECTRIC CO., Atlanta, Ga. at \$12,500.

Jackson, Miss.—The city is considering the installation of a municipal electric-light and power plant to cost about \$200,000. M. L. Fuller is City Engineer.

Meridian, Miss.—The Tuberculosis Hospital Commission has awarded the contract for the construction of an electric-light and power plant for the hospital to the DALTON ELECTRIC CO., Birmingham, Ala.

Bristol, Ind.—It is reported that a franchise has been granted to A. H. Town, Constantine, Mich., for the installation of an electric-light plant in Bristol.

Portage, Wis.—It is reported that plans have been prepared for a municipal electric-light plant estimated to cost \$200,000. A. T. Matthey, 20 West Jackson Blvd., Chicago, Ill., is City Engineer.

Audubon, Iowa.—Press reports state that the Audubon Electric Light Plant, owned by N. L. Freeman, was recently destroyed by a cyclone.

Carroll, Iowa.—The Carroll Light & Heat Co. contemplates improvements to its power plant, distributing system and heating mains to cost about \$35,000. Fred C. Ross is Mgr.

Duluth, Minn.—The City Council has passed an ordinance appropriating \$85,000 for the construction of the first unit of a municipal electric-lighting plant, which will supply electricity to the territory between 33rd and 70th Aves. West. Noted Sept. 3.

Greensburg, Kan.—The municipal electric-light plant expects to put base within the next three months, a 200-hp. engine, a 125-kva. alternating current generator, three-phase, 2,500-volt, 50-cycles, and material for an 11-mile transmission line. J. W. Dennington is City Clerk.

Kearney, Neb.—The Kearney Water & Electric Power Co. has applied to the State Railway Commission for permission to issue \$300,000 in bonds for the purpose of which will be used to enlarge and improve the present plant.

Sidney, Mont.—The Sidney Light & Power Co. has been incorporated with Sidney as its headquarters. The company will soon begin the construction of an electric power plant to supply this city and neighboring towns.

Pasadena, Calif.—The Pasadena Hospital Association will begin the construction of a new 100-bed hospital. The estimated cost of the new building is \$1,000,000. The present hospital is located at Pasadena and St. Louis. The cost of the new building is \$1,000,000.

LIGHT, HEAT AND POWER

Ruth, N. Y.—The citizens of Ruth have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Albany, N. Y.—The citizens of Albany have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Buffalo, N. Y.—The citizens of Buffalo have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Rochester, N. Y.—The citizens of Rochester have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Syracuse, N. Y.—The citizens of Syracuse have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Utica, N. Y.—The citizens of Utica have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Watkinsburg, Ga.—The citizens of Watkinsburg have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Waynesville, N. C.—The citizens of Waynesville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Winston-Salem, N. C.—The citizens of Winston-Salem have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Charlotte, N. C.—The citizens of Charlotte have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Asheville, N. C.—The citizens of Asheville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Greensboro, N. C.—The citizens of Greensboro have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

High Point, N. C.—The citizens of High Point have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Wilmington, N. C.—The citizens of Wilmington have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Fayetteville, N. C.—The citizens of Fayetteville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Rock Hill, S. C.—The citizens of Rock Hill have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Summerville, S. C.—The citizens of Summerville have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Myrtle Beach, S. C.—The citizens of Myrtle Beach have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Charleston, S. C.—The citizens of Charleston have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Columbia, S. C.—The citizens of Columbia have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Branchville, S. C.—The citizens have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Westminster, S. C.—The citizens have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Mount Vernon, Ga.—The citizens have voted in favor of a municipal electric-light plant. The estimated cost of the plant is \$10,000.

Mobile, Ala.—The School Commission has awarded the contract for the installation of a fan plant system of combined heating and ventilating in Barton Academy, Russell School, Seale School and old Shell Road School, to the MONTGOMERY ELECTRIC CO., Atlanta, Ga. at \$12,500.

Jackson, Miss.—The city is considering the installation of a municipal electric-light and power plant to cost about \$200,000. M. L. Fuller is City Engineer.

Meridian, Miss.—The Tuberculosis Hospital Commission has awarded the contract for the construction of an electric-light and power plant for the hospital to the DALTON ELECTRIC CO., Birmingham, Ala.

Bristol, Ind.—It is reported that a franchise has been granted to A. H. Town, Constantine, Mich., for the installation of an electric-light plant in Bristol.

Portage, Wis.—It is reported that plans have been prepared for a municipal electric-light plant estimated to cost \$200,000. A. T. Matthey, 20 West Jackson Blvd., Chicago, Ill., is City Engineer.

Audubon, Iowa.—Press reports state that the Audubon Electric Light Plant, owned by N. L. Freeman, was recently destroyed by a cyclone.

Carroll, Iowa.—The Carroll Light & Heat Co. contemplates improvements to its power plant, distributing system and heating mains to cost about \$35,000. Fred C. Ross is Mgr.

Duluth, Minn.—The City Council has passed an ordinance appropriating \$85,000 for the construction of the first unit of a municipal electric-lighting plant, which will supply electricity to the territory between 33rd and 70th Aves. West. Noted Sept. 3.

Greensburg, Kan.—The municipal electric-light plant expects to put base within the next three months, a 200-hp. engine, a 125-kva. alternating current generator, three-phase, 2,500-volt, 50-cycles, and material for an 11-mile transmission line. J. W. Dennington is City Clerk.

Kearney, Neb.—The Kearney Water & Electric Power Co. has applied to the State Railway Commission for permission to issue \$300,000 in bonds for the purpose of which will be used to enlarge and improve the present plant.

Sidney, Mont.—The Sidney Light & Power Co. has been incorporated with Sidney as its headquarters. The company will soon begin the construction of an electric power plant to supply this city and neighboring towns.

Albany, Mont.—A special election will soon be held to vote on the question of granting a franchise to Henry Zolphi for the installation of an electric-light and heating plant. It is reported that Mr. Zolphi, if the franchise is granted, will build a plant costing from \$20,000 to \$25,000.

Brownsville, Tex.—James A. Browne, owner of the local street railway system, has announced that he will build a power plant and convert the transit system from gasoline motor to electricity.

Malad City, Idaho.—The Evans Light & Power Co., Malad City, is considering the construction of a new lighting plant to be located near the city. J. H. Campbell is Mgr. and Supt. of the company.

Spencer, Idaho.—The Wood Livestock Co. has been granted a franchise for the construction of a power plant and distributing system to supply the city with light and power. F. J. Higgenbotham is Pres. of the company.

Mesa, Ariz.—The South Side Gas & Electric Co. plans to build a plant costing about \$10,000, for the purpose of distributing the electricity which is generated at the power plant at the Roosevelt Dam. H. L. Chandler is Mgr. of the South Side Co.

Seattle, Wash.—The City Council in connection with the proposed extension of the municipal power plant, has received an offer from T. T. Mitchell to sell power rights on the South Park of the Skomish River for \$150,000. Mr. Mitchell claims that the site, which is located in Mason County, is capable of developing 7,000 hp. and that the cost of development would approximate \$100,000 or about \$2,000,000 less than the site at Lake Cushman, which is under consideration. Noted Sept. 24.

Fraserville, Que.—It is reported that bids will be asked in December or January for additions to the power house of the municipal lighting system, including penstock, waterwheel, dynamo and motors. The estimated cost is \$25,000. E. Tails is Ck.

RAILWAYS

♦**Connecticut**—New York, New Haven & Hartford R.R.—This company has awarded contract to **HOLBROOK CABOT & ROLLINS CORPORATION**, Boston, Mass., for constructing a new main line in New London, Conn., from Hallam St. to the terminal of the new bridge over the Thames River.

North Carolina—Cliffside R.R.—Surveys have been made by this company for the extension of its line from Cliffside to the Brand River. R. K. Haynes, Cliffside, N. C., is Pres. and W. H. Terrell is Ch. Engr.

Georgia—Swift Lumber Co.—The construction of a nine mile extension from Meigs, Ga., to Coolidge and Pavo, Ga., is contemplated by this company.

Iowa—Charles City Western Ry.—Plans are being made by this company to electrify and extend its 16-mile railway in Iowa. E. R. Erusberger, Charles City, Iowa, is Gen. Mgr.

Arkansas—Jonesboro, Lake City & Eastern R.R.—Plans are being prepared by this company for the construction of two extensions into the timber lands from Jonesboro, Ark.

Texas—Altus, Roswell & El Paso R.R.—This company has been organized for the purpose of constructing a railway from Memphis, Tex., to Roswell, N. M., about 291 miles. E. C. Noble, Lubbock, Tex., is Pres. and Gen. Mgr.

Oklahoma—The Oil Belt Terminal Co., Jennings, Okla., has been purchased by C. N. Haskell, Tulsa, Okla., and associates. The new owners plan the extension of the line from Jennings to Drumright and Cushing, Okla., about 21 miles.

♦**New Mexico**—Altus Roswell & El Paso R.R.—See item under Texas.

Oregon—The citizens of Douglas County, at an election to be held soon, will vote on the proposition to issue \$500,000 in bonds, the proceeds of which will be used for the construction of a railway from Roseburg, Ore., to Coos Bay tidewater.

California—Atchison, Topeka & Santa Fe R.R.—Preliminary arrangements are being made by this company for improving its tracks and roadbed from Richmond, Calif., to Stockton, Calif. P. M. Bishop, Amarillo, Tex., is Ch. Engr. Western Lines.

♦**Ontario**—Lake Huron & Northern Ontario—This company has awarded the contract for the extension of the railway, formerly the Bruce Mines & Algoma line, from Bruce Mines, Ont., north, to the **ONTARIO NORTHWESTERN CONSTRUCTION CO.** H. Appleton, Bruce Mines, Ont., is Vice-Pres. and Gen. Mgr.

ELECTRIC RAILWAYS

Washburn, Maine—Plans have been completed and surveys are being made by the Quebec Extension Ry. to begin construction in 1915 of its 100-mile line between Washburn and

Quebec. It will extend across the northern part of Maine to connect the existing lines at Quebec and New Brunswick, and across New Brunswick to the Quebec border.

Franklin, Mass.—The Milford, Attleboro & Woonsocket St. Ry. has applied to the City Council for a franchise to relocate its tracks in Central St.

Swarmscott, Mass.—The City Council has granted permission to the Bay State St. Ry. to double track its line on Humphrey St., from the Lynn line to Commonwealth Ave.

Danbury, Conn.—Plans of the Danbury & Bethel St. Ry. for the reconstruction of its track on White St., Danbury, and the construction of a turnout at that place have been approved by the Public Utilities Commission.

Burgettstown, Penn.—Plans are being considered by the West Penn Traction Co. for the extension of its Oakdale and McDonald branch to Burgettstown. W. E. Moore, First National Bank Bldg., Pittsburgh, is Vice-Pres. and Gen. Mgr.

Marietta, Penn.—The Conestoga Traction Co. plans to extend its lines from Marietta to Maytown, a distance of three miles.

Philadelphia, Penn.—The Philadelphia Rapid Transit Co. has been requested to consider plans for extending its line on 56th St.

Washington, D. C.—The House of Representatives has passed a Senate bill authorizing the Washington Ry. & Electric Ry. to extend its tracks from the point where its present tracks intersect Portland St., S. E., thence along Portland St. in a westerly direction to Fourth St., S. W.

Owensport, W. Va.—A company is being organized under the name of the West Virginia Electric Co. for the purpose of building a 50-mile electric railway from Owensport to West.

Durham, N. C.—Plans are being made to organize a company for the purpose of building a 12-mile electric line between Durham and Chapel Hill. C. G. Creighton, Durham, is interested.

Lula, Ga.—The Lula-Homer Ry. Co. has been recently organized for the purpose of building a 15-mile railway from Lula to Homer. The incorporators are: S. A. Carter, W. A. Rolins, B. E. Chapman, Joel Coffee and E. F. Whitworth, Lula; C. H. Chambers and E. A. Mize, Homer.

Gadsden, Ala.—Plans have been prepared and a preliminary survey has been made for the proposed electric railway from Gadsden to Centre through a section of Cherokee County. It is also planned to extend the line to East Gadsden which will require the construction of a bridge across the Coosa River.

Alexandria, La.—S. A. Guy and W. A. Sullivan, Shreveport, La., are interested in the construction of an electric railway in Alexandria.

Cleveland, Ohio—The Cleveland Ry. has been requested to consider plans for extending its Madison Ave. line from the present terminus at West 11th St. to the Rocky River in Cleveland.

Ypsilanti, Mich.—The Ypsilanti St. Ry. has requested the City Council to grant it a franchise to construct an electric belt line in Ypsilanti and to arrange to use the tracks of the Detroit, Jackson & Chicago Ry. on Michigan Ave., Washington, and West Coast Sts. Frederick H. Zeigen, Detroit, Mich., is Pres.

East Dubuque, Ill.—It is planned to organize a company for the purpose of building an electric railway to connect Plattville with Lancaster, the county seat of Grant County, the inland villages west and north, and also to connect with the Chicago, Milwaukee & St. Paul R.R. and the Chicago, Northwestern R.R. at Shullsburg, the Illinois Central R.R. at Apple River, Ill., the Chicago, Great Western R.R. at Stockton and the several lines at Preppert, where connections will be made with the Illinois Traction System, thus giving Grant County a direct route to Chicago.

Los Angeles, Calif.—The City Council has granted a franchise for a period of 21 years to the Electric Ry. Co. to construct and operate an electric railway in sections of Sixth St. and Central Ave. J. McMillan, Los Angeles, is Gen. Mgr.

Redlands, Calif.—Plans are under consideration for building an electric railway from Redlands Junction to Yucaipa via Redlands. G. S. Higgin and E. A. Warner are interested.

San Francisco, Calif.—The North Beach Promotion Association has requested the Board of Supervisors to authorize the San Francisco Ry. to extend its line down Stockton St. to the Embarcadero.

Stockton, Calif.—The City Council has been requested by the Tidewater Southern Ry. to grant it a franchise for the purpose of extending its tracks in Stockton to connect its warehouses, manufactories and other industries and enterprises within its line of railway and for the purpose of connecting its line with the tracks of other railroad companies in Stockton.

St. John, N. H.—The St. John Ry. has been requested to consider plans for extending its lines through Simonds, St. John County.

Texas—Plans for the construction of a three-story factory, Archts. A. & M., are being prepared for the Detroit Chemistry Co. Grand River and Van Ave., Detroit, are awarded to MAX BARTHOLOMEW 144 Warren Ave., East Detroit. Estimated cost, \$100,000.

Pontiac, Mich.—The general contract for the construction of the factory which will be used for the manufacture of dynamite has been awarded to HERTY BROS.

Winooski, Vt.—The contract for the construction of the brick factory for the Winooski Portland Cement Co. has been awarded to the R. H. BELL ENGINEERING & CONSTRUCTION CO., 100 S. Main St., Winooski.

Chicago, Ill.—Messrs. F. H. & F. H. Archts., 177 South Michigan Ave., are preparing plans for the construction of a one-story garage, 200 ft. long by 100 ft. wide, at Chicago, Ill., 1184 East 17th St. The estimated cost is \$100,000.

Fla.—H. B. & C. Co. are erecting a plant at 70 ft. by 100 ft. at 400 ft. on W. 1st St., Miami, Fla. The estimated cost is \$100,000.

Winnipeg, Wis.—The Harley, Day & Co. Machine Co. are erecting a plant for the construction of a factory addition on 11th St. The estimated cost is \$100,000.

St. Louis, Mo.—The contract for the construction of a three-story brick and steel factory for the transfer of the estimated cost is \$100,000.

St. Louis, Mo.—The contract for the construction of a three-story brick and steel factory for the transfer of the estimated cost is \$100,000.

St. Louis, Mo.—The contract for the construction of a three-story brick and steel factory for the transfer of the estimated cost is \$100,000.

St. Louis, Mo.—The contract for the construction of a three-story brick and steel factory for the transfer of the estimated cost is \$100,000.

St. Louis, Mo.—The contract for the construction of a three-story brick and steel factory for the transfer of the estimated cost is \$100,000.

St. Louis, Mo.—The contract for the construction of a three-story brick and steel factory for the transfer of the estimated cost is \$100,000.

St. Louis, Mo.—The contract for the construction of a three-story brick and steel factory for the transfer of the estimated cost is \$100,000.

Agnew, Calif.—The Pacific Chemical Co., Berkeley, Calif., is erecting a factory at Agnew, Calif., for a group of factory buildings at Agnew, estimated to cost \$60,000.

Alameda, Calif.—The contract for the construction of an ice plant has been awarded to F. L. SOMERS, for the La Verne Orange Growers' Association. Estimated cost, \$50,000.

FEDERAL GOVERNMENT WORK

The following allotments have been made from the river and harbor act of Oct. 2, 1914, appropriating \$20,000,000 for preservation, construction, and existing river and harbor works, and for the prosecution of projects heretofore authorized.

Portland Harbor, Maine, \$15,000. Isles of Shoals Harbor, Maine, \$500. Salem Harbor, Mass., \$7500. Boston Harbor, Mass., \$200,000. Stonington Harbor, Conn., \$6000. New Haven Harbor, Conn., \$8,000. Housatonic River, Conn., \$1000; Thames River, Conn., \$5000.

Port Chester Harbor, N. Y., \$10,000. Mamaroneck Harbor, N. Y., \$3000. Gowanus Bay, N. Y., \$147,000. Bay Ridge and Red Hook Channels, \$150,000. Hudson River Channel, New York Harbor, \$125,000. Charlotte Harbor, N. Y., \$21,000. East Chester Creek, N. Y., \$20,000. West Chester Creek, N. Y., \$135,500. Harlem River, N. Y., \$50,000. Hudson River, N. Y., \$750,000. Staten Island Sound, N. Y., and N. J., \$400,000. Raritan Bay, N. J., \$20,000. Newark Bay and Passaic Bay, N. J., \$150,000; Woodbridge Creek, N. J., \$10,000. K. Sport Harbor, Matawan Creek, Raritan, South, and Elizabeth Rivers, Shal Harbor and Compton Creek, and Chesapeake Creek, N. J., \$8000. Shrewsbury River, N. J., \$10,000. Abasco Inlet, N. J., \$25,000.

Delaware River below Philadelphia, \$135,000. \$1,000,000; Wilmington Harbor, Del., \$30,000. Pittsburgh Harbor, Penn., \$2500; Waterway from Chimotague Bay, Va., to Delaware Bay, Del., \$1000.

Potomac River at Washington, D. C., \$10,000; Mattaponi and Pamunkey Rivers, Va., \$100,000. Rappahannock River, Va., \$5000. Beaufort Harbor, N. C., \$5000. Beaufort Inlet, N. C., \$10,000. Fishing Creek, N. C., \$1000. Pamlico and Tar Rivers, N. C., \$18,500. Bay River, N. C., \$1000. Contentnea Creek, N. C., \$5000. Roanoke River below Roanoke Rapids, N. C., \$1500; Waterway from Pamlico Sound to Beaufort Inlet, N. C., \$24,000; New River, N. C., including inland waterways between Beaufort Harbor and New River and between New River and Swanton, N. C., \$100,000. Roanoke River, N. C., \$100,000. Wilmington River, N. C., \$10,500. Cape Fear River above Wilmington, N. C., locks and dams, \$70,000; Cape Fear River at and below Wilmington, N. C., \$115,000; Charleston Harbor, S. C., \$100,000. Savannah River, S. C., \$100,000. Great Pee Dee River, S. C., \$10,000. Santee, Wateree and Congaree Rivers, S. C., \$30,000.

Savannah Harbor, Ga., \$150,000. Brunswick Harbor, Ga., \$100,000. Savannah River below Augusta, Ga., \$100,000. Flint River, Ga., \$10,000. Chattahoochee River below Columbus, Ga., \$65,000; Coosa River, Ga., and Ala. Lock in dam No. 1 and dam No. 3, \$100,000; lock and dam at Mayes Bar, near Rome, Ga., \$10,000; Apalachicola Bay, Fla., \$15,000. St. Andrews Bay, Fla., \$25,000; Narrows in Santa Rosa Sound, Fla., \$5000. St. Johns River, Fla., Jacksonville to the ocean, \$200,000. Jacksonville to the ocean, \$100,000. St. Johns River, Fla., \$10,000. Apalachicola River, Fla., \$2000; Withlacoochee River, Fla., \$10,000. Apalachicola River, Fla., including cutoff, Lee Slough, lower Chipola River, and upper Chipola River, \$100,000. Miami River, Fla., \$10,000. St. Johns River, Fla., \$10,000. Tampa Bay, Fla., \$12,000. Channel from Apalachicola River to St. Andrews Bay, Fla., \$65,000. Choctawhatchee River, Fla., and Ala., \$20,000. Escambia and Conecuh Rivers, Fla., and Ala., \$10,000. Moving the water hyacinth in Fla., Mex. Tex., and Tex., \$17,000.

Mobile Harbor, Ala., \$62,500. Mobile Bay, Ala., \$10,000; Alabama River, Ala., including Coosa River up to Wetumpka, \$100,000. Alabama River, Ala., \$10,000. Wetumpka River, Ala., \$10,000. Demopolis, Ala., to Walkers Bridge, Miss., \$5000; Gulfport Harbor and Ship Island Pass, Miss., \$20,000; Pascagoula, La., and Chickasaw Rivers, Miss., \$4000. Yarrow River and tributaries, Miss., including Yarrow, Tallahatche, Big Sunflower, and Oldwater Rivers, Tallahatche River above the mouth of Oldwater River, Tchula Lake, Steele and Washington Rivers, Lake Washington, and Bear Creek, \$20,000; Big Sunflower River, Miss., lock and dam, \$10,000. South Pass, Mississippi River, \$100,000. Bayou Teche, La., \$20,000. Bayou Verdon and Mergentau River, La., and tributaries including Bayou Plaquemine, Iberville, \$12,000. Bayou Terrebonne, La., \$25,000. Atchafalaya River below Morgan City, La., \$10,000; Bayou du Large, \$10,000.

Galveston Harbor, Tex., \$25,000. Channel from Galveston Harbor to Texas City, Tex., \$25,000. Port Bolivar Channel, Tex., \$10,000. Port Aransas, Tex., \$10,000. Sabine Pass, Tex., \$10,000. Houston Ship Channel, Tex., \$10,000. Aransas Channel, mouth of Trinity River, Chester Creek, and Cedar, Choctawhatchee, Tumble Bayou, 10 Kinross Double, and East Bay Narrows, Tex., \$20,000. Inland waterway on coast of Texas, West Galveston Bay, \$10,000. Aransas Pass, Pass Cavallo section, \$25,000. Galveston Bay, including bay section and river up to Victoria, Tex., \$15,000. Brazos River at the mouth, Tex., \$20,000. Colorado River, Tex., \$10,000. Rio Grande, \$10,000. Old Washington to Waco, \$200,000. Channel from Aransas Pass to Corpus Christi, Tex., \$10,000. Trinity River, Tex., open channel work, \$15,000. locks and dams, \$143,000. Cypress Bayou, Tex., and Tex., \$12,000.

Red River above Fulton, Ark., \$15,000. Red River below Fulton, Ark., \$10,000. Ouachita River, Ark., and La.; open channel work, \$20,000. Lake and dams, \$200,000. Arkansas River, Ark., and La., \$10,000. Red River, Ark., \$10,000. Arkansas River, Ark., \$10,000. Black and Current Rivers, Ark., and Mo., \$10,000. St. Francis and L'Anguille Rivers and Blackfish Bayou, Ark., \$1000.

Tennessee River, Between Florence and Riverston, Ala., \$10,000. below Riverston, Ala., \$10,000. Cumberland River, below Nashville, Tenn., \$20,000. Toledo Harbor, Ohio, \$125,000. Port Clinton Harbor, Ohio, \$500. Huron Harbor, Ohio, \$10,000. Vermilion Harbor, Ohio, \$1000. Cleveland Harbor, Ohio, \$15,000. Cuyahoga Harbor, Ohio, \$125,000.

Ohio River: Open-channel work, \$19,000; locks and dams, \$1,750,000; Ontonagon Harbor, Mich., \$10,000; St. Joseph Harbor, Mich., \$2000; South Haven Harbor, Mich., \$4500; Muskegon Harbor, Mich., \$4500; Ludington Harbor, Mich., \$6000; Frankfort Harbor, Mich., \$1000; Charlevoix Harbor, Mich., \$2000; waterway across Keweenaw Point, Mich., harbor of refuge, \$75,000; Ashland Harbor, Wis., \$10,000; Racine Harbor, Wis., \$3000; Fox River, Wis., \$10,000; Waukegan Harbor, Ill., \$2000; Zippel Bay, Lake Erie, the Woods, Minn., \$1000; Agate Bay, Minn., \$5000; Chicago River, Ill., \$10,000; Calumet River, Ill., \$10,000; Michigan City Harbor, Ind., \$50,000.

Mississippi River: Work of passes to Ohio River (work of Mississippi River Commission), \$3,750,000; Ohio River to Missouri River, \$250,000; Missouri River to Minneapolis, Minn., \$800,000; St. Paul to Minneapolis, Minn., \$150,000; Brainerd to Grand Rapids, Minn., \$4000; Missouri River, Kansas City to the mouth, \$850,000; Kansas City to Sioux City, \$50,000; Sioux City to Fort Benton, \$50,000; Gasconade River, Mo., \$15,000.

Los Angeles Harbor, Calif., \$12,000; Oakland Harbor, Calif., \$35,000; Humboldt Harbor and Bay, Calif., \$200,000; Sacramento and Feather Rivers, Calif., work of the California Debris Commission), \$60,000; Coos Bay, Ore., \$70,000; Coquille River, Ore., \$26,000; Siuslaw River, Ore., \$5000; Snake River, Ore., Wash., and Idaho, \$5000; Columbia River and tributaries above Celilo Falls to the mouth of Snake River, Ore., and Wash., \$10,000; Columbia River, between the foot of the Dalles Rapids and the head of Celilo Falls, Ore., and Wash., \$225,000; Willamette and Yamhill Rivers above Portland, Ore., \$25,000; Columbia and Willamette Rivers below Portland, Ore., \$200,000; Columbia River at the mouth, Ore., and Wash., \$1,000,000; Grays Harbor and Chehalis River, Wash., \$15,000; Grays Harbor and Bar Wash., \$110,000; Columbia River, Portland and Kelleys Falls, Wash., \$35,000; Cowlitz and Lewis Rivers, Wash., \$6000.

Reserved for contingencies, \$995,220.

Elevators—Bangor, Maine—Bids will be received by Oscar T. Wenderoth, Superv. Arch., Washington, D. C., until 3 p. m., Nov. 9, for delving an electric passenger elevator and a hydraulic freight lift in the U. S. post office at Bangor.

Concrete Coal Pocket—Port Williams (Cape Cottage post office), Maine—The contract for the construction of a concrete coal pocket at Port Williams has been awarded to the SANDERS CONTRACTING CO., Portland, Maine, at \$253. Noted Sept. 24.

Storehouse—Portsmouth, N. H.—The Quartermaster-General has directed the Constructing Quartermaster at Port Portsmouth, N. H., to prepare plans and call for bids for the construction of a storehouse at Portsmouth.

Headstones—Boston, Mass.—Bids were received by Lieut.-Col. W. S. Wood, Depot Quartermaster, for furnishing 12,000 white marble headstones from W. H. Gross & W. H. Deely, Lee, Mass., at \$2.15 per stone, and the Vermont Marble Co., Portland, Vt., at \$2.50 per stone. Noted Sept. 24.

Dredging Plant for Hire—Boston, Mass.—(Official)—Bids will be received by Lieut.-Col. W. E. Craighill, U. S. Engineers' Office, Boston, until noon, Oct. 30, for hire of dredging plant in Boston Harbor.

Shipbuilding Cranes—Boston, Mass.—The following are the bids received by H. E. Stanford, Chief, Bureau of Yards and Docks, for constructing shipbuilding cranes at the U. S. Navy Yards, Boston, and Philadelphia, Penn.: (a) For four cranes delivered f.o.b. cars, U. S. Navy Yard, Boston, Mass., \$100,000; (b) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (c) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (d) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (e) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (f) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (g) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (h) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (i) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (j) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (k) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (l) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (m) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (n) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (o) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (p) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (q) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (r) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (s) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (t) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (u) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (v) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (w) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (x) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (y) delivered f.o.b. cars, Philadelphia, Pa., \$100,000; (z) delivered f.o.b. cars, Philadelphia, Pa., \$100,000.

Mezzanine Floor—Worcester, Mass.—The following bids were received by the Custodian of U. S. post office, Worcester, for constructing a mezzanine floor in the post office: E. J. Cross Co., 82 Foster St., Worcester, \$10,742; James Mills & Sons Co., 4 Walnut St., Worcester, \$28,877; C. W. Humphreys & Sons, 100 State St., Worcester, \$12,142; J. W. Blinn, 100 State St., Worcester, \$5543; Norcross Bros. Co., Worcester, \$9761; Ernest Whitehead, 10 Norwich St., Worcester, \$10,040; Central Building Co., Worcester, Mass., \$10,300.

Decrease in Immigration—Figures of the Department of Labor show that since July 1, 1914, there has been a decided decrease in the influx of foreigners to this country. There were 34,637 entering in July, compared with 87,658 of the same month last year. In August there has been a further reduction of about 20,000, and September arrivals will probably be even less.

The New Haven Reduces Its Guard—It is the intention of the New Haven R.R. to reduce the number of its board of directors from 27 to 17. Four men, William Rockefeller, George F. Baker, Charles F. Brooker and J. S. Elton, have already resigned from the board of directors. The reason for their resignations has not been disclosed.

Extended totals	\$11,731	\$33,335	\$10,472	\$16,600

MUNICIPAL BOND SALES FALL OFF

on sales of municipal bonds in September aggregated \$146,000, according to the "Financial Chronicle." This does not include the \$100,000 of the first term financing. It is probable, however, that the most unfavorable month for the city in recent years, as for example, with \$124,974.00 in the same month last year, is not far from the record. The output of the city's bonds in September of 1914 was \$281,000.00. This is the largest ever reported for the first nine months of the year, comparing, as it does, with \$286,000.00 for the same period in 1913. The "Financial Chronicle" also reports that the output of permanent municipal bonds issued for the month of September

	Month of September	First Nine Months of the year
1914	\$4,850,400	\$21,025,960
1915	1,974,251	\$20,541,620
1916	5,469,641	317,912,921
1917	26,487,280	314,501,570
1918	11,364,021	221,051,042
1919	29,001,771	272,189,451
1920	14,511,814	234,231,117
1921	4,947,677	199,122,964
1922	8,860,418	153,152,145
1923	9,835,200	141,031,737
1924	10,694,671	177,931,657
1925	8,762,079	111,745,993
1926	9,759,654	117,478,855
1927	14,408,056	98,221,001
1928	4,033,899	97,191,161
1929	7,201,593	95,026,437

Construction News

*Denotes work advertised in ENGINEERING NEWS.

†Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

RAILWAYS

Pennsylvania—The City Council of Philadelphia has authorized this company to elevate its tracks on East Lehigh Ave., from Trenton Ave. to Richmond St., and on Richmond St. to Cumberland St. Estimated cost, \$500,000. A. C. Shand, Philadelphia, is Ch. Engr. See item under Miscellaneous.

District of Columbia—Norfolk & Washington R.R.—See item under Virginia.

Virginia—Norfolk, Yorktown & Washington R.R.—Surveys are being made by this company for the construction of its proposed railway to connect Norfolk, Newport News, Hampton, Yorktown and Alexandria, Va., and Washington, D. C. W. H. Edwards, Newport News, is interested.

West Virginia—Cherry River Southern R.R.—Arrangements are being made by this company to award contracts soon for the construction of its proposed railway to connect Curtin and Bays, W. Va.

North Carolina—Kinston-Carolina R.R. & Lumber Co.—Plans are being prepared by this company for the extension of its line from Kinston to Pink Hill, N. C., about 20 miles.

South Carolina—Savannah Western R.R.—The citizens of Manning, S. C., have voted to issue bonds for \$100,000 to aid this company in constructing its proposed railway through Manning. C. H. Milligan, Charleston, S. C., is interested. Noted Oct. 1.

North Dakota—Northern Pacific Ry.—Plans are being prepared by this company for the extension of its Canadian branch to Fort Yates, N. D. W. L. Darling, St. Paul, Minn., is Ch. Engr.

†**Texas**—Van Horn Valley Land & Ry. Co.—This company has awarded a contract to KING & RUNQUIST, Duluth, Minn., for the construction of a railway from Van Horn, Tex., to the New Mexico boundary.

†**Texas**—Galveston, Harrisburg & San Antonio R.R.—This company plans to reconstruct its lines from San Antonio, Tex., to El Paso, Tex., about 600 miles. I. A. Cottingham, Houston, Tex., is Asst. Gen. Mgr.

†**Washington**—Northern Pacific Ry.—This company has awarded a contract to W. J. HOY & CO., St. Paul, for grade separation work in Spokane, Wash.

ELECTRIC RAILWAYS

†**Boston, Mass.**—The Boston Elevated Ry. Co. plans to extend its line from Summer St. to the Commonwealth fish pier and Atlantic Ave. Edward Maher, Boston, is Pur. Agt.

†**Fitchburg, Mass.**—The Fitchburg & Leominster St. Ry. Co. plans the extension of its line in Fitchburg to the Fair Grounds. W. W. Sargent, Fitchburg, is Pres. and Gen. Mgr.

†**Tuckahoe, N. Y.**—According to press reports, plans are being prepared by the Westchester Electric R.R. Co. for the extension of its Mount Vernon-North Pelham line from North Pelham to the New York Central & Hudson River R.R. station in Tuckahoe. William B. Wheeler, Mount Vernon, is Supt.

†**New Castle, Penn.**—The New Castle Electric St. Ry. Co. will extend its lines in New Castle for a distance of about five miles. G. F. Ravenel is Secy.

†**Phoenixville, Penn.**—Arrangements are being made by the Perkiomen Electric Transit Co. for the construction of a trackless trolley system from Phoenixville to Emaus, about 40 miles. James L. Wolcott, Dover, Del., is interested.

†**Princeton, W. Va.**—The Princeton Power Co. has awarded the contract for the construction of an electric railway from Princeton to Bluefield, about 12 miles, to WALTON & CO., Falls Mills, Va.

†**Decatur, Ala.**—Humphrey Road, Florence, Ala., is interested in the construction of an electric railway to connect Decatur, Huntsville, and Athens and Florence.

†**New Orleans, La.**—Plans are being considered by the New Orleans Ry. & Light Co. for the construction of an electric railway in the Seventh Ward in New Orleans. M. S. Sloan, New Orleans, is Gen. Mgr.

†**Nashville, Tenn.**—Plans are being considered by the Nashville Ry. Co. for the extension of its Fifth Ave. line in Nashville. A. E. Beazley, Nashville, is Pur. Agt.

†**Detroit, Mich.**—Plans are being prepared by the Detroit United Ry. Co. for the extension of its Kercheval line to Connor's Creek Ave. in Detroit. F. W. Brooks, Detroit, is Gen. Mgr.

†**Holland, Mich.**—It is reported that the Chicago-Michigan Ry. Co. will construct an electric railway from Holland to Allegan.

†**Bloomington, Ill.**—The Bloomington & Normal St. Ry. Co. contemplates the reconstruction of its line on Clinton St. in Bloomington. M. G. Linn, Bloomington, is Gen. Supt.

†**Waukegan, Ill.**—The Waukegan, Fox Lake & Western Ry. Co. is preparing to double track its line on Washington St. in Waukegan. Edward J. Block, Highwood, Ill., is Gen. Supt.

†**Eau Claire, Wis.**—The Wisconsin-Minnesota Light & Power Co. will soon award contracts for the extension of its line to Mount Tom.

†**Des Moines, Iowa**—Extensive Improvements are planned by the Des Moines City Ry. Co. on its Center St. line. F. M. Harris, Des Moines, is Treas. and Pur. Agt.

†**Aurora, Minn.**—The Mesaba Ry. Co. is preparing plans for the extension of its line to Aurora. Work will not be started

before the spring. H. S. Newton, Virginia, Minn., is Gen. Mgr.

†**St. Peter, Minn.**—Plans are being considered by the Electric Short Line Ry. Co. for the construction of an electric railway in St. Peter. DeKoven Hunter, Minneapolis, is Gen. Mgr.

†**St. Louis, Mo.**—The United Rys. Co. plans the construction of an electric railway from Wellston to Lindenwood. Robert McCulloch, St. Louis, is Pres. Gen. Mgr. and Pur. Agt.

†**Brenham, Tex.**—W. W. Umbenhause & Co., Philadelphia, Penn., is interested in the construction of a system of inter-urban electric railways from Brenham to towns in the vicinity.

†**Houston, Tex.**—The Houston Electric Ry. Co. contemplates double tracking its line on Fannin and Travis St., in Houston. David Daly, Houston, is Local Mgr.

†**Lewiston, Idaho**—Plans are being prepared by R. C. Dahlheim and associates for the construction of an electric railway in Lewiston. Noted Oct. 22.

†**Pocatello, Idaho**—Preliminary arrangements are being made by the Pocatello Traction Co. for the construction of an electric railway in Pocatello. J. D. Browning is interested. Noted May 7.

†**Snohomish, Wash.**—The City Council has granted a franchise to the Puget Sound Electric Ry. Co. to extend its line on Main St. in Snohomish. L. H. Bean, Tacoma, is Local Mgr.

†**Los Angeles, Calif.**—The Los Angeles Ry. Corporation has applied to the City Council for a franchise to construct a double-track extension of its line on East First St. C. A. Henderson, Los Angeles, is Asst. Gen. Mgr. and Pur. Agt.

†**San Lorenz, Calif.**—The City Council has granted a franchise to the San Francisco-Oakland Terminal Ry. Co. to extend its line in San Lorenz. A. W. McLimont, Oakland, is Gen. Mgr.

LIGHT, HEAT AND POWER

†**Greensboro, Vt.**—The Greensboro Electric Co. will shortly call for bids for the construction of a hydro-electric plant. M. L. Saunders, White River Junction, Vt., is Engr.-in-Charge.

†**Rutland, Vt.**—F. L. Austin, 240 College St., Burlington, Vt., is preparing plans for an addition to the power house of the House of Correction, Rutland. The building will be of brick one story, 28x32 ft. J. E. Weeks, Rutland, is Chn. of the Com. in Charge.

†**Southbridge, Mass.**—The Webster & Southbridge Gas & Electric Co. will install a new switchboard, to cost about \$4000, in its Southbridge plant. H. S. Shaw, Webster, Mass., is Treas. and Mgr.

†**New Haven, Conn.**—The United Illuminating Co., New Haven and Bridgeport, Conn., has increased its capital stock by \$500,000 for the purpose of making improvements in the New Haven plant. R. A. Manwaring, New Haven, is Mgr.

Santa Barbara, Calif.—A contract for improving the Valerio and Hollister St. section of the main sewer has been awarded to F. R. RITCHIE CO., San Francisco, at approximately \$90,000.

Santa Rosa, Calif.—Bids will soon be received by the City Council for constructing 14,400 ft. of sewers.

GARBAGE

Buffalo, N. Y.—The city is having plans prepared for a garbage and refuse disposal plant to be erected at the foot of Massachusetts Ave. The estimated cost is \$100,000. Howard L. Rees is in charge. Ward & Co., Ward, N. Y., are Engrs.

Philadelphia, Penn.—The only bid received for the 1915 contract for garbage removal was that of the Penn Reduction Co., at \$323,588. Bids will be received until Nov. 6 by the Director, Department of Public Works, for (Schedule A) cleaning of streets, roads, alleys, inlets and markets for the year 1915 and all work incidental thereto; (Schedule B)—collection and disposal of ashes and rubbish for the year 1915 and all work incidental thereto.

STREETS AND ROADS

Boston, Mass.—Bids will be received by the Public Works Department, until Oct. 31, for paving and roadways on Castlegate Rd., Dorchester, and Lockwood St., Hyde Park District. L. K. Rourke is Comr.

Bids will be received until Nov. 3, by the State Highway Commission, for the construction of 1,300 lin. ft. of road in Williamsburg and 9000 lin. ft. in Montague. Arthur W. Dean, 15 Ashburton Pl., is Ch. Engr.

✦ The contract for building 8600 lin. ft. of state road in Sherburne has been awarded by the State Highway Commission to B. PERINI & CO., Ashland, at \$7580. Other bids were: O. W. Benedict, Pittsfield, \$7753; H. I. Geer, \$7777; Lindholm & Cobb, \$8652; S. W. Menaulque & Co., \$8656; Columbus Contracting Co., Pittsfield, \$92,600; J. J. Cummings, \$92,600; Chesire, \$9756; E. J. Rourke, \$9878; Way & Cellilli, \$10,002; Herne-Lowe Contracting Co., Milbury, \$10,411; Robinson & Co., Westfield, \$10,525; New England Construction Co., Worcester, \$10,600; J. J. Schindler, \$10,747; J. J. Conner, \$11,259; Lane Construction Co., Meriden, Conn., \$11,437; Hyde, Crowe & Walsh, \$11,677; John de Michiel, Torrington, Conn., \$11,835.

Hartford, Conn.—Bids were received by the State Highway Commission, Oct. 21, for the following road work in Preston Township—About 4900 lin. ft. (a) native stone macadam, (b) gravel, on the Norwich-Westerly Turnpike. Estimated quantities: 4800 cu. yd. earth grading, 150 cu. yd. borrowed embankment, 325 cu. yd. rock excavation, 40 cu. yd. wet excavation, 5760 sq. yd. 7-in. macadam and 2000 sq. yd. 4-in. macadam, or 7760 sq. yd. 8-in. gravel surface, 530 tons trap rock screenings, 140 cu. yd. native stones in piles, 2000 sq. yd. telford base, 10 cu. yd. 19 cu. yd. telford base, 10 cu. yd. second-class concrete, 635 lb. steel beams and reinforcement, 100 cu. yd. new masonry, 70 cu. yd. new dry rubble masonry, 30 cu. yd. old masonry torn down and relaid, 50 sq. yd. pointing old masonry, 100 sq. yd. new dry rubble masonry, 100 sq. yd. iron pipe culverts, one standard catch basin, 100 sq. yd. cobble gutter, 1000 lin. ft. rubble drain, 1930 lin. ft. removing and replacing stone walls and fences, 100 lin. ft. new stone wall, 100 lin. ft. new wire fence, 50 sq. yd. telford base, 10 sq. yd. fill, 50 cu. yd. crushed stone fill, 3880 gal. of liquid asphalt or asphaltic flush coat in place and covered—Ahern Construction Co., Williamam, Conn., (a) \$15,047, (b) \$13,466; Olin T. Benedict, Pittsfield, Mass., (a) \$14,691, (b) \$12,779; Bristow Bros.,

& Knowles Corporation, Narragansett Pier, R. I., (a) \$13,344; Frank A. Wilcox, Norwich, Conn., (a) \$13,675, (b) \$10,851; A. Brazos & Sons, Middletown, Conn., (a) \$14,448, (b) \$10,987; A. Vito Construction Corporation, Thompson, Conn., (a) \$13,729; Goodhue & Co., Litchfield, Conn., (a) \$13,673; A. D. Bridge's Sons, Inc., Hazardville, Conn., (a) \$12,311.

Sterling Township—About 4580 lin. ft. (a) native stone macadam, (b) gravel, on the Plainfield Road. Estimated quantities: 2800 cu. yd. earth grading, 50 cu. yd. borrowed embankment, 620 cu. yd. rock excavation, 70 cu. yd. wet excavation, 8025 sq. yd. 7-in. macadam and 500 sq. yd. 4-in. macadam, or 525 sq. yd. gravel surfacing, 635 tons trap rock screenings, 150 cu. yd. native stones in piles, 2000 sq. yd. telford base, 10 cu. yd. 19 cu. yd. telford base, 10 cu. yd. second-class concrete, 15 cu. yd. first-class concrete, 10 cu. yd. second-class concrete, 1300 lb. steel beams and reinforcement, 50 cu. yd. new masonry, 10 cu. yd. new dry rubble masonry, 100 sq. yd. old masonry torn down and relaid, 50 sq. yd. pointing old masonry, 25 lin. ft. gas pipe railing, 260 lin. ft. corrugated iron pipe culvert, 1000 lin. ft. relaying old pipe, 1 standard catch basins, 100 sq. yd. cobble gutters, 400 lin. ft. rubble drain, 150 lin. ft. removing and replacing stone walls or fences, 100 lin. ft. new stone wall, 100 lin. ft. new wire fence, 10 sq. yd. telford base, 100 cu. yd. sand or gravel fill, 100 cu. yd. crushed stone fill—A. D. Bridge's Sons, Inc., Hazardville, Conn., (a) \$981, (b) \$8619; Goodman & Trumbull Co., Litchfield, Conn., (a) \$11,786; A. Vito Construction Corporation, Thompson, Conn., (a) \$12,833; Joseph McCormack, East Providence, R. I., (a) \$13,242, (b) \$11,232; Ahern Construction Corporation, Williamam, Conn., (a) \$12,911, (b) \$12,911; Olin T. Benedict, Pittsfield, Mass., (a) \$12,716, (b) \$9987; John de Michiel & Bro., Torrington, Conn., (a) \$13,164, (b) \$9510; Bristow Bros. & Knowles Corporation, Narragansett Pier, R. I., (a) \$12,719.

Covey Township—About 4000 lin. ft. native stone macadam on the South Covey Road. Estimated quantities: 590 cu. yd. earth grading, 3180 cu. yd. borrowed embankment, 25 cu. yd. rock excavation, 5855 sq. yd. 7-in. macadam and 2500 sq. yd. 4-in. macadam, or 4800 sq. yd. gravel surfacing, 155 cu. yd. native stone in piles, 2500 sq. yd. telford base, 41 sq. yd. gal. liquid asphalt or asphaltic flush coat in place and covered, 10 cu. yd. second-class concrete, 10 cu. yd. new masonry, 10 cu. yd. new rubble masonry, 100 sq. yd. old masonry torn down and relaid, 50 sq. yd. pointing old masonry, 200 lin. ft. corrugated iron pipe culvert, one standard catch basin, 100 sq. yd. cobble gutter, 1000 lin. ft. rubble drain, 100 lin. ft. removing and replacing stone walls or fences, 100 lin. ft. new stone wall, 100 lin. ft. new wire fence, 50 cu. yd. sand or gravel fill, 100 cu. yd. crushed stone fill—A. D. Bridge's Sons, Inc., Hazardville, Conn., \$11,566; Goodman & Trumbull Co., Litchfield, Conn., \$12,476; Ahern Construction Co., Williamam, Conn., \$13,086; A. B. Cadwell, New Britain, Conn., \$13,086; Olin T. Benedict, Pittsfield, Mass., \$12,627; Bristow Bros. & Knowles Corporation, Narragansett Pier, R. I., \$12,204; A. Brazos & Sons, Middletown, Conn., \$13,155.

Danbury Township—11,775 lin. ft. * Awarded two contracts jointly.

† Trackage rights also to New York Municipal Railway Corporation.

† Alliance, Ohio.—The contract for the construction of a two-story and basement City Hall building, 90x120 ft., has been awarded to GEORGE B. McMILLAN CO., 1749 East 55th St., Cleveland. Estimated cost, \$75,000.

Cincinnati, Ohio.—Harry Hake, Arch., Provident Bank Bldg., is preparing plans for the construction of a convention hall, to cost \$250,000.

Lakeview, Ohio.—John Warner, Arch., Marion Bldg., Cleveland, has prepared plans for the construction of a building on West 14th St., for the Highland Congregational Church. Estimated cost, \$40,000.

Lakeview, Ohio.—Charles W. Hopkinson, Arch., Rose Bldg., Cleveland, has prepared plans for the construction of a library to cost \$50,000.

Lornia, Ohio.—H. G. Ford, Arch., has prepared plans for the construction of a three-story fireproof high school. Estimated cost, \$150,000.

Toledo, Ohio.—Mills, Rhines, Bellman & Nordhoff, Archs., are preparing plans for the construction of a hotel at Jefferson Ave. and St. Clair St., for W. D. Stroud, Los Angeles, Calif. Estimated cost, \$400,000.

Battle Creek, Mich.—Plans are being prepared by M. J. Morehouse, Arch., 343 S. Dearborn St., Chicago, Ill., for a five-story and basement hall building, 60x100 ft., for the Kellogg Toasted Corn Flake Co., Battle Creek. Estimated cost, \$150,000.

Detroit, Mich.—Stahl, Kinsey & Chapman, Archs., 117 Fort St., W. for the preparing plans for the construction of a two-story and basement, 75x75-ft. church for the Bethany Presbyterian congregation. Estimated cost, \$75,000.

Antigo, Wis.—P. J. Hansen & Co. are contemplating the construction of a theater, 44x185 ft., at Antigo.

Horseshoe, Wis.—Plans are being prepared by I. W. Buemling, Arch., 521 Jackson St., Milwaukee, for the construction of a three-story and basement, 52x160-ft. building for the Travelers Hotel Co.

Milwaukee, Wis.—Brust & Philipp, Archs., Free Press Bldg., are preparing plans for the construction of a three-story and basement, 82x150-ft. building, for St. Catherine's Home for Working Girls, at 1131 Sycamore St. Estimated cost, \$100,000.

Racine, Wis.—Guilbert & Funston, Archs., Robinson Block, are preparing plans for the construction of a two-story, 140x240-ft. grade school, gymnasium and auditorium at West Racine. The estimated cost is \$100,000.

Superior, Wis.—F. E. Johnson, Arch., is preparing plans for the construction of a two-story and basement, 59x100-ft. theater for C. D. Armstrong, Ashland.

Union Grove, Wis.—Bids will be received, about Nov. 1, by M. J. Tompkins, Secy. of the Home for Feeble-Minded and Epileptics, Capitol Bldg., Madison, for the construction of buildings for the institution at Union Grove. Estimated cost, \$1,000,000.

Prices of Engineering Materials

PRICE CHANGES AND THE BUSINESS OUTLOOK

Distinct improvement in the financial situation has marked the course of the month's events. Several weak stocks, which might have led to considerable trouble, have been cleared up. This does not, by any manner of means, indicate that money or capital is cheap, but a part of the task has been accomplished successfully. The ability of London to draw gold from the United States is evidently diminishing, and it is probable that by the first of November the balance of exchange will turn in favor of the United States. This does not mean that gold will flow back to us, but it will mean an end to the heavy outflow which has been so marked.

While it is difficult to secure capital, and the price is practically prohibitive in some instances, it is well to note that New England municipalities have been able to float long-term bond issues and the short-term notes of railways and industrial companies coming due are taken care of as they mature. Capital is undoubtedly accumulating, but it is not available for new construction. Numerous instances are found where contractors have taken bonds in payment for their work in lieu of the possibility of the work's being postponed.

Railroad construction is at the lowest point since the depression of the '70's, less money being put into permanent improvements by railways at this time, in proportion to the value of their property, than ever before. This is particularly noticeable in the purchases of new engines and rolling stock. The railway rate case has been reopened, but apparently, from newspaper accounts, there is little hope of any relief being granted.

The iron and steel industry is at a lower ebb than at any time in recent years. Export orders are few; the small amount of new construction in the United States has practically stopped the buying of steel. In fact, the output of the mills now is insufficient to make care of the replacements of the steel companies. As an indication of the hard position of the steel companies, it is noted that the United States Steel Corporation cut the dividend rate on its common stock to one-half of one per cent. The former rate was one and one-eighth per cent, quarterly.

The export situation is much improved. The buying of machine tools by the belligerent powers has been large; likewise, ammunition, horses, and automobiles. The purchasing agencies of the foreign governments have been busily engaged during the last few days in buying automobiles and it is probable that this country will have an opportunity to furnish as much war material as it can produce.

Foreign trade is rapidly assuming normal proportions. Large shipments of foodstuffs and military supplies, as well as the belated shipments of cotton now beginning, are rapidly clearing the situation, and it is probable that foreign exchange will shortly turn in favor of the United States; particularly if European holders of American securities do not sell them in this market. This is of course impossible as long as the New York Stock Exchange remains closed.

Advertisements of contracts in which it is definitely stated that the contractor will be paid in bonds of the municipality or county, are common. This is simply another way of getting around the law prohibiting the sale of stocks or bonds at less than par.

Financial relief will probably be found for the more hard-pressed cotton planters, but the cotton states have suffered a severe setback which cannot be minimized. Their ability to go into diversified farming another year may mean much continued prosperity, but it does not buy food and clothes for this winter.

Added to the long list of dividends which have been passed since the announcement of the war, comes the reduction in the quarterly dividend of the United States Steel Corporation. This conservative policy may not be to the liking of investors, but it is thoroughly sound, and will make for better business in the future.

The inability of railways to secure funds, as well as municipalities and industrials, during the past two or three years, is now generally recognized as being due more to the preparation of European nations for general war, than to any other thing. While it is not much consolation to ascertain this, it is some satisfaction to find out that after all, the ills to which we have been subject were not all of our own making.

Labor is anxious to work, and at comparatively any wage. Factory help is very plentiful. Rough labor is in larger supply than at any other time in the last half dozen years.

An indication of better business in mill construction is the recent award made by the Naumkeag Steam Cotton Co., Salem, Mass., to the Turner Construction Co., 11 Broadway, New York, N. Y., for the construction of a mill and storehouse. The mill will be four stories and basement, 125x72 ft., and the storehouse 10 stories and basement, 215x50 ft., both of reinforced concrete.

LABOR

Conditions for the worker are more unsatisfactory than they have been since the panic of 1907, and in fact, at that time there was more hope for a better employment of labor in the near future than there is at present. It is evident that even should the railways secure higher rates, and consequently have more funds, they would apply these funds to liquidating past indebtedness before making new improvements. With the cities and municipalities reticent in borrowing money, there will be less construction than in several years. The building industry during the winter, at least, will be cut down to small proportions.

CEMENT, LIME AND BRICK

Cement—Manufacturers of cement have not had as much business as they expected; that is, strictly new business. Deliveries on old contracts, however, have kept up surprisingly well, particularly in and around New York, and one of the peculiar features of the situation is the report that the sellers of Rosendale cement have disposed of more cement this year than in several years past. Moreover, the towing business on the Hudson River has been more satisfactory than ever before. There is no cutting the price of cement, and while it is likely that a good deal of the production of the Lehigh Valley District will have to be cut down, it is significant to note likewise that the towing business on the Hudson River has been more active than in several years. An export demand has made itself felt, but due to the inability of bankers to provide a medium of exchange and to extend credit, there has been practically no business closed. Moreover, steamship accommodations are most unsatisfactory, particularly for this kind of material, which must go at a low rate or not at all.

In the West prices are 5c. per bbl. lower. The quotations given below do not include the allowance of 40c. made for bags returned.

Boston.....	\$1.32	Chicago.....	\$1.10
Cleveland.....	1.25	Detroit.....	1.14
Duluth.....	1.22	Jersey City.....	1.06
Minneapolis.....	1.30	New York.....	1.18
Pittsburgh.....	1.05	St. Paul.....	1.30

Lime—Business is quiet, but prices are unchanged at 97c. per bbl. for state common, 200 lb. net; \$1.37 for 300 lb. "Star"; \$1.55 for 300 lb. finishing; \$1.10 for 200 lb. finishing and \$1.72 for 350 lb.

Brick—Prices are even lower than a month ago. For Hudson River common brick, delivered New York, the market is \$5 to \$5.25, bricks weak at that. Brittan River bricks are \$5.25 to \$5.50. Stocks appear to be accumulating in all markets.

CRUSHED STONE, SAND AND GRAVEL

Crushed Stone—The market continues without change. The quotations are absolutely nominal, 1½-in. stone selling at 90c., while ¾-in. stone sells at 95c. to 1.05. These quotations are for full cargo lots of 500 cu.yd., delivered alongside of dock, New York.

Sand and Gravel—Gravel is quoted at 90c. for 1½-in., but special gravel, which will pass subway specifications, is held at \$1.15. Sand sells for 50c. per cu.yd. The above quotations are for full cargo lots of 500 cu.yd., delivered alongside of dock, New York.

In Boston, gravel sells for 35c. per cu.yd. at quarry 35 miles out, the freight rate to Boston being 40c.

IRON AND STEEL

Pig Iron—The market has never been quite as dull since the depression of 1893 as it is at present. Even the financial panic of 1907, which resulted in a cutting down of production, was more drastic, perhaps, than at present, but there was some business. Now the trade seems to be at a standstill. A few foundries in New England have bought sparingly, and some cast-iron pipemakers have been in the market. But as a general rule, prices are slowly crumbling, and even at that, no buyers come into the market. It is significant that producers in the Alabama field maintain a price of \$10, but stocks are accumulating in the yards in large amounts.

Quotations for lots of 100 tons or over, ports named, are as follows: Cincinnati Southern Foundry No. 2, \$13 to \$13.50; Cincinnati Northern Foundry No. 2, \$14.25 to \$14.75; Cincinnati Northern Foundry No. 3, \$14 to \$14.25; New York Northern Foundry No. 1, \$14.50 to \$14.75; New York Northern Foundry No. 2, \$14 to \$14.25; New York Northern Foundry No. 3, \$14 to \$14.25; Southern iron in the New York market is \$14.25 to \$14.50 for No. 2. Southern Foundry No. 2, Birmingham, \$10.

Steel Rails—There is practically no new business. Some of the Western lines are buying rails, but prices are nominal. These quotations are for lots of 500 tons and over. Standard sections of bessemer rails, 28"; open-hearth rails, 30". These quotations are f.o.b. Pittsburgh: Girder rails, 30-ft. lengths, \$36.40 per gross ton, and in 60-ft. lengths, \$38.40, both f.o.b. New York. Other quotations, f.o.b. Pittsburgh, for large lots, are as follows: Standard sections, 11.25; 23- to 45-lb. sections, 11.15; 16- and 20-lb., \$12.00; 12- and 14-lb., \$12.25; 8- and 10-lb., \$13.00.

Structural Shapes—Business is no worse than a month ago, except some of the shops have finished the work booked earlier and there are few new jobs coming in. Railroad work is at a standstill, but new building has not fallen off as much as many feared. Prices are more or less nominal at a reduction of \$1 per ton compared with last month. The base quotation is \$11.50 to \$12.00, Pittsburgh, for I-beams, 2 to 15 in.; channels, 2 to 1 in.; angles, 2 to 6 in., and V's, 3 in. and over. For other sizes, \$1.25 to \$1.30 is demanded. For T's, \$1.20 to \$1.25; and for S's, \$1.25 to \$1.30. The following lengths are charged at the \$1.35 to \$2.00 rates: Under 3 ft. to 2 ft. inclusive, 25c. per 100 lb.; 2 ft. to 1 ft. inclusive, 50c. per 100 lb. Cutting to lengths under 1 ft., \$1.55. No charges made for cutting to specified lengths over 3 ft.

*This material is available in regular widths of 14, 22, 26, 30, 34, 42, 46, 50, 54 and 58 in. Standard lengths in rolls are 100, 150, 200 and 300 ft.

METALS

Copper—It is becoming more and more evident day by day that the price of copper and of products made of this metal must go to new levels. With the market almost as dull as possible, with scarcely any business of quantity, comes the announcement that the British Government has put copper on the contraband list, with a view to shutting off supplies which go to Germany by way of Holland and Denmark. This is a serious blow to the copper industry in the United States, for Germany would continue to take much metal. The dullness has had little effect on prices. Sales have been at 11 1/4 to 1 1/2 c. delivered in New York. The unevenness in the market is seen by quotations of 12 to 12 1/2 c. for copper wire in carload lots at the mill, 16 1/2 c. for copper sheet. In Germany, electrolytic copper sells at about 20c.

Tin—The price of tin dropped below the 30c. level early in the month, but later advanced to 31 1/2 c. when announcement was made that a ship carrying 1000 tons of tin had been sunk. When it is realized that 1000 tons of tin is about 8% of the visible supply all over the world, the importance of such loss can be seen. But even this had little effect in keeping the price up, for by the end of October it had again dropped below 30c. Quotations range from 29 1/2 to 30 1/2 c. for large lots, depending on the nature of the transaction.

Lead—The market is again easier, sales in New York being made at 3.50c., and the St. Louis market quoted at 3.35 to 3.40c.

Spelter—The market has declined again, and 5.05 to 5.15c. is demanded in New York, while in St. Louis, prime Western brands of spelter can be had at 4.95c.

Aluminum—The metal is quiet and prices are easier, 18 to 19c. per lb. for 3/4 in. 1 ingot in large lots.

Antimony—All the antimony used in the United States is imported. At the outbreak of the war there were large stocks on hand in this country. At that time, prices shot up rapidly, but later declined. Antimony is now being shipped abroad. Quotations are much unsettled, ordinary brands selling at 14 to 15c., and Cooksons at 17 1/2 to 18c.

Miscellaneous Metals—The following quotations are per lb. for small lots, but they may be shaded for desirable orders: Bismuth \$3.75 to \$4.00 Brass tubes, iron-pipe sizes:

Construction News

ENGINEERING NEWS

Construction News is published weekly, except on Sundays and public holidays. Subscriptions are set in CAPITALS.

RAILWAYS

♦Kentucky. The N. & W. R. Ry. Co. has been authorized to build a line from Lexington to Harrodsburg, Ky.

Illinois. The Chicago & North Western R. Co. has been authorized to build a line from Chicago to Hammond, Ind. The incorporators are C. S. Carter, Chicago; C. H. Detsche, St. Paul, Minn.; and J. W. Wolf and R. H. Wolf, Hammond, Ind.

♦Wisconsin. The Chicago & North Western R. Co. has been authorized to build a line from Chicago to Kingston-Grandon line in Wisconsin.

Texas. The A. N. & T. R. Co. has been authorized to build a line from Austin to Big Springs, Tex. The incorporators are J. H. Dutton, Austin, Tex.; about \$200,000. F. H. Dutton, San Antonio, Tex.; and J. H. Dutton, San Antonio, Tex.

Kansas. The A. N. & T. R. Co. has been authorized to build a line from Austin to Big Springs, Tex. The incorporators are J. H. Dutton, Austin, Tex.; about \$200,000. F. H. Dutton, San Antonio, Tex.; and J. H. Dutton, San Antonio, Tex.

Idaho. The A. N. & T. R. Co. has been authorized to build a line from Austin to Big Springs, Tex. The incorporators are J. H. Dutton, Austin, Tex.; about \$200,000. F. H. Dutton, San Antonio, Tex.; and J. H. Dutton, San Antonio, Tex.

Idaho. The A. N. & T. R. Co. has been authorized to build a line from Austin to Big Springs, Tex. The incorporators are J. H. Dutton, Austin, Tex.; about \$200,000. F. H. Dutton, San Antonio, Tex.; and J. H. Dutton, San Antonio, Tex.

Oregon. The A. N. & T. R. Co. has been authorized to build a line from Austin to Big Springs, Tex. The incorporators are J. H. Dutton, Austin, Tex.; about \$200,000. F. H. Dutton, San Antonio, Tex.; and J. H. Dutton, San Antonio, Tex.

California. The A. N. & T. R. Co. has been authorized to build a line from Austin to Big Springs, Tex. The incorporators are J. H. Dutton, Austin, Tex.; about \$200,000. F. H. Dutton, San Antonio, Tex.; and J. H. Dutton, San Antonio, Tex.

LOCAL RAILWAYS

Brockton, Mass. The Brockton St. Ry. Co. has been authorized to build a line from Brockton to Boston, Mass.

Franklin, Mass. The Franklin St. Ry. Co. has been authorized to build a line from Franklin to Boston, Mass.

New Haven, Conn. The New Haven St. Ry. Co. has been authorized to build a line from New Haven to Boston, Mass.

Long Branch, N. J. The Long Branch St. Ry. Co. has been authorized to build a line from Long Branch to New York, N. Y.

Cambridge, Md. The Cambridge St. Ry. Co. has been authorized to build a line from Cambridge to Baltimore, Md.

Jacksonville, Fla. The Jacksonville St. Ry. Co. has been authorized to build a line from Jacksonville to Miami, Fla.

Albany, N. Y. The Albany St. Ry. Co. has been authorized to build a line from Albany to New York, N. Y.

Cincinnati, Ohio. The Cincinnati St. Ry. Co. has been authorized to build a line from Cincinnati to Cleveland, Ohio.

East St. Louis, Ill. The East St. Louis St. Ry. Co. has been authorized to build a line from East St. Louis to Chicago, Ill.

St. Paul, Minn. The St. Paul St. Ry. Co. has been authorized to build a line from St. Paul to Minneapolis, Minn.

Idaho. The Idaho St. Ry. Co. has been authorized to build a line from Idaho to Oregon, Ore.

Albany, N. Y. The Albany St. Ry. Co. has been authorized to build a line from Albany to New York, N. Y.

Dishes, Ariz. The Dishes St. Ry. Co. has been authorized to build a line from Dishes to Phoenix, Ariz.

Spokane, Wash. The Spokane St. Ry. Co. has been authorized to build a line from Spokane to Portland, Ore.

Sacramento, Calif. The California Terminal Ry. is making arrangements to construct an Interurban railway from San Francisco to Sacramento. W. Conlisk, San Francisco, is interested.

Shenandoah, Wash. The Council has granted a 30-year franchise to the Everett Ry., Light & Water Co. to extend its line from a connection with the Northern Pacific R.R. to Union Ave. and First St., Shenandoah. D. C. Barnes, Everett, is mgr.

Fresno, Calif. The Council has granted the Fresno Traction Co. permission to double track its lines over certain streets. Frank W. Webster, Fresno, is Gen. Mgr.

BARGE CANAL WORK, ALBANY, N. Y.

Bids were received, Oct. 20, by Duncan W. Peck, State Supt., Pub. Wks., for Contract K, constructing superstructure of three highway bridges in Seneca Falls and Waterloo and for Contract 115, constructing the superstructure of movable dam No. 4 over the Mohawk River at Scotia, from (A) Phoenix Bridge Co., 49 William St., New York, N. Y.; (B) Penn Bridge Co., Beaver Falls, Penn.; (C) Fort Pitt Bridge Co., 45 Broadway, New York, N. Y.; (D) Larkin & Sangster, Seneca Falls, N. Y.; (E) Toledo Bridge & Crane Co., Toledo, Ohio; (F) Luffer & Remick, Buffalo, N. Y.; (G) Chesley, Earl & Heimback, Inc., Buffalo, N. Y.; (H) Whitehead & Kales Iron Works, Detroit, Mich. The item bids were as follows:

CONTRACT K

	A	B	C	D	E	F	G	H

Safeguarding United States Investments. The precipitous fall in the price of securities listed on the New York Stock Exchange during the last days of July was due to the sales of the United States Government securities held by the public. The aggregate value of these securities was \$2,000,000,000. To pay for these securities in gold is impossible, to pay for them in foreign bills and merchandise would entail enormous losses for the United States. The United States Government securities held by the public are not to be sold for foreign bills. In a recent article in the *Journal of Commerce*, which is reprinted in part, this attitude is expressed that the latter course may be worked out.

The attitude of the administration toward the placing of United States Government securities in the hands of the public is a policy which has been made to it. At the same time, the United States Government securities held by the public are not to be sold for foreign bills. In a recent article in the *Journal of Commerce*, which is reprinted in part, this attitude is expressed that the latter course may be worked out. The attitude of the administration toward the placing of United States Government securities in the hands of the public is a policy which has been made to it. At the same time, the United States Government securities held by the public are not to be sold for foreign bills. In a recent article in the *Journal of Commerce*, which is reprinted in part, this attitude is expressed that the latter course may be worked out.

The possibility of settling matters in this way was not opened up. The question what should be actually regarded as a settlement was tentatively settled, and such a settlement has been one of the objects most earnestly sought by the administration for a good while. The adjustment of the cotton trade is the features of the working out of the problem, and similar action in the way of determining exactly what extent an embargo shall be enforced is in process of being considered. It is believed that complete relief of the export trade will be due to three conditions, as follows: (1) the United States will be able to secure the supplies of goods and raw materials in the United States; (2) settlement of outstanding claims regarding the treatment of the United States in foreign waters in neutral vessels and in years in general under the American flag; (3) working out of a system of loans under which all nations will be able to make their business with the United States on a basis of equality, each nation being relieved of its obligations of the United States which would otherwise be likely to be liquidated by the sale of securities and the demand for cash.

The United States Government securities held by the public are not to be sold for foreign bills. In a recent article in the *Journal of Commerce*, which is reprinted in part, this attitude is expressed that the latter course may be worked out. New Haven Indictments.—In the United States District Court, on Nov. 1, indictments were handed down charging the directors with conspiracy of the Sherman anti-trust law.

At the request of the government attorney, the court ordered the issuance of bench warrants for William Rockefeller, George Macculloch Miller, Charles F. Brooks, William Skinner, D. Newton Barney, Robert W. Taft, James S. Elton, James S. Henningsway, Lewis Cass Lydard, Charles M. Pratt, A. H. Robertson, Frederick F. Brooks, Henry K. Miller, Edward D. Robbins, formerly general counsel of the railroad; Alexander O'Connell, John L. Hillard, George F. Baker, Thomas A. Vail, C. S. Taylor, Theodore N. Vail, Edward Milligan and Francis T. Maxwell.

MUNICIPAL BOND SALES INCREASE

While still below normal, municipal bond sales made a far better showing in October than September. The sales for October aggregated \$15,755,700 according to the "Financial Chronicle".

The following table, compiled by that journal shows the output of permanent municipal bond issues for the month of October and the ten months in previous years.

	Month of October	For the ten months
1914	\$15,755,700	\$396,744,660
1913	12,351,441	317,421,189
1912	2,953,999	205,473,180
1911	26,848,621	341,092,191
1910	27,037,207	356,358,240
1909	19,117,826	288,747,287
1908	14,074,929	218,948,844
1907	9,793,358	209,816,322
1906	14,819,277	167,971,623
1905	19,915,006	144,927,223
1904	10,295,995	206,221,922
1903	12,196,585	122,942,785
1902	5,488,424	123,167,379
1901	7,719,197	109,103,198
1900	14,421,195	113,611,526
1899	9,314,484	104,241,291
1898	4,896,407	83,057,166
1897	6,872,293	113,239,756
1896	4,684,463	60,917,879
1895	6,697,012	94,950,924
1894	5,655,435	99,140,271
1893	11,939,373	52,413,939
1892	11,744,424	75,350,254

Gain in Automobiles. Statistics compiled by "Automobiles" as of Oct. 1, covering the official registration of automobiles in the several states, indicate that there were on that date not less than 1,734,223 cars of all types registered, as against 1,512,242 on July 1, a gain of 221,981 in three months. These figures, however, include a considerable proportion of duplication of registration, and, applying certain deductions, the probable total number of cars actually in use is placed at 1,573,369. These were divided by states as follows:

New York	140,475	Virginia	13,430
Pennsylvania	126,641	Maine	13,295
Ohio	122,772	South Carolina	13,060
California	118,850	North Carolina	13,460
Texas	118,641	Rhode Island	12,250
Michigan	118,000	Florida	10,681
Massachusetts	74,777	New Hampshire	9,020
Minnesota	72,936	Montana	8,841
Indiana	66,700	Alabama	7,950
Nebraska	62,129	West Virginia	7,100
New Jersey	61,675	Vermont	6,821
Missouri	50,612	Oklahoma	6,500
Kansas	45,313	Arkansas	5,415
Washington	27,132	Kentucky	5,240
Connecticut	25,137	Tennessee	4,795
South Dakota	20,314	Idaho	3,311
Illinois	19,145	New Mexico	2,971
Delaware	18,175	Pennsylvania	2,630
Colorado	17,450	Louisiana	2,430
North Dakota	17,003	Wyoming	2,190
Oregon	15,944	Mississippi	1,650
		Nevada	1,520
		Total	1,735,369

This division as to gas and electric power and commercial and passenger cars is not uniformly stated in the several states, but as the figures show the division was as follows:

	Total	Gas	Electric
State	regis.	per mer.	per mer.
Alabama	4,550	7,000	250
Arkansas	1,443	1,571	220
California	27,210	2,871	420
Colorado	20,000	18	500
Connecticut	20,000	2,000	1,200
Delaware	1,443	1,000	474
District of Columbia	1,815	1,815	1,491
Florida	10,000	1,000	923
Georgia	1,443	1,443	60
Idaho	1,443	1,443	60
Illinois	142,111	142,111	142,111
Indiana	14,119	13,610	500
Iowa	11,129	17,007	17
Kansas	11,129	11,129	187
Kentucky	5,500	5,500	25
Louisiana	11,944	14,472	137
Maine	12,552	112,000	1,071
Maryland	12,552	11,000	1,350
Massachusetts	4,012	2,742	114
Michigan	4,012	7,450	205

Construction News

*Denotes contract awarded-d. The names of bidders awarded contracts are set in CAPITALS.

IMPROVEMENT IN BUILDING OPERATIONS

There has been more activity in the building trade than in several months, notably the gain of October over September. While there is a loss for the month of October over the corresponding month of last year, it is not as great as the one in September over last year. In 20 cities in the Eastern States there was a total cost of new buildings from plans filed in October of \$15,780,695, compared with \$17,676,641 for the month of October, 1913, or a loss of 10%, whereas the loss in the same cities for September was 39%. The estimated cost of new buildings for the first ten months of 1914 was \$234,240,624, compared with \$244,916,477 of last year, or a loss of 5%.

In 22 cities in the Middle West, the loss was 24% for October, or \$16,820,300, compared with \$22,293,612 for October of last year. This is about the same percentage of loss as in September. There is a gain of 2% for the first ten months of this year over last, expressed in dollars it is \$215,503,529 for 1914 and \$210,754,757 for 1913.

In nine Southern cities there is a loss of only 25% for October. This is a gain of 16% over last month, for the loss for September was 41%. The total for October is \$1,776,372, compared with \$2,342,971 for last year.

Only five cities in the Pacific Coast States have been heard from, but the loss is small, both in the figures for October and for the first ten months of the year; however, there is a gain over last month. On the whole, the building figures for October from the entire country show an improvement.

The General Railway Signal Co., Rochester, N. Y., in a notice issued by W. W. Salmon, Pres. and Gen. Mgr., announces the following changes in organization: M. Wuerpel has been appointed Assistant to the President, S. H. Johnson, Vice-Pres., will be in full charge of the Sales Department, which includes all branch and foreign offices, commercial engineering, commercial inspection and contract installation, reporting to the President and General Manager, and with headquarters at Rochester. A Department of Publicity and Education has been created and H. M. Sperry will assume duties as manager of this department, reporting to the President and General Manager, and cooperating closely with all departments. This department will take over the advertising and catalog work and will undertake an educational campaign in regard to the signaling of steam and electric railways.

The Edgewood Manufacturing Co., 36 Liberty St., New York, N. Y., has built during the years it has been in business over 37,000 steam and electric hoists. This is probably the greatest record of hoisting engine production made by any one concern.

Contracts to Be Let

Bids received until Dec. 1, 1914.

New County Building

PLANNED BY THE NEW YORK MUNICIPAL BUILDING COMMISSION, NEW YORK.

Sealed proposals will be received by the New County Building Commission, at the office of the Architect, at the County Building, at the corner of Madison and Fourth Streets, in the City of Westchester, New York, until 10 A. M. East on Friday, the 19th day of November, 1914, for the design and construction of the New County Building, to be situated between King Street and Fourth Street, and between Third Street and Park Street, in the City of Westchester, New York, and will be opened by the Commission at 10 A. M. on Saturday, the 20th day of November, 1914. Each proposal for the design and construction of the building shall be accompanied by a certified check or cash deposit in the amount of Eight Hundred Dollars (\$800.00).

Bids received until Nov. 17, 1914.

Union School Building

Lockport, N. Y.

SEALED PROPOSALS will be received by the Board of Education, City of Lockport, New York, at its office in the Union School Building, up to eight o'clock p.m., November 17th, for the material and labor as shown on plans and included in specifications prepared by Wm. Nell Smith, Architect, 501 Park Avenue, New York City; and the heating and ventilation plans and specifications prepared by Douglas Sprague, Engineering Architect, 39 Cortlandt Street, New York City, for the enlargement and improvement of the Union School Building, which plans and specifications have been approved by the State Education Department.

Plans and specifications may be seen at the office of said Board of Education, or at the offices of said architects. Copies thereof may be obtained by prospective proposers upon request to said Board and payment of five dollars per set of plans and specifications—said amount to be returned to the proposer upon return of plans and specifications to the Board, in good condition.

Separate proposals may be made by contractors for the labor and material included in the separate Masonry, Carpentry, Plumbing, Electrical, and Heating and Ventilation specifications, and proposals for the entire work, separately itemized, may be submitted. All proposals must be accompanied by a certified check or a proposal bond for two per cent of the amount of the proposal, as guarantee that proposer will enter into contract for the full performance of the work upon which proposal is submitted, if the proposal is accepted.

The Board of Education hereby reserves the right to accept or reject any or all of the proposals that may be received. By order of the Board of Education, Lockport, N. Y., October 19th, 1914.

EMMET REIKNAF,

Clerk of the Board.

Bids received until Dec. 7, 1914.

Sewage Collecting System

Dunellen, New Jersey

Sealed proposals for constructing a sewage collecting system will be received by the Council of the Borough of Dunellen, at 11 A. M. December 7th, 1914. Proposals should be deposited with William P. Deering, Clerk of the Borough, at the Borough Office, 100 North Avenue, Dunellen, New Jersey.

The system comprises a system of vitrified pipe sewers with manholes. There are about 14 miles of street sewer, and about 15 miles of 15 inches in diameter, two small sewage collecting pipes, and about 1500 feet of 6-inch cast-iron force main.

Each proposal must be accompanied by a certified check on a local bank or trust company for Two Thousand (\$2000) and by a surety bond to whom the contract is awarded, will be required to execute the contract and furnish a surety bond for the full performance of the contract within ten days of the date of the award of the contract.

The Council reserves the right to accept or reject any or all bids. The Council also reserves the right to obtain from George W. Brown, 100 Broadway, New York City, upon payment of \$2.00 per set of plans, which will be refunded to the proposer upon return of the plans in good condition.

The Council reserves the right to accept or reject any or all bids. The Council also reserves the right to obtain from George W. Brown, 100 Broadway, New York City, upon payment of \$2.00 per set of plans, which will be refunded to the proposer upon return of the plans in good condition.

The Council reserves the right to accept or reject any or all bids. The Council also reserves the right to obtain from George W. Brown, 100 Broadway, New York City, upon payment of \$2.00 per set of plans, which will be refunded to the proposer upon return of the plans in good condition.

The Council reserves the right to accept or reject any or all bids. The Council also reserves the right to obtain from George W. Brown, 100 Broadway, New York City, upon payment of \$2.00 per set of plans, which will be refunded to the proposer upon return of the plans in good condition.

Construction News

Demand that Aliens Quit New York Subway

Stoppage of work on New York's entire rapid transit system, thereby throwing 15,000 men out of work, is threatened by the action of the Bricklayers' Union in resurrecting a long forgotten clause of the labor law, which states that only citizens of the United States may be employed on municipal work.

The following is a letter which John Gill, business agent of the Bricklayers and Masons Union, has sent to all subway contractors:

"I beg to notify you that your company and all subcontractors doing work are openly and wantonly violating the labor law of this state with regard to employing men on your work who are not citizens of the United States, and with regard to paying laborers and tradesmen wages less than the prevailing rate; also, with regard to complying with the labor law, which requires that the contractor shall keep the name of each worker and if a naturalized citizen, the date of citizenship and the court out of which his papers were issued.

"I hereby demand that you make a thorough investigation among your employees, with the advantages at your disposal, to ascertain the above facts. I desire to further notify you that these violations are open and notorious and conducted by you to such an extent as to be a matter of common knowledge.

"In the event that you fail to comply with the law forthwith, I shall take whatever steps, as a citizen and as a representative of organized labor, to prosecute you for such violations, as may be necessary."

The Public Service Commission has made a statement which says, in part:

"The penalties prescribed for violations of the law include not merely the forfeiture of the contract, but also the punishment of offenders for misdemeanor. It is also said that if the Public Service Commission should countenance such violation its members would be liable to prosecution for malfeasance."

In an interview, Chairman McCall, of the Public Service Commission, said: "The commission is obliged to enforce the law. As to whether or not it is unconstitutional, I can only say that we have no authority to interpret the law ourselves. We would not be justified in paying vouchers if we were aware of violations, and I doubt if the comptroller would recognize them if we did issue them. We are considering steps to test the law as quickly as possible."

That 90% of the pick and shovel men are aliens is admitted by the contractors. They say they can't get native Americans to do this work. Even among skilled laborers the percentage of aliens is large. Some contractors have laid off a part of their forces pending legal advice.

Opening the Federal Reserve Bank—Important at any time, but doubly so now, since the financial centers of Europe have been shaken to their foundations and foreign credit severely dislocated, was the opening of the Federal Reserve Bank on Nov. 16. The credit and financial interchange of the country for more than a generation has been carried on through a loose organization of more than 7500 national banks, many state banks, and trust companies. The national banking system, which was purely a measure put forward at the time of the Civil War, to facilitate the sale of government bonds, has been antiquated for more than a score of years. Great hopes are held that the new system of credit interchange, with proper Federal control and supervision of business men, will free the country from the yearly financial stringency during the period, August to December, incident to the gathering of the crops. The United States having the largest store of gold in the world, has made little scientific use of this vast hoard for the promotion of credit. The new system, which began last Monday, comprises twelve reserve banks located in Boston, New York, Philadelphia, Cleveland, Richmond, Atlanta, Chicago, St. Louis, Minneapolis, Kansas City, Dallas and San Francisco. The bank in New York, which like all other Federal Reserve Banks, does business only with other banks, received over \$100,000,000 the first day. The first receipt given out was \$21,000,000.

The Government to Aid Manufacturers—On July 15, Congress appropriated \$10,000,000 for commercial attaches, to be appointed by the Secretary of Commerce, to investigate and determine whereby the sale of manufactured goods and raw materials from the United States, might be extended in foreign lands, such commercial attaches to report directly to the Secretary of Commerce. This plan was promoted prior to the beginning of hostilities in Europe, and also before there was any knowledge that foreign markets would be open to the United States as a result of war. While the war has of necessity changed the time for promoting these attaches to various countries, they will be more valuable as trade scouts now than was before thought possible. According to the bill in Congress, the number was limited to ten, and of these nine have already been appointed and assigned prior to the beginning of hostilities in Europe, and also before there was any knowledge that foreign markets would be open to the United States as a result of war. The appointments are: A. H. Baldwin, to London, England; Erwin W. Thompson, to Berlin, Germany; Dr. Albert Hale, Buenos Ayres, Argentina; C. W. A. Veditz, to Paris, France; Julian H. Arnold, to Berlin, China; Prof. Lincoln Hutchins, to Rio de Janeiro, Brazil; A. I. Harrington, to Lima, Peru; Verne L. H. Havens, to Santiago, Chile; and Henry D. Baker, to Petrograd, Russia.

The Platinum Output of the United States in 1913 was about 1934 oz., according to the U. S. Geological Survey. About 650 oz. was recovered from gold and copper bullion was made. The production of the country from imported sands was 39,154 ounces.

Orders for War Materials Placed in the United States

Manufacturers in the United States have secured much business from the belligerent nations for war materials. A large steel company has orders enough to tax its facilities for a year, and there are many smaller orders, as follows:

The Baldwin Locomotive Works, Philadelphia, Penn., has begun work on the recent order from the Russian Government for 30 locomotives.

An order for 25,000 steel barrels for export has been placed in Cleveland while an export house in New York states that it has been figuring on an inquiry for 50,000 steel barrels for Russia. High freights have been a stumbling block, deterring the quick closing of orders.

The Fifth-Sterling Steel Co., Denner, Penn., has received an order for 20,000 three-inch, 10,000 six-inch and 5000 eight-inch shells, while the Economy Cartridge & Fuse Co., of Pittsburgh, Pa., has an order for 5,000,000 rounds of Mauser rifle ammunition. A New England manufacturer of ammunition early in the war received an order for 50,000,000 rounds of ammunition.

The Pittsburgh Case & Supply Co. has received an order for \$50,000 worth of wire rope, chains and fittings, while the Macomber & White Rope Co., Chicago, has received a similar order amounting to \$47,000. These materials will be used by the Studebaker Wagon Co., South Bend, Ind., in connection with a \$6,500,000 order from the English and French governments for wagons and harness.

Important Electrification Contract

Announcement has been made that the Chicago, Milwaukee & St. Paul R.R. will start active work on the electrification of 450 miles of main line in the spring. A contract involving \$2,000,000 has already been entered into with the General Electric Co. While the work involves a substitution of motive power on 450 miles of line (see "Engineering News," Jan. 16, 1913), only 117 miles are involved in this contract. The work will include the mountain district between Avery, Idaho, and Harlowton, Mont. This work is under the supervision of C. A. Goodnow, Asst. to A. J. Earling, Pres.

Rapid Transit Line Held Up—The Public Service Commission for the First District announced during the week that it had failed to legalize the Flushing route, known as Route No. 54, by the filing of the necessary number of property owners' consents. This route is an extension of the Corona, Queens Borough, route from Alburtis Ave. through Flushing to Bay-side. The Long Island R.R. Co. owns sufficient property along a portion of the route to control the majority of the consents, which must represent a majority in value in this particular vicinity. The railroad company refuses to sign the necessary consent. The Commission now has under consideration the adoption of one of the following ways of settling around the difficulty: It may go to the Appellate Division, which may give its consent to the building of the line in lieu of the property owners' consents; or it may adopt two new routes, which, taken together, would be identical with the present route, and the first route, which is for immediate construction, would extend from Alburtis Ave. to Main St., Flushing, and the other the rest of the distance. The Commission considers it probable that it will secure sufficient consents for the building of the Flushing line.

The National City Bank of New York has been granted permission by the Government of Argentina to establish a branch at Buenos Aires. This will be the first branch of an American bank to be opened on foreign soil. The bank will be managed by John H. Allen, former manager of the Bank of Hayti. A. V. Edwards, of the credit department of the National City Bank, is expected to arrive in Buenos Ayres within the next week, to have charge of the formation of a credit bureau to be organized in connection with the branch for the purpose of furnishing credit information to exporters and importers.

Iron Ore in the Philippines—The Philippine "Journal of Science" reports that H. P. Cameron, department engineer for Mindanao and Sulu, has discovered a deposit of iron ore in Surigao province on the island of Mindanao, which appears to be of large extent, probably covering an area of 40 square miles. The ore is a cherty red limonite, carrying 55 to 65% metallic iron, or perhaps 60% when the iron is in the form of iron pyrites. The area over which the deposit extends has been reserved from mineral location, by order of the government, until further information can be obtained as to the extent and value of the deposit, through surveys to be made by the Bureau of Science.

READERS' WANTS

The Department of Public Works, Detroit, Mich., George H. Penick, Commissioner, would like to receive information from firms manufacturing receptacles suitable for the storage of garbage, refuse and ashes. The department contemplates the enforcement of ordinances relative to the storage of such materials, in conformity to their being removed by the Department. The Commissioner would also like to receive cuts, specifications and prices.

CATALOG NOTICES

The Marlon Malleable Iron Works, Marion, Ind., Catalog. Shoes for wood waste pipe. Illustrated, 136 pp., 4x2 1/2 in.

David Lupton's Sons Co., Philadelphia, Penn., Catalog No. 8. Steel sash, partitions, doors, sash operating device, etc. Illustrated, 81 pp., 7x11 in.

Eureka Machine Co., Lansing, Mich., Catalog Concrete and mortar mixers. Illustrated, 32 pp., 7x10 in.

RAILWAYS

New York—The New York City Council has passed a resolution authorizing the construction of a new subway line from 142nd St. to 157th St. The estimated cost of the project is \$100,000,000. The city council has also authorized the construction of a new subway line from 157th St. to 172nd St. The estimated cost of this project is \$100,000,000.

North Carolina—The North Carolina General Assembly has passed a bill authorizing the construction of a new railway line from Raleigh to Charlotte. The estimated cost of the project is \$100,000,000.

Louisiana—The Louisiana General Assembly has passed a bill authorizing the construction of a new railway line from New Orleans to Baton Rouge. The estimated cost of the project is \$100,000,000.

Michigan—The Michigan General Assembly has passed a bill authorizing the construction of a new railway line from Detroit to Flint. The estimated cost of the project is \$100,000,000.

Wisconsin—The Wisconsin General Assembly has passed a bill authorizing the construction of a new railway line from Milwaukee to Madison. The estimated cost of the project is \$100,000,000.

Minnesota—The Minnesota General Assembly has passed a bill authorizing the construction of a new railway line from Minneapolis to St. Paul. The estimated cost of the project is \$100,000,000.

Kansas—The Kansas General Assembly has passed a bill authorizing the construction of a new railway line from Kansas City to Topeka. The estimated cost of the project is \$100,000,000.

Texas—The Texas General Assembly has passed a bill authorizing the construction of a new railway line from Dallas to Fort Worth. The estimated cost of the project is \$100,000,000.

California—The California General Assembly has passed a bill authorizing the construction of a new railway line from San Francisco to Los Angeles. The estimated cost of the project is \$100,000,000.

Alberta—The Alberta General Assembly has passed a bill authorizing the construction of a new railway line from Edmonton to Calgary. The estimated cost of the project is \$100,000,000.

ELECTRIC RAILWAYS

Mattawamkeag, Maine—The Mattawamkeag Electric Railway Co. has been authorized to construct a new electric railway line from Mattawamkeag to Bangor. The estimated cost of the project is \$100,000,000.

New Bedford, Mass.—The New Bedford Electric Railway Co. has been authorized to construct a new electric railway line from New Bedford to Taunton. The estimated cost of the project is \$100,000,000.

Coorg, Penn.—The Coorg Electric Railway Co. has been authorized to construct a new electric railway line from Coorg to Harrisburg. The estimated cost of the project is \$100,000,000.

Philadelphia, Penn.—The Philadelphia Electric Railway Co. has been authorized to construct a new electric railway line from Philadelphia to Camden. The estimated cost of the project is \$100,000,000.

Rochester, Penn.—The Rochester Electric Railway Co. has been authorized to construct a new electric railway line from Rochester to Erie. The estimated cost of the project is \$100,000,000.

Richmond, Va.—The Richmond Electric Railway Co. has been authorized to construct a new electric railway line from Richmond to Petersburg. The estimated cost of the project is \$100,000,000.

Nashville, Tenn.—The Nashville Electric Railway Co. has been authorized to construct a new electric railway line from Nashville to Memphis. The estimated cost of the project is \$100,000,000.

Nashville, Tenn.—The Nashville Electric Railway Co. has been authorized to construct a new electric railway line from Nashville to Knoxville. The estimated cost of the project is \$100,000,000.

Louisville, Ky.—The Louisville Electric Railway Co. has been authorized to construct a new electric railway line from Louisville to Lexington. The estimated cost of the project is \$100,000,000.

Paris, Ky.—The Paris Electric Railway Co. has been authorized to construct a new electric railway line from Paris to Louisville. The estimated cost of the project is \$100,000,000.

Carbondale, Ill.—The Carbondale Electric Railway Co. has been authorized to construct a new electric railway line from Carbondale to Springfield. The estimated cost of the project is \$100,000,000.

East St. Louis, Ill.—The East St. Louis Electric Railway Co. has been authorized to construct a new electric railway line from East St. Louis to Chicago. The estimated cost of the project is \$100,000,000.

Peoria, Ill.—The Peoria Electric Railway Co. has been authorized to construct a new electric railway line from Peoria to Springfield. The estimated cost of the project is \$100,000,000.

Wharton, Ill.—The Wharton Electric Railway Co. has been authorized to construct a new electric railway line from Wharton to Springfield. The estimated cost of the project is \$100,000,000.

Wisconsin West—The Wisconsin West Electric Railway Co. has been authorized to construct a new electric railway line from Wisconsin West to Madison. The estimated cost of the project is \$100,000,000.

Indiana Electric—The Indiana Electric Railway Co. has been authorized to construct a new electric railway line from Indiana Electric to Indianapolis. The estimated cost of the project is \$100,000,000.

El Paso, Tex.—The El Paso Electric Co. has been authorized to construct a new electric railway line from El Paso to San Antonio. The estimated cost of the project is \$100,000,000.

Los Angeles, Calif.—The Los Angeles Electric Railway Co. has been authorized to construct a new electric railway line from Los Angeles to San Diego. The estimated cost of the project is \$100,000,000.

San Francisco, Calif.—The San Francisco Electric Railway Co. has been authorized to construct a new electric railway line from San Francisco to San Jose. The estimated cost of the project is \$100,000,000.

Toronto, Ont.—The Toronto Electric Railway Co. has been authorized to construct a new electric railway line from Toronto to Niagara. The estimated cost of the project is \$100,000,000.

Edmonton, Alta.—The Edmonton Electric Railway Co. has been authorized to construct a new electric railway line from Edmonton to Calgary. The estimated cost of the project is \$100,000,000.

LIGHT, HEAT AND POWER

Turners Falls, Mass.—The Turners Falls Electric Co. has been authorized to construct a new electric power plant at Turners Falls. The estimated cost of the project is \$100,000,000.

Bridgeport, Conn.—The Bridgeport Electric Co. has been authorized to construct a new electric power plant at Bridgeport. The estimated cost of the project is \$100,000,000.

Perth Amboy, N. J.—The Perth Amboy Electric Co. has been authorized to construct a new electric power plant at Perth Amboy. The estimated cost of the project is \$100,000,000.

Kutztown, Penn.—The Kutztown Electric Co. has been authorized to construct a new electric power plant at Kutztown. The estimated cost of the project is \$100,000,000.

Pittsburgh, Penn.—The Pittsburgh Electric Co. has been authorized to construct a new electric power plant at Pittsburgh. The estimated cost of the project is \$100,000,000.

Logan, W. Va.—The Logan Electric Co. has been authorized to construct a new electric power plant at Logan. The estimated cost of the project is \$100,000,000.

Spray, N. C.—The Spray Electric Co. has been authorized to construct a new electric power plant at Spray. The estimated cost of the project is \$100,000,000.

Oran, Fla.—The Oran Electric Co. has been authorized to construct a new electric power plant at Oran. The estimated cost of the project is \$100,000,000.

Mobile, Ala.—The Mobile Electric Co. has been authorized to construct a new electric power plant at Mobile. The estimated cost of the project is \$100,000,000.

Gretna, La.—The Gretna Electric Co. has been authorized to construct a new electric power plant at Gretna. The estimated cost of the project is \$100,000,000.

Melville, Va.—The Melville Electric Co. has been authorized to construct a new electric power plant at Melville. The estimated cost of the project is \$100,000,000.

Johnson City, Tenn.—The Johnson City Electric Co. has been authorized to construct a new electric power plant at Johnson City. The estimated cost of the project is \$100,000,000.

Carlin, Ky.—The Carlin Electric Co. has been authorized to construct a new electric power plant at Carlin. The estimated cost of the project is \$100,000,000.

New Haven, Ky.—The New Haven Electric Co. has been authorized to construct a new electric power plant at New Haven. The estimated cost of the project is \$100,000,000.

Cleveland, Ohio—The Cleveland Electric Co. has been authorized to construct a new electric power plant at Cleveland. The estimated cost of the project is \$100,000,000.

Crestline, Ohio—The Crestline Electric Co. has been authorized to construct a new electric power plant at Crestline. The estimated cost of the project is \$100,000,000.

Lebanon, Ohio—The Lebanon Electric Co. has been authorized to construct a new electric power plant at Lebanon. The estimated cost of the project is \$100,000,000.

Okemos, Ohio—The Okemos Electric Co. has been authorized to construct a new electric power plant at Okemos. The estimated cost of the project is \$100,000,000.

Paris, Ill.—The Paris Electric Co. has been authorized to construct a new electric power plant at Paris. The estimated cost of the project is \$100,000,000.

Marshfield, Wis.—It is reported that the Empire Gas Improvement Construction Co., Minneapolis, Minn., is considering the installation of a gas system in Marshfield. A. M. Sutherland is Pres. of the company.

Crystal City, Tex.—The City Council has granted a franchise to A. D. Riddle, Cotulla, Tex., to construct and operate an electric-light plant.

Orange, Tex.—It is reported that W. H. Stark, formerly Vice-Pres. and Secy. of the Orange Ice, Light & Water Co. has purchased the plants of the company and will enlarge and improve the light and power plant.

Seguin, Tex.—See item under "Water Supply and Irrigation."

Billings, Okla.—See item under "Water Supply and Irrigation."

Yale, Okla.—The City Council is having plans prepared by H. Askin, Consult. Engr., Cushing, Okla., for the installation of a municipal electric-light plant and extensions to the water-works system at a total cost of about \$15,000.

Ellensburg, Wash.—The Northern Pacific Ry. will equip its new coal bunkers at Ellensburg throughout with electrically operated machinery.

Fowler, Calif.—The Fowler Gas Co. will issue \$15,000 in bonds to make additions to the plant and extensions to the system.

San Francisco, Calif.—The Board of Public Works has had tentative plans prepared by James F. Whittlesey, Elec. Engr., for a plant for lighting and heating the Civic Center at a cost of about \$225,000. Noted Oct. 15.

Edmonton, Alta.—The Edmonton, Dunvegan & British Columbia Ry., which had plans prepared for the construction of a new power house at St. Albert's Trail, Alta.

BRIDGES

Portland, Maine.—In addition to the list of bids published in the issue of Nov. 12 for the several divisions of the bridge between Portland and South Portland, the following bids were received for piling for foundation work: J. C. Carlin Construction Co., \$27,545; John Cashman & Sons Co., \$24,190; H. P. Converse & Co., \$21,527; T. L. Exvre, \$21,820; E. W. Foley Co., \$23,570; Foundation Co., \$26,982; Fraser, Brace & Co., \$24,961; Holbrook, Gould, Collins Co., \$25,135; MacArthur Bros. Co., \$27,832; McHarg-Barton Co., \$23,732; John Monks & Son, \$51,356; T. Stuart & Sons Co., \$33,663; Walsh Construction Co., \$27,332.

Concord, N. H.—The Board of Public Works has engaged bridge engineers to prepare plans for a new steel bridge with concrete roadway to replace the present wooden structure over the Merrimack River at the South End. William B. Howe is City Engr.

Holyoke, Mass.—It is reported that plans are being prepared by W. H. Howes, Holyoke, for a new bridge at the upper end of Elmwood Park at Pine St. It will be of concrete, 65 ft. long and 40 ft. wide. T. J. McCarthy is City Engr.

Hartford, Conn.—Bids will be received until 2 p.m., Nov. 30, by the State Highway Commissioner for the construction of a 60-ft. bridge on the Clayton Road, North Canaan Township, and for removing an old bridge in Old Lyme Township to a new location, and constructing abutments, wing walls and approaches, and painting the bridge.

New York, N. Y.—(Borough of Queens)—Press reports state that the Committee on Stock and Bond Exchange, Estimate of the City of New York will recommend an immediate appropriation of about \$400,000 for reconstructing the Queensboro Bridge to adapt it to the operation of rapid transit trains. F. J. H. Kracke is Comr. Dept. of Bridges.

Olenn, N. Y.—At the recent general election, the citizens voted in favor of building a new bridge, estimated to cost \$20,000, over the Allegheny River at its same point between Seventh and 19th St. H. E. Bunce is City Engr.

Schuylerville, N. Y.—(Official)—The following bids were received Nov. 6 for the construction of a bridge over the west channel of the Hudson River near Schuylerville: Laffer, Remick & Shea, \$23,650; E. W. Foley, \$26,790; Parker & Beebe, \$22,820; J. C. Carlin, \$23,323; Holler & Shepard, \$22,637; Callahan & Prescott, \$21,958; Flood & Van Wert, \$21,555; E. N. & R. E. SPALDING, Sutherland, Conn., \$18,051 (awarded contract); Sealing & Crocker, \$25,135; Croton Bridge Co., \$21,579; Harrison Burton Co., \$21,820. Noted Oct. 15.

Nutley, N. J.—It is reported that the Board of Chosen Freeholders of Essex County, Newark, plans to build a new bridge over the Third River at Essex St. and Vreeland Ave., Nutley.

Levittstown, Penn.—The Borough Council has awarded the contract for the construction of a bridge on Boreas St. to WAGAMAN BROS., Dallastown, Penn., at about \$20,000.

New Castle, Penn.—(Official)—The Committee on Grounds and Public Buildings, Harrisburg, has awarded the contract for removing the foundation and building a new one over the Shenandoah River at Grant St., New Castle, to GEORGE W. ENSIGN, INC., Harrisburg, at \$43,247. Other bidders were: Canton Bridge Co., Canton, Ohio, \$51,111; Penn Bridge Co., Beaver Falls, Penn., \$19,172; McClintic-Marshall Co., Pittsburgh, \$50,835; Fort Pitt Bridge Works, Pittsburgh, \$11,900. Noted Oct. 29.

Sparrows Point, Md.—(Official)—The Maryland Steel Co. has awarded the contract for the construction of a reinforced concrete ore trestle at its Sparrows Point plant to the RAYMOND CONCRETE PILE CO., 100 Cedar St., New York, N. Y.

Appomattox, Va.—(Official)—Bids will be received until noon, Nov. 27, by the Clerk of the Circuit Court of Appomattox County for the construction of a 72-ft. bridge over the Falling River about four miles from Appomattox, and for a 37-ft. bridge over Oak Creek about seven miles from Appomattox. The Childrey Co., Richmond, Va., is Engr.-in-Charge.

Lynchburg, Va.—The Chesapeake & Ohio Ry., the Norfolk & Western Ry., the Southern Ry., the city of Lynchburg and Amherst County have entered into an agreement for the construction of a 1700-ft. reinforced concrete viaduct over the James River at the foot of Seventh St., Lynchburg. The estimated cost is \$300,000, of which the city will pay \$50,000 and Amherst County \$100,000. H. L. Shaner is City Engr. Noted July 16 and July 30.

Princeton, N. Va.—The Princeton Power Co., Princeton, plans to construct the steel bridges on its railway line between Princeton and Bluefield, a distance of 12 miles. G. H. Hill is Ch. Engr.

Bids will be received, until Nov. 19, by the Board of Commissioners of Mercer County, for the construction of three reinforced-concrete bridges over the Bluestone River. W. L. Lee is Ch. Engr. of Const.

Fort Lauderdale, Fla.—Bids were opened, Nov. 3, by the Commissioners of Dade County for the construction of a double-track steel bridge over the New River at Fort Lauderdale, but all were rejected as too high. This is the second time that bids for this work have been rejected. The bids for various designs follow: Edwards Construction Co., Tampa, \$26,300 and \$35,500; Champion Bridge Co., Wilmington, Ohio, \$24,455; Standish & Allen Co., Chicago, Ill., \$18,800, \$19,050, \$27,800 and \$28,300. Noted July 23, Aug. 20 and Oct. 22.

Vicksburg, Miss.—Owing to the alleged deficiencies of the plans prepared for the steel bridge over the Big Black River at Holt's Ferry, the Boards of Supervisors of Warren and Hinds County postponed opening bids for the construction of the bridge from Nov. 3, until early in December. J. D. Laughlin, Vicksburg, is Chancery Clk. of Warren County. Noted Oct. 15 and Oct. 23.

New Orleans, La.—The city has awarded the contract for the construction of the Strauss trunnion basket bridge over the New Basin Canal at City Park Ave. to the PENN BRIDGE CO., Beaver Falls, Penn., at \$34,800. Noted Oct. 1 and Nov. 5.

Miamisburg, Ohio.—(Official)—The following bids were received Nov. 9, by the Board of Commissioners of Montgomery County, Dayton, for the construction of the steel superstructure of Bridge No. 241, over the Great Miami River at Linden Ave., Miamisburg: BROOKVILLE BRIDGE CO., Brookville, \$14,300 (awarded contract); King Bridge Co., Cleveland, \$47,450; Riverside Bridge Co., Martin's Ferry, Ohio, \$50,560; Toledo Bridge Co., Toledo, \$52,990; E. M. Scully, Columbus, \$52,475; Childers Construction Co., Columbus, \$50,818; Victor C. Smith is County Engr. Noted Oct. 29.

Sciotoville, Ohio.—The Chesapeake & Ohio Ry. has awarded the contract for the substructure of a bridge across the Ohio River, to the DRACO CONTRACTING CO., Pittsburgh, Penn. It will consist of 27 concrete piers for bridge and approaches. The estimated cost of the entire bridge is \$2,000,000. F. L. Cabell, Richmond, Va., is Ch. Engr. Chesapeake & Ohio Ry. Noted Jan. 29 and July 23.

Alton, Ill.—(Official)—A special election will be held Nov. 28, in the city of Alton to vote on the question of a bond issue of \$55,000 for the purpose of building a bridge between Seventh St. between State and Albany St., and \$15,000 for building and equipping a fire station in Upper Alton. E. R. Kennedy is City Clk.

Taylorville, Ill.—The Commissioners of Christian County have awarded the contract for the construction of a 126-ft. bridge over the Fork of the Mississippi River, to MILLER & HUSBAND, Springfield, Ill. It will be of steel, four spans of 24 ft. each and one of 30 ft., with a 15-ft. concrete roadway.

Keokuk, Iowa.—Recent press reports state the bids will be asked soon by the Keokuk & Hamilton Bridge Co. for the reconstruction of the bridge over the Mississippi River between Keokuk and Hamilton, Ill. The estimated cost of the work is \$400,000. Plans were prepared by Ralph Modjeski, Orchestra Hall, Chicago, Ill., and have been approved by the War Department. Gilman is Engr. of the Keokuk & Hamilton Bridge Co. Noted Aug. 6 and Sept. 3.

Shenandoah, Iowa.—The Commissioners of Page County, Clarinda, have awarded a contract for the construction of a bridge over Four-Mile Creek at Shenandoah to BRIGGS & ORRIS at \$4200. Half the cost will be borne by the city of Shenandoah.

Independence, Kans.—Bids will be received until Nov. 23, by the Board of Commissioners of Monticounty, Gerald A. C. Wells, Clk., for the repair of the McTaggart bridge over the Verdigris River.

Wichita, Kans.—(Official)—The City Council has awarded the contract for the construction of a reinforced concrete bridge over the Little Arkansas River between Central and South Meiners Parks to the MARSH ENGINEERING CO., Des Moines, Iowa, at \$13,950. There were eight other bidders. Noted Oct. 29.

New York, N. Y.—(Borough of Manhattan)—Bids will be received about Dec. 10, by Maynick & Franke, Archs., 25 East 26th St., for the 20-story store and loft building to be constructed at Broadway and 26th St., for the estate of Frederick Ayr, 141 Milk St., Boston, Mass. The estimated cost is \$800,000.

Yonkers, N. Y.—The contract for the construction of the Grand Theater on South Broadway has been awarded to GEORGE T. KELLEY, Yonkers. The estimated cost is \$300,000. Noted Oct. 29.

Bloomfield, N. J.—The general contract for the construction of the two-story brick school on Grove St., for the Board of Education, has been awarded to A. P. CLARK Co., 264 Claremont Ave., Montclair, N. J. Noted Oct. 22.

Newark, N. J.—The T. B. Peddie Estate plans to construct a mercantile building at 123 Market St. It will be four stories and basement, 125x40 ft. Estimated cost about \$55,000. Bruce B. Kitchell, 207 Market St., Newark, is Arch.

Swedesboro, N. J.—The First National Bank of Swedesboro plans to construct a building to cost \$10,000.

Upper Montclair, N. J.—The general contract for the construction of the three-story Edward Russ Memorial Hall, at the State Normal School, has been awarded to FRED KILGUS, 13 South Sixth St., Newark, N. J. Noted Oct. 1.

Pittsburgh, Penn.—(Official)—The contract for construction of the High School has been awarded to L. L. STUART, Pittsburgh, at \$711,100. Bids were received Nov. 3, and other bidders were: Thomas Reilly Co., Pittsburgh, \$681,226; John H. Parker Co., New York, \$701,505; George A. Fuller Co., New York, \$701,505; Henry Shoen Co., Pittsburgh, \$701,183; James G. Doak, Philadelphia, Penn., \$716,313; W. F. Trimble & Sons Co., Pittsburgh, \$721,797; George Hogg Co., Pittsburgh, \$722,125; Thompson Starrett Co., Pittsburgh, \$733,325; Golden & Ritchie, Pittsburg, Penn., \$779,510; William Dail, Cleveland, Ohio, \$805,300; Marble Arch Co., New York, \$857,757. Noted Oct. 22.

Wilkes-Barre, Penn.—Sturdevant & Poggi, Archs., Coal Exchange Bldg., have prepared plans for the five-story Masonic Temple to be erected at Wilkes-Barre. The estimated cost is \$75,000.

Newport News, Va.—The lowest bid received for the construction of the General and Nonsectarian Hospital was submitted by J. W. Davis, Newport News, at \$39,402. Donald McKee, Newport News, is Arch.

Norfolk, Va.—Plans have been completed by C. M. Major, Arch., Norfolk, for the building to be built for the Fraternal Order of Eagles.

Charleston, W. Va.—H. Rus Warne & David Dick, Archs., are preparing plans for remodeling and additions to the Masonic Temple. The estimated cost is \$50,000.

Wheeling, W. Va.—The contract for the construction of the hotel on the Lyric Theatre site has been awarded to the GATES BUILDING CO., Wheeling. The estimated cost is \$65,000.

Clearwater, Fla.—Bids will be received, until Nov. 23, by the Pinellas County Commissioners, for additions and alterations to the county jail. Willis R. Biggers, Tampa, Fla., is Arch. Noted Nov. 5.

Jacksonville, Fla.—The Southern Investment & Amusement Co. has awarded the contract for the construction of a theater on Adams St. to the JACKSONVILLE CONTRACTING CO., Jacksonville. The estimated cost is \$60,000.

West Palm Beach, Fla.—The contract awarded to E. P. MAULE, for the construction of the courthouse at West Palm Beach, has been rescinded by the Pinellas County Commissioners. Noted Oct. 29.

Lexington, Ky.—The Board of Trustees of the Transylvania University contemplates constructing a dormitory. The estimated cost is \$16,000.

Cincinnati, Ohio—Plans are being prepared by Elzner & Anderson, Archs., for the construction of a Y. M. C. A. building on West Ninth St. Estimated cost, \$100,000.

Cleveland, Ohio—The Euclid Logan Co. is planning the construction of a seven-story fireproof apartment at East 97th St. and Euclid Ave. Estimated cost, \$30,000. W. B. Davis is Pres.

Cleveland, Ohio—R. M. Dulett Co., Archs., 474 Lennox Bldg., have prepared plans for the construction of a three-story club house, at 2143-51 West 25th St., for the German Club. Estimated cost \$25,000. Noted Aug. 27.

Cleveland, Ohio—Bids will be received until 1 p.m., Dec. 7, by the Clerk of the Board of Education, East Sixth St., Cleveland, for the alterations and additions to the Central High School on East 55th St., near Cedar Ave. Frank G. Hogen is the Dir. of Schools.

Hudson, Ohio—The contract for the construction of a school has been awarded to RODERICK D. GRANT. Estimated cost, \$13,535. Noted Oct. 8 and 22.

Lakeview, Ohio—Charles W. Hopkinson, Arch., Rose Bldg., Cleveland, is preparing plans for the construction of four public schools, estimated to cost, \$160,000.

Warren, Ohio—The contract for the construction of the six-story building, for the Western Reserve National Bank, has been awarded to GEORGE A. FULLER Co., 40 Taylor Arch., Cleveland, Noted Oct. 24.

Park Oaks, Ind.—F. L. Kronenberg, Arch., Madison, Wis., is preparing plans for the construction of the two-story and basement, 80x166 ft., Elmside grade school.

Terre Haute, Ind.—The contract for the construction of a normal school has been awarded to the BEDFORD STONE CONSTRUCTION CO., Indianapolis. Noted Aug. 6, Sept. 3, Oct. 1 and 22.

Michigamme, Mich.—The contract for the construction of a school and boiler house has been awarded to J. S. WALTMAN by the Board of Education. Estimated cost, \$40,000.

Ypsilanti, Mich.—Bids will soon be received by the Board of Education, Ypsilanti, for the construction of the \$110,000 high school. Noted Sept. 3.

Chicago, Ill.—Murray Wolbach, 105 South Dearborn St., plans for the construction of a number of apartment buildings, estimated to cost \$1,100,000.

Fall River, Wis.—Bids are being received by Viola Hains, Clk., School Ed., for the construction of a school building, Chandler & Park, 400 Main St., Racine, are the Archs.

La Crosse, Wis.—The State Board of Normal Regents, Madison, contemplates constructing a \$75,000, physical training building at the State Normal School. Estimated cost, \$75,000.

Ladysmith, Wis.—Plans have been prepared for the construction of a three-story and basement, 60x110-ft. hospital, for the Mantellate Sisters, O. S. M.

Madison, Wis.—Plans are being prepared by Claude & Starck, Archs., Badger Annex, for the construction of the Lincoln grade school. Estimated cost, \$100,000.

Waukegan, Wis.—The lowest bids submitted for the construction of the school at 99th and Elm St. were as follows: Walter Buchholz, masonry, \$20,575; Wiersma & Laatsch, carpentry, \$15,341; Paul Riessen & Co., excavating and concrete, \$12,281; Erdman & Meyer, stone, \$5373; Grant Marble Co., marble, \$24,000; American Structural Steel Co., steel, \$1888; Mueller Co., heating, \$9470; National Heat Regulator Co., heat regulation, \$1043; R. Jeske, sheet metal.

Minneapolis, Minn.—The contract for the construction of the two-story and basement 126x173-ft. grade school has been awarded to J. E. PILGRAM, Minneapolis. Noted Dec. 25, 1913, and Nov. 5.

Kansas City, Mo.—The contract for the construction of a 100x133-ft. building at Troost Ave. and 38th St., for the First English Lutheran Church, has been awarded to CHARLES W. LOVETT. Estimated cost, \$10,000.

Fort Worth, Tex.—The Commissioner's Court of Tarrant County, contemplates constructing a jail at Fort Worth, to cost about, \$150,000.

Nezperce, Idaho—Hyslop & Westcott, Spokane, Wash., have prepared plans for the construction of a four-story fireproof hotel to cost \$100,000.

Pocatello, Idaho—G. S. Allen and H. E. Bartlett are contemplating the construction of a hotel to cost \$20,000.

Grand Canyon, Ariz.—The Atchison, Topeka & Santa Fe Ry. is preparing plans for the construction of a hotel at Grand Canyon, to cost about \$65,000.

Seattle, Wash.—Plans are being prepared by Howells & Stokes, Archs., Henry Bldg., for the construction of a four-story, reinforced-concrete office and store building for P. S. Foust. The estimated cost is \$200,000.

Portland, Ore.—ROYAL JOHN-ARNOLD Co. has been awarded the contract for the construction of the Couch School, at an estimated cost of \$119,581. The heating contract was awarded to W. W. COX, at \$26,038. Noted Oct. 15.

Decoto, Calif.—The contract for the construction of dormitories for the California Masonic Home has been awarded to THOMAS H. DAY'S SONS, San Francisco. Estimated cost, \$34,787.

Dixon, Calif.—The Board of Education plans the construction of a \$53,000 high school at Dixon. D. H. White, Fairfield, Calif., is the Supt. of Schools of Solano County.

Eagle Rock (Glendale post office), Calif.—H. A. Reeves, Arch., Chamber of Commerce Bldg., Los Angeles, is preparing plans for the construction of a fireproof school at Eagle Rock. Estimated cost, \$60,000.

Los Angeles, Calif.—The Trustees of the Cienega School District are contemplating the construction of a \$60,000 school H. G. Marxmiller, 411 Grant Bldg., is interested.

Oakland, Calif.—A. F. White, Portland, Ore., contemplates constructing an office building on Franklin St., to cost \$125,000.

Petaluma, Calif.—Brainerd Jones, Arch., is preparing plans for the construction of a school at Fair and Douglas St. for the Petaluma School District. Estimated cost, \$100,000.

San Francisco, Calif.—Plans are being prepared by William Beasley, Arch., for the construction of a three-story and basement, heated and store building on Fourth and Market Sts. Estimated cost, \$200,000.

San Francisco, Calif.—Henry C. Smith, Arch., is preparing plans for the construction of a reinforced-concrete apartment house at Taylor and Greene Sts. Estimated cost, \$60,000.

San Francisco, Calif.—J. R. Hanify contemplates constructing a theater and store building at Eddy and Fillmore Sts., an estimated cost of \$50,000. Reid Bros., Sutter and Montgomery Sts., are the Archs.

San Francisco, Calif.—The contract for the construction of a one-story brick and steel building for the Third Church of Christ Scientist, has been awarded to ARTHUR ARLETT, Shelton Bldg., San Francisco. Estimated cost is \$80,000.

Woodland, Calif.—Plans are being prepared by W. H. Weeks, Arch., 75 Post St., San Francisco, for the construction of a grammar school. Estimated cost, \$100,000.

Montreal, Que.—Bids will be received until Jan. 15, 1915, by Gauthier & Doust, Archs., 180 St. James St., Montreal for the construction of a building for the Deaf and Dumb Institution, St. Laurent, Montreal, Que.

Ottawa, Ont.—Plans are being prepared by C. Borden, Arch., Quebec, Que., for the construction of a \$156,000 church on Wellington and Fairmont St., for the Capuchin Fathers.

Toronto, Ont.—The Board of Education contemplates constructing a three-story, brick school on Euclid Ave., near Falls St. Estimated cost, \$55,800.

British Columbia, Can.—The contract for the construction of four terminals for the Grand Trunk Pacific Ry. Co., Winnipeg, Man., at Prince George, Endako, Smithers and Pacific, has been awarded to CARTER, HALL AND ALDINGER, Winnipeg, Man. Estimated cost, \$300,000.

Construction News

Testing the Alien Labor Law in Court.

Numerous conferences have been held by those interested in building New York's new Rapid Transit system with the view to finding a way out. The law is simple, clear and mandatory in its provision that "Citizens of the United States shall be employed." The only discretionary power is that "Citizens of the State of New York shall be given preference."

The unions are by no means a unit as to the advisability of pressing the matter, for it is evident if the excavating is delayed, and most of the aliens are employed at that work, that it will throw out of work a great number of skilled citizens during the winter. Three contractors, the Cranford Co., the Dock Contracting Co. and Oscar Daniels, have discharged their alien laborers and thus far are meeting with little or no success in obtaining citizen pick and shovel workers.

The contention that American workmen can be obtained at \$2.50 to \$3 per day is probably as correct as it is economically unsound. There is no likelihood of any great amount of excavating being done at such wages. That wages are the crux of the matter is seen in the following statement of Antonio Sangimbeni, organizer of the Excavators' Union.

"The objections of the other unions to our alien members are largely based on the fact that the alien laborers have worked for small wages. But we are making preparations to demand higher wages for them, and in this we are being assisted by the 1400 members of the Rockmen's Union, 600 of whom are citizens. As there are aliens in nearly all of the unions whose members are engaged in subway work, it seems as if there was too much jealousy on the part of the other unions."

Contractors, although troubled, are pleased that the matter should have been brought up at this time, for there is a chance of repealing the law, and there is more likelihood of securing citizen laborers than at any time in the last four years.

An attempt will be made to test the constitutionality of the law. Such a case will be given preference in the Court of Appeals.

Viewed from another angle it might be advantageous to postpone further work, since progress has been far more rapid than was anticipated, until legislative relief is obtained.

Improved Demand for Bonds—Sales of municipal bonds in October amounted to \$13,141,429, according to the "Financial Chronicle"; this is the largest output since the war began, but is still far below previous years. In the three months of August, September and October, the sales have amounted to \$33,041,924, compared with \$85,546,251 in the corresponding month last year. In fact, the sales for the three months mentioned have not fallen below \$60,000,000 in any year since 1911. In spite of the relatively poor showing in the last three months the sales of municipal bonds for the first ten months of the year surpass those of any previous full calendar year.

National and State Debts

Coming as they do at a time when there is widespread inquiry whether state and city governments can continue increasing their indebtedness for public improvements, recent figures published by the Census Bureau throw a new light on the subject.

As is always the case, figures furnished by the government are not brought down to date, still the comparison with former years gives the trend of events. The sums involved are so enormous that for many purposes it is far more convenient and satisfactory to give figures indicating the per capita debt. It is sufficient to show that the national debt amounted to \$1,028,000,000 in 1913 and the aggregate debt of the 48 states was \$345,000,000. These figures do not include the indebtedness of smaller geographical units such as counties, cities and townships.

Comparison of Debts

The accompanying table shows the debts of the nation and states year by year from 1901 to 1913, inclusive. Under the headings "Amount" six figures are omitted in each case.

Fiscal Year	Total		*Indebtedness		48 States	
	Amount	Per Capita	Amount	Per Capita	Amount	Per Capita
1913.....	\$1,374	\$14.15	\$1,028	\$10.59	\$345	\$3.57
1912.....	1,327	13.89	1,027	10.75	299	3.15
1911.....	1,291	13.75	1,015	10.81	275	2.95
1910.....	1,302	14.11	1,046	11.34	256	2.78
1909.....	1,265	13.95	1,023	11.29	241	2.67
1908.....	1,177	13.22	938	10.53	232	2.70
1907.....	1,113	12.74	878	10.05	235	2.70
1906.....	1,202	14.01	964	11.24	238	2.79
1905.....	1,228	14.59	989	11.75	238	2.85
1904.....	1,202	14.56	967	11.71	235	2.86
1903.....	1,157	14.29	925	11.42	232	2.83
1902.....	1,208	15.23	969	12.22	239	3.03
1901.....	1,273	16.38	1,044	13.44	228	2.95

*Less sinking fund assets or fund available for payment of debt.

From this it is clear that the national indebtedness, as far as the burden of each individual is concerned, is being reduced in spite of the Panama Canal expenditures, while the States are increasing their indebtedness; especially during the last two years.

Nearly half the indebtedness of all the states is incurred by New York and Massachusetts while the credit of these two states stands perhaps higher than any other in the Union.

While deductions drawn from few figures are apt to be misleading it is worthy of notice that the states of Massachusetts and New York make up more than half the total debt, yet it is well known that these two states can market their bonds at as low a rate of interest, if not lower, than any other states. This might indicate that the market for state bonds is wider than may be indicated.

The accompanying compilation shows the total and per capita debt of the several states.

Debt, Less
Sinking Fund Assets

State	Amount	Per Capita
Alabama.....	\$13,132,375	\$5.95

Robert Lee, Tex.—The construction of an interurban electric line from Robert Lee to Bionville is being promoted by the two towns and along the route of the road. The road is about 10 miles long.

Lewiston, Idaho—The State Highway Commission has granted a franchise to A. G. North, Lewiston, to construct a street car line across the Lewiston-Clarkston bridge.

Flagstaff, Ariz.—The Tucson Rapid Transit Co. has under consideration the construction of several miles of electric street cars. It has applied to the City Council for a franchise.

Prineville, Ore.—The Metellus, Prineville & Eastern Ry. Co. has completed surveys for the construction of a railway from Prineville to Metellus, about 10 miles.

San Rafael, Calif.—The California Terminal Ry. Co. is planning a way for its proposed electric interurban line from San Rafael to Sacramento, about 90 miles. C. F. Egan is in charge.

Stockton, Calif.—The Stockton Electric Ry. Co. has been authorized by the city to extend its tracks on the city street. W. Webster, Stockton, is Gen. Mgr.

Ottawa, Ont.—The Morrisburg & Ottawa Electric Ry. Co. is planning an electric line from Morrisburg to Ottawa. J. K. R. Citizens Bldg. Ottawa, is interested.

New Britain, Conn. - Walter P. Crabtree, Arch., has prepared plans for a boiler house for the new vocational high school. The building will be 49x74 ft., with a 125-ft. chimney. It will be equipped with six tubular boilers and positioned along a dirt road. Bids will be received at the same time as the high school building.

Trenton, N. J. Mayor Frederick W. Donnelly has recom-

Hastings, Penn. At the recent general election the citizens of this town voted in favor of a bond issue of \$32,000, to be used for the purpose of a municipal electric lighting system.

Idle Equipment—From the most recent report of the American Railway Association it shows that there was a net surplus of 170,096 freight cars on the railroads of the United States and Canada on Nov. 1, 1914, compared with 151,882 Oct. 1, 1914.

The following table shows the comparative conditions of freight traffic on the railroads at various periods within the past year:

1914—	Surplus	Shortage	Net Surp.
Nov. 1	173,255	2,229	170,096
Oct. 1	154,342	2,360	151,982
Sept. 1	132,382	2,355	131,027
Aug. 1	138,108	2,059	136,049
July 1	165,294	1,918	163,376
June 1	174,260	2,115	172,145
May 1	198,998	2,333	196,665
April 1	228,384	1,843	226,541
March 1	220,876	1,333	219,543
Feb. 1	232,994	660	232,334
Jan. 1	242,572	770	241,802
Dec. 1	239,406	764	238,642
Nov. 1	230,532	1,654	228,878
Oct. 1	213,324	455	212,869
Sept. 1	141,525	2,013	139,512
Aug. 1	132,010	7,145	124,865
July 1	159,450	1,907	157,543
June 1	199,385	2,333	197,052
May 1	211,960	2,282	209,678
April 1	217,274	2,385	214,889
March 1	190,521	1,671	188,850
Feb. 1			
Jan. 1	107,513	5,698	101,815
Dec. 1	67,446	10,212	57,234
Nov. 1	26,352	2,907	23,445
Oct. 1	38,276	40,118	*1,842
Sept. 1	37,198	41,994	*4,796
Aug. 1	41,994	31,620	10,374

*Net shortage.

The fact that there is a comparative shrinkage in the demand for freight capacity on Nov. 1 this year of over 170,000 cars compared with the net shortage of 1842 cars at the same part of last year speaks for itself in viewing relative conditions of business in domestic lines.

Steel Company to Expand—The Wickwire Steel Co., Tonawanda, N. Y., proposes to extend its manufacturing by building a new billet mill and mills for rolling rods and wire. The company will also join with the Cement-Solvay Co., Syracuse, N. Y., in the construction of by-product coke ovens. The Wickwire Steel Co. has just filed a mortgage for \$2,500,000 to provide funds for this work. It is expected that construction work will start next spring on the steel plant and coking ovens. An expenditure of \$1,500,000 is being made at this time.

The First-Sterling Steel Co., Pittsburgh, Penn., has recently received an order from the allied forces of Europe for 20,000 three-inch, 10,000 six-inch and 5000 eight-inch shells. This is one of the largest orders booked since the beginning of the war. It is reported that some larger projectiles have been ordered from the same company.

The MacArthur Concrete Pile & Foundation Co. has appointed Douglas-Milligan Co. as its Sales Agents for Eastern Canada, with main office in the New Birks Bldg., Montreal and branch office at 95 King St., East, Toronto. The company is also equipped to construct foundations for all sorts of structures where unfavorable soil conditions are encountered. It has already done a large amount of this work both in Canada and the United States.

The MacArthur Concrete Pile & Foundation Co. has sold the patent rights to drive the Pedestal Pile in Japan to the Oriental Compress Co., Tokio, Japan. The reputation of this important form of concrete piling is recognized by progressive Japanese engineers and contractors and this purchase emphasizes anew the spirit of enterprise and advancement of the Japanese people.

Packing Goods for Export—Probably no subject has been related more by government officials and the press than that of proper packing for export. It would seem as though American manufacturers had grasped the situation by this time but evidently they have not. The following letter from Mr. Hood, the representative of "Engineering News" in South America, written from Callao, Peru, again brings this subject to the attention of manufacturers:

"I previously called attention to the carelessness of American shippers in the matter of packing. I want to reiterate that American shippers send their goods here in crates while foreign shippers enclose them in boxes."

"Americans use 1-in. and 1½-in. material while foreigners use 2-in. and 2½-in. lumber and their boxes are all reinforced by heavy iron crating, screwed in, and the whole protected by bands of sheet iron on exposed edges."

"It will be useless for us to create a market here if shippers do not pack their goods as described. The reason for this is that there are few harbors here and unloading is effected by transferring to lighters in heavy seas."

"The fault lies with the big shipper as well as small, and it is a wonder we have any trade here at all. Here are two instances in Quito, vouched for by Mr. Chas. S. Hartman, the American Minister to Ecuador."

"1st. The Quito Electric Light & Power Co. bought seven motors from one of the largest, if not the largest, manufacturers in the United States. These motors arrived in Quito absolutely bare of any crate or other protecting material."

"2d. Senior Monje ordered laundry machines from the United States and they arrived in Quito, in flimsy crates, broken in all places. As the broken parts cannot be made in this country, the machines are absolutely useless. Senior Monje emphatically declared that under no circumstances will he buy anything further from the United States."

Construction News

THE ALIEN LABOR CASE IN COURT

The Bricklayers & Masons Union has withdrawn its complaint filed with the Public Service Commission for the First District against the Dock Contractor Co., for alleged violation of the Labor Law.

John Gill, Business Agent of the union, had complained that this company, which has the contract for the new subway in Broadway between Bleecker St. and Union Sq., had been employing workmen who were not citizens of the United States, this being a violation of the Labor Law which states that only citizens may be employed on municipal work.

Upon the affidavit of W. V. McMenimen, Vice-Pres. and Gen. Mgr., of the Dock Contractor Co., that the company has not employed anyone but citizens since Nov. 7, Gill withdrew his complaint; but immediately filed another against the Underpinning & Foundation Co., a sub-contractor on the section of the Dock Contractor Co. The allegation against this company is the same as that previously made against the Dock Contractor Co.

William E. Heim, 1 Madison Ave., a taxpayer and employee of one of the subway contractors was granted an injunction by Judge Davis, restraining the Public Service Commission from holding up the vouchers of subway contractors pending a ruling by the courts.

THE NEW UNION STATION AT KANSAS CITY, MO.

The new union station at Kansas City, Mo., which was opened to traffic on Nov. 1, is shown in the accompanying cut.* The building is of Bedford stone, with trimming of gray granite and cast concrete blocks. The large central portion contains the main hall, 240x103 ft., 92 ft. high, with a semicircular ticket office having 24 windows. Around this hall are the various station facilities, and approaches to the restaurant and dining rooms in the right wing and to the baggage room in the left wing. Railway offices occupy the upper floors.

makers of typewriters, who opened an office in the Argentine with a view to selling machines on long credit by means of the installment-lease system so much used in this country. He sold one machine on which he received several payments, but then got nothing for some months, despite his urgent correspondence. One day the machine in question was sent in for repairs. Very naturally it was held and the purchaser notified that it would not be returned until some arrangement was made respecting the balance due.

The next day the agent of the typewriter company found himself in jail. There he stayed until the efforts of the American consul and a promise never to do it again secured his release. It seems that in that country a sale is a sale; the property changes hands "for keeps," and no string can be tied to it.

Another fact of importance was brought out, that is, European transportation lines have a system of rebates calculated to make it difficult for Americans to break in. A contract is entered into by a merchant in South America by which he agrees to have all his imports come by a certain line, in consideration for which he is to have a 10% ocean-freight rebate, payable six months later. This is enough to make it advantageous for him to have goods from this country sent to Europe and reshipped by the transportation company with which he has the contract, instead of shipping direct from here.

Business Results of the War—Evidences are multiplying that the cutting off of supplies from Europe is stimulating the creation of new industries in this country. As a result of the stoppage of potash shipments from Germany, the Pittsburgh Industrial Development Commission has organized and incorporated a company, to be known as the Farmers' Fertilizer Co., having \$1,000,000 capital. Seven acres of land have been purchased and the company will employ 100 men

NEW UNION STATION, KANSAS CITY

The waiting room, 350x78 ft., occupies a building behind the headhouse and extending across the tracks. Along each side of this is a broad corridor with stairways to the train platforms below, and the waiting room has a door at each stairway. Outgoing passengers pass through these doors, while incoming passengers pass along the corridors to the main hall. The top of the trainshed is about level with the street, as shown. A brief description of the new station and terminal was given in our issue of Oct. 29.

The building cost about \$6,000,000, and the land, tracks, etc., about \$6,000,000 more, while the total cost of the station, approaches, new belt line, etc., which are included in the new terminal works, represent over \$10,000,000. The George H. Fuller Co. had the contract for the station. Jarvis Hunt was the Architect, and John V. Hanna is Chief Engineer of the Kansas City Terminal Ry.

Painters on South American Trade—People who sell in South America should post themselves on the commercial law of the country with which they are dealing.

At a recent conference of manufacturers in Boston, the story was told of a representative of one of the leading

in manufacturing commercial potash under a patented process. It will make use of the slag from the Pittsburgh mills, which heretofore has been a waste material, by mixing it with Tennessee phosphate. Orders have come from the nations at war for supplies, such as clothing, ammunition and guns.

A Vermont manufacturer of ammunition has recently received an order for \$2,500,000 worth of rifle cartridges for one of the belligerent powers. In order to handle this contract, rush orders for \$250,000 worth of machinery have been placed.

Robert Pluym, representing Pluym-Ochs, Ltd., Petrograd, in an interview at the offices of the American Express Co., 65 Broadway, New York, said that his firm was in the market for agricultural machinery, machine tools, and miscellaneous supplies. Russia, he said, had been spending yearly \$500,000,000 for German goods, and that now the United States inevitably must get the bulk of this trade.

Municipal Bond Sales—A sharp falling off in municipal bond sales in November was reported by the "Financial Chronicle." They amounted to \$12,779,800, compared with \$36,708,700 in the corresponding month last year. The total sales this year aggregate \$427,862,300, which is far larger than any previous year.

Prices of Engineering Materials

PRICE CHANGES AND THE BUSINESS OUTLOOK

Sentiment, the incentive which starts the mainspring of business, has decidedly improved. From all parts of the country come reports of a better feeling among manufacturers, distributors, and men conversant with the business situation. In many localities, improvement in business has already been seen, but this is by no means general, and in some cases the reverse is true. But there is a feeling that business conditions will improve from now on, and in spite of the terrible losses in Europe, this country of ours must go on. Many new avenues of business have been looked into, but as yet only a little work has been done toward their development.

Of primary importance, so far as construction work is concerned, is the announcement that the Chicago, Milwaukee & St. Paul will immediately start on the electrification of 167 miles of its Mountain Division. This is the first important railway contract that has been let since the war, and emphasizes the advantage of working when material and labor are low.

Orders for munitions of war and supplies for the armies in Europe have been exceedingly large. Various estimates are given as to the total amount of these orders, but because of duplication and the impossibility of securing any real information until shipments are being made, it is out of the question to form any exact estimate as to their value. They undoubtedly will run into the hundreds of millions of dollars, and it would seem as though the stream of goods to Europe had only started.

Numerous factories have been built as a result of the war, chiefly by the manufacture of munitions of war, but other manufacturers are making preparations to do an increased business. More attention is being paid to the manufacture of alloy steel and electrical steels than ever before, and laboratory experiments have been made for the manufacture of dye stuffs. There is no doubt that these materials can be made in the United States just as satisfactorily as abroad, if we only have to do it.

An announcement by the President of the United States that heretofore there will be more cooperation between the Government at Washington and the railroads, was received with delight. That the people are getting tired of a lot of regulations aimed at the railroads, is perhaps seen in the referendum vote repealing the Missouri Pull Car Law. During the last week in November, the Interstate Commerce Commission handed down a decision allowing rate increases in the West and in the South.

The iron and steel industry of the country is working at perhaps 30% of capacity. New orders are being received at about that rate. Stocks are not accumulating, and it is evident that prices are near bottom. Some exceedingly low quotations have been made for the delivery of fabric and material for use by the Isthmian Canal Commission, and cast-iron pipe is lower, perhaps, than before in a great many years. It is reported that the Pennsylvania R.R. bought cast-iron pipe for \$17.50 delivered to lines of railway. The city of Boston recently purchased pipe at \$19.70. Similar low quotations have been current in other branches of the trade.

It would seem as though this were a good time for municipalities to make improvements. Recently a small water works job was let, job which would ordinarily cost \$60,000 to \$65,000, and there were 42 contractors who put in bids for the work. On a government job, more than one hundred sets of plans were requested. Contractors all over the country are anxious to do some kind of work, and perhaps too anxious for their own advantage. It would be better for some of them to stop work for a year or so rather than take contracts at figures where there can be no hope of a profit.

Contractors on the New York subway have been greatly disturbed by contemplated action under a 17-year-old law which had never before been enforced. This alien labor clause, reference to which is made in another column, will not tie up the building of subways in the city, but may delay them somewhat for the next two or three months. It will be possible to secure enough laborers who have naturalization papers, and if the law is not declared unconstitutional, it must be pointed out that this is an especially good time to test such a law.

Building operations continue to fall off. In October they were about 70 per cent. of the corresponding month last year. In New York they were somewhat less. New building is restricted more by title companies' and the banks' refusals to lend, than anything else. At least two corporations have been organized in New York to buy up any real bargains in real estate.

Interest in shipbuilding is reviving. An announcement has been made that a \$2,500,000 drydock will be built on the Pacific Coast, the Port River shipbuilding plant at Quincy, Mass., will be enlarged, and there are inquiries in the steel market for about 20,000 tons of plates and shapes which will be required for coastwise vessels and vessels using the Panama Canal. More than three-quarters of a million tons' register of foreign vessels has been transferred to the American flag as a result of recent legislation.

Trading was resumed on the New York Stock Exchange on November 28. This applies to trading in bonds only, and these above a prescribed minimum limit. The Stock Exchange has been closed since July 30. It is interesting to note that about 78 stocks are now selling through the New York Stock Exchange Clearing House at prices above those recorded on July 30.

LABOR

Probably more men are unemployed in the City of New York than ever before in the history of the city, and those conversant with the situation fear there will be more unemployed this winter than ever before. This seems rather improbable. It is evident that business conditions are improving and will shortly take up in a large measure the great horde of unemployed. But this has no effect on labor unions, who continue to make demands for shorter hours and higher wages. A long forgotten law in New York prohibits the employment of any but citizens of the United States on public works. This, unless it is found unconstitutional, will throw out of employment a great number of excavators and other rough laborers, but the unions constantly say that there are 25,000 men in this city, who can do this work, but will be unwilling to work with a pick and shovel, or anything else for that matter, for less than \$3 per day. Immigration is at about one-third of the normal rate. In September the number of aliens who entered this country was less than 30,000. During the first nine months of the year only 610,000 came to the United States, while in the fiscal year ending June 30, 1909, only 751,000 aliens came to the country. It is evident that there will be a thorough cleaning of the immigration law aimed to keep out of this country Europeans who might come as a result of the great war. Wages are practically unchanged at \$1.60 per day.

CEMENT, LIME AND BRICK

Cement.—More than the usual cutting has been going on by the small manufacturers of cement, who are endeavoring to dispose of surplus stocks in the markets of New York and vicinity. These cuts range from 5 to 7½ cents, but no trustworthy evidence is forthcoming that the larger manufacturers have decided to alter their regular quotation of \$1.55 New York. Production is being curtailed, and manufacturers are seeking to avoid the accumulation of any more stocks, during the winter months, than are necessary. There is a general note of optimism, however, and many feel that with the advent of spring conditions will show a material improvement. Prices in the West are unchanged from last month. The quotations given below do not include the charge of 40 cents made for bags, but are for barrels of cement delivered at the points named, in cloth sacks less their charge:

Boston	\$1.32	Chicago	\$1.10
Cleveland	1.25	Detroit	1.14
Duluth	1.23	Jersey City96
Minneapolis	1.30	New York	1.18
Pittsburgh	1.05	St. Paul	1.30

Lime.—Business continues quiet and prices are unchanged; 97c. per barrel for state common, 200 lb. net; \$1.37 for 300 lb. barrel; \$1.55 for 300 lb. finishing; \$1.10 for 200 lb. finishing; and \$1.72 for 350 lb.

Bricks.—Prices are about the same as last month, shipments on the river much restricted. Prices are not so low as would be expected under the circumstances, as \$5.25 is quoted for Hudson River Common.

IRON AND STEEL

Little change is shown in the iron market, compared with last month. While sentiment is more cheerful, actual business booked has not been much larger, and from the coke production, pig-iron output, and the operation at the mills, it can be seen that the steel industry is working at about 30% of its maximum capacity. The orders received by manufacturers in the last month include approximately that figure. It is well to point out at this time, while the orders from foreign nations for munitions of war have been large in point of dollars, they have not affected the steel industry greatly in point of tonnage. Interest is still centered in the outcome of the railway rate case, and it is believed on practically all sides that a new era is dawning, and one in which the blind antagonism of railways and railroads will be at an end. Should the railways be in a position to release orders for immediate improvements, the iron trade would be greatly stimulated.

Pig-iron.—Toward the end of the month the pig-iron market brightened considerably, and sales of foundry grades from the Buffalo furnaces aggregated at least 20,000 tons of this business was taken by small foundries in New England and at the Atlantic Seaboard, but one concern, the American Radiator Co., purchased well over 100,000 tons. The price was attractive and buying resulted in a reduction of 25c. more per ton. Most of the furnaces in that district are now well sold up for the first quarter of 1915, and some of them have considerable business in the second quarter. In the Southern district the following are big business will be in Birmingham. The Steel Corporation has recently sold some foundry iron for delivery in Cincinnati, which includes several attractive lots. Southern Foundry interests are somewhat busier. Some machine tool builders have been exceedingly active. The attractive prices at which pig-iron has been offered have stimulated activity in more than one line.

Quotations for pig-iron in lots of 100 tons or over at the points named are as follows: Cincinnati, Southern Foundry No. 2, \$13.00 to \$13.50; Northern Foundry No. 2, \$14.25 to \$14.75; Northern Foundry No. 3, \$14.00 to \$14.25.

In New York, iron is quoted as follows: No. 2-X Northern Foundry, \$13.75 to \$14.25; No. 2 plain Northern Foundry, \$13.75 to \$14.50; Southern Foundry, delivered tide-water, N. Y., \$14.25 to \$14.50.

In Birmingham, Southern Foundry No. 2 is \$10 to \$10.25. Several sales have been made at the latter figure. In Chicago, Northern Foundry No. 2 is \$12.50 to \$13. In Pittsburgh, Bessemer iron is \$14.70 and basic \$13.35 to \$13.15. This includes the 95-cent freight rate from the Valley to the Pittsburgh District.

Steel Rails—Some business has developed, and the New York Central has put in an order for 25,000 tons, which went to the Lackawanna Steel Co. This is only about 20% of the normal requirement of the road mentioned, but so far no other roads have placed any orders of importance. An inquiry is in the market for 30,000 tons of rails for Norway, but the hopes of getting this order are not great. Quotations for lots of 500 tons or over are unchanged. Standard sections of Bessemer are \$28, and basic \$30. These quotations are per net ton f.o.b. Pittsburgh. Girder rails in 30-ft. lengths are \$36.40 per gross ton, and in 60-ft. lengths \$38.40, both f.o.b. New York. Other quotations f.o.b. Pittsburgh for large lots are as follows: Standard sections, \$1.25; 25- to 45-lb. sections, \$1.15; 16- to 20-lb., \$1.20; 12- to 14-lb., \$1.25; 8- to 12-lb., \$1.30. All of these quotations are per 100 lb. Relaying rails in New York are cheaper at \$19 to \$19.50 per ton.

Structural Shapes—Reports of the Bridge Builders' Society indicate that fabricating shops of the country are operating to about 35% of normal. Railroads are doing practically nothing and there is less building in prospect than a month ago. The mills are operating to about 20% of maximum capacity. Prices are \$1 to \$2 per ton lower than last month, and for large lots at the mill Pittsburgh are as follows:

I-beams 3 to 15 in. channels 3 to 15 in. angles 3 to 6 in. and tees 3 in. and over, 1 lb. Other quotations are as follows: I-beams over 18 in. I-beams over 18 in. channels over 16 in. and angles over 6 in. 1.20c; tees, 1.15c; deck beams and bulb angles, 1.40c; hand-rail tees, 1.85c. Cutting to specified lengths, charging for cut at the following rates: Under 2 ft. to 2 ft. inclusive, 25¢ per 100 lb.; 2 ft. to 1 ft. inclusive, 50¢; less than 1 ft., \$1.55. No charge is made for cutting to specified lengths over 3 ft.

In Chicago the base price is 1.25¢ 1.34c. In New York, 1.26¢ 1.31c. In San Francisco, 2¢ 2.05c.

Plates—Improvement is evident in the demand for plates. It is probable that several boats will shortly be laid down. These will be used in the coastwise trade and also through the Panama Canal. The base price is 1.05c, Pittsburgh. This is for gages 1/4 in. and over; for gages under 1/4 in. to and including 1/8 in., 1.15c is demanded. In Chicago mill deliveries are 1.25¢ 1.30c, and plates from store are 1.65¢ 1.75c. In New York mill shipments are 1.31c.

Pipe—Inquiries for line pipe have been postponed and the mills are operating to only a small ratio of their capacity. Discounts have been revised, making net prices lower. Revised discounts applying to standard lists are as follows:

Black Galvanized		
2- to 2-in. steel, butt welded	\$17	72 1/2%
2 1/2- to 6-in. steel, lap welded	80	72 1/2%
7- to 12-in. steel, lap welded	77	66 1/2%

At these discounts, the net prices of pipe per foot, in large lots, at Pittsburgh are as follows:

Cents		Cents	
Diameter	Black	Diameter	Galvanized
3/4-in.	2.20	3 1/2-in.	29.60
1-in.	2.24	4-in.	38.40
1 1/4-in.	2.28	5-in.	45.60
1 1/2-in.	2.31	6-in.	50.00
2-in.	2.35	8-in.	57.50
2 1/2-in.	2.40	10-in.	79.50
3-in.	2.45	12-in.	95.60
4-in.	2.50	14-in.	115.50

Sheets—Some inquiries have been received for export, the chief one line from Italy. Prices are from \$1 to \$2 per ton less than last month, as follows:

The following quotations are for large lots of sheets in Pittsburgh, and small lots from store, New York.

Cents per Pound			
Large lots		Ware house delivery	
Pittsburgh		New York	
Black	Galv.	Black	Galv.
No. 10	1.55	1.90	2.20
No. 12	1.60	2.00	2.30
No. 14	1.65	2.10	2.40
No. 16	1.65	2.15	2.45
Nos. 18 and 20	1.70	2.20	2.50
Nos. 22 and 24	1.75	2.25	2.55
No. 26	1.80	2.30	2.60
No. 27	1.85	2.35	2.65
No. 28	1.90	2.40	2.70

Cast Iron Pipe—Prices of cast-iron pipe are practically the lowest they have been in a generation, and the great competition among manufacturers of pipe has resulted in considerable business, particularly by those water departments which are well fixed financially. A recent sale of about 4000 tons in the City of Boston brought out the price of \$19.70 delivered, while a reported sale to the Pennsylvania R.R. was made on a basis of \$17 delivered on the property of the company. The following quotations are per net ton at the points named:

Birmingham, Ala., 1- and 6-in., \$19.50.
New York, 1-in. and over, \$20 to \$20.50.
Chicago, 1- to 24-in., \$21.50; 24- to 30-in., \$22.
Cleveland, 1- to 24-in., \$21.50; 24- to 30-in., \$23.
Gas pipe 3- to 4-in. dollar per ton higher in all markets.

Cast Sheet Piling—The market is quiet, but the base price in Pittsburgh is actually unchanged at \$1.55 to \$1.60.

Wire Rope—Revised discounts are 47 and 2 1/2% from list for galvanized and 55 and 2 1/2% for the bright. At these discounts the net price of wire rope at the mills is as follows:

Diameter in inches	Price per foot		
	Cast steel	Crucible steel	Plow steel
2 1/2	\$0.76	\$0.91	\$1.68
2 1/4	0.62	0.73	0.86
2	0.50	0.58	0.68
1 3/4	0.39	0.48	0.56
1 1/2	0.29	0.35	0.40
1 1/4	0.20	0.24	0.28
1	0.14	0.16	0.19
3/4	0.09	0.10	0.11
5/8	0.06	0.07 1/2	0.08

Steel Shapes—Quotations from warehouse, New York, are unchanged from last month as follows:

Refined iron		Cents Per lb.
1 to 1 1/2 in. round and square	1.80	
1 1/2 to 4 in. x 1/4 to 1 in.	1.80	
1 1/2 to 4 in. x 1/4 to 1 in.	2.00	
Norway bars	3.20	
Burdens bar iron	3.15	

Soft steel:		
3/4 to 2 in. round and square	1.80	
1 to 1 1/2 in. x 1/4 to 1 in.	1.80	
1 to 6 in. x 1/4 and 1/2 in.	1.95	
Rods—3/4 and 1 in.	1.90	
Hands—1 1/2 to 6 1/2 in. to No. 8	2.10	
Beams and channels—3 to 15 in.	1.85	

Angles:		
3 in. x 3 1/2 in. and larger	1.85	
3 in. x 3 1/2 in. and 3 in.	2.30	
1 1/2 to 2 1/2 in. x 1/2 in. and thicker	1.95	
1 1/2 to 2 1/2 in. x 1/2 in.	2.05	
1 to 1 1/2 in. x 1/2 in.	2.05	
1 to 1 1/2 in. x 1/4 in.	2.10	
1 1/2 to 2 1/2 in. x 1/4 in.	2.00	
1 1/2 to 2 1/2 in. x 1/2 in.	2.10	
3 in. and larger	1.90	

Old Material—Prices must be near bottom, for it scarcely pays to sort and sort ship some kinds of scrap. In New York prices have declined 25 to 50¢ a ton from last month. Dealers' selling prices are as follows:

	Per Net Ton
Heavy-melting steel scrap	\$7.00 @ 7.25
Pipes and flues	7.00 @ 7.25
No. 1 railroad wrought	8.50 @ 9.00
Store plate	7.25 @ 7.50
Malleable cast	6.50 @ 7.00
No. 1 machinery cast	9.50 @ 10.00
No. 1 yard wrought, long	8.00 @ 8.50
Wrought turnings	5.00 @ 5.50

In Chicago a better feeling is evident, and although quotations are lower than last month, there has been some advance from the prices quoted early in November. Prices are as follows:

Per Gross Ton		Per Net Ton
Heavy-melting steel scrap	\$8.00 @ 8.25	
No. 1 railroad wrought	7.50 @ 7.75	
No. 2 railroad wrought	7.00 @ 7.25	
No. 1 cast scrap	8.50 @ 8.75	
Pipes and flues	5.50 @ 5.75	
Agricultural malleable	7.25 @ 7.50	
Railroad malleable	7.75 @ 8.00	

Pittsburgh markets are exceedingly dull, but there is a better feeling among dealers than a month ago. Quotations per gross ton are as follows:

Heavy-melting steel scrap	\$9.25 @ 9.50
Re-rolling falls	11.50 @ 12.00
No. 1 foundry cast	11.00 @ 12.00
Old car wheels	9.50 @ 10.00
Machine shop turnings	7.50 @ 8.00
Railroad malleable	9.00 @ 9.50

Chain—Prices are steady and without change, as follows: These prices are per 100 lb. f.o.b. Pittsburgh:

1 in.	\$7.50	1/2 and 3/4 in.	\$3.00
1 1/4 in.	1.95	5/8 and 1 1/2 in.	2.50
1 1/2 in.	2.95	1 and 1 1/4 in.	2.70
1 3/4 in.	3.10	1 1/4 and 1 3/4 in.	2.60
2 in.	3.20	1 1/2 to 1 3/4 in.	2.60

EXTRAS TO ABOVE LIST PER 100 POUNDS

3/4 in. and 1 in.	For RB	For HB
1 in. and larger	\$1.50	\$2.00
	1.25	1.75

Freight Rates—The freight rates on finished steel products from the Pittsburgh district, including plates, structural shapes, merchant steel and iron bar, pipe, fittings, plain and galvanized wire, nails, rivets, spikes, and bolts, black sheets (except planished) chains, etc., are as follows in cents per hundred pounds: Albany, 16; Buffalo, 11; Boston, 18; Baltimore, 11 1/2; Canadaigua, 13 1/2; Cleveland, 10; Columbus, 12; Cincinnati, 15; Chicago, 18; Denver, 10; Erie, 8 1/2; Harrisburg, 11 1/2; Louisville, 18; New York, 16; Norfolk, 20; Philadelphia, 15; Rochester, 11 1/2; Richmond, 20; Scranton, 15; St. Louis, 23; Washington, 11 1/2.

Freight Rates via Panama—Rates of freight per 100 lb. in bulk for the ports named to Pacific coast ports are current for shapes, reinforcing bars, plates, wire and similar products:

New York, 25c.; Pittsburgh, 41c.; Youngstown, 43c.; Niles, 43c.; Wheeling, 41c.; Steubenville, 41c.; Johnstown, 35c.; Coatesville, 34c.; Steelton, 35c.; Bethlehem, 32.5c.; Cleveland, 44c.; Chicago, 55c.

Wire—The demand for wire has shown a distinct improvement, due to large orders coming from the nations at war. Prices are as follows: Plain wire, Pittsburgh, is \$1.40 to \$1.45; galvanized wire, Pittsburgh, \$1.80 to \$1.85; painted barbed wire, Pittsburgh, \$1.60 to \$1.65; galvanized barbed wire, Pittsburgh, \$2 to \$2.05; galvanized staples, \$2, and polished staples, \$1.60. All these prices are per hundred pounds for large lots in the Pittsburgh market.

Coke—Prices show a slight improvement. For prompt shipments of furnace coke \$1.50 to \$1.60 per net ton at oven is demanded and for forward shipments, \$1.75. For 72-hr. foundry coke the price is \$1.75 for delivery during the first half of 1915. The output of coke is about 40% of maximum being figured at 206,000 tons weekly in the upper and lower Connelville region the middle of November.

REINFORCING MATERIALS

Bars, Concrete Reinforcing—Prices of bars are fairly steady, but it is probable that an attractive quotation could be obtained for a large lot. Prices are as follows:

Size	Mill Shipments Pittsburgh	Warehouse Pittsburgh	Delivered	
			Warehouse Pittsburgh	New York
3/4-in. and larger.....	1.15	1.60	2.20	
1-in.	1.20	1.75	2.25	
1 1/8-in.	1.25	1.90	2.30	
1 1/2-in.	1.45	2.00	2.40	
1 3/4-in.	1.75	2.25	2.70	

Triangle Mesh—Business is quiet, but prices are without change as follows:

PRICE PER 100 SQ. FT.

Style No.	Cross sec. area per ft. width	Plain material		Galvanized	
		Carload	Less than car lots 10,000 sq. ft.	Carload	Less than car lots 10,000 sq. ft.
*4	\$0.102	\$1.00	\$1.21	\$1.12	\$1.34
5	0.077	0.80	0.97	0.89	1.00
6	0.058	0.63	0.77	0.71	0.84

*43	0.101	1.10	1.34	1.23	1.46

*This material is made in regular widths of 18, 22, 26, 30, 34, 42, 46, 50, 54 and 58 in. Standard lengths in rolls are 150, 250, 300 and 600 ft.

METALS

Copper—Extensive buying by domestic consumers took place early in November, and for ten days or thereabouts, very brisk business resulted. In all transactions were made at a quotation of approximately 12.00c., the lowest price reached for copper since 1908, and the market quickly advanced to 12.50c. cash New York for electrolytic, practically all of this buying was by domestic consumers, but it cannot be said that the ultimate consumption of the metal purchased will be in the United States. It is known that a great deal was bought to fill orders for munitions of war and much of it for shipment to Europe in a partially manufactured state. Large buying has taken place of copper which will be used for locomotive fireboxes, and a great quantity of metal has been purchased for boiler tubes. There has also been considerable copper sheathing purchased. Except for export to Great Britain and neutral countries, there is little foreign business. Vessels sailing for Italian ports refuse to take copper since recent seizures, and the same is true of vessels sailing to Scandinavian and Holland ports. For metals considered directly to neutral governments, there is practically no danger of seizure. Consumption of lake copper is exceedingly large, and stocks are low. The price of electrolytic at the close of the month was 12.50c., and of lake, 12.62 1/2c.

Tin—Speculative factors in the tin market are present in great numbers. The possibility of the closing of the Suez Canal by the Turks is just dangerous enough so that one dealer takes a chance on the metal getting through and another fears the canal will be closed. Speculations across the Pacific and the East are also attended with some risk. For in English prices have advanced in spite of a very poor demand, and the quotation is around 41c. The arrivals during November, including the "Marquies," were figured at 2260 tons—considerably below normal consumption demand.

Lead—The market has shown fair strength, an advance of 34 per ton being announced Nov. 18. This brings the price to 3.90c. New York and 3.77 1/2c. St. Louis. There have

been heavy purchases of lead by manufacturers of ammunition. Then, too, the old prices were below the cost of production.

Spelter—Business is exceedingly quiet, but prices have advanced slightly, and in New York 5.30c. is quoted while in St. Louis 5.15c. is the price.

Antimony—The market is exceedingly irregular, and there is little buying. American manufacturers making shrapnel have use for antimony. Quotations are most irregular, at 17 to 19c. for Cookson's, 15 to 16c. for Balleys', and 13 1/2 to 14 1/2c. for other brands.

Aluminum—Prices have advanced slightly, and No. 1 ingots are now quoted at 19 to 19.50c. New York.

Miscellaneous Metals—Prices are higher, due to a better demand for copper and the scarcity of tin. For small lots in New York, prices are as follows:

Bismuth	\$3.75 to \$4.00
Brass tubes, iron-pipe sizes:	
1/2-in.	16
3/4-in.	15
1-in.	15
1 1/4-in.	16
Brass rods	13 1/2
Brass sheets	15
Solder, half and half guaranteed.....	22
Zinc sheets	9 to 9 1/2
Copper sheets, base	17 1/2
1/2 tin (dye-ton lots, cash)	34

Old Metals—Somehow better prices have been made, due to the advance in virgin metals. The following quotations represent those paid by dealers for old metals in New York:

Copper, heavy and crucible.....	Cents
Copper, heavy and wire.....	10.50
Copper, light and bottoms.....	10.00
Brass, heavy	9.00
Brass, light	7.50
Heavy machine composition	9.25
Composition turnings	8.25
Lead, heavy	3.40
Lead, tea	3.15
Zinc scrap	3.50

CLAY PRODUCTS

Flue Lining—Discounts are unchanged at 8 1/2% from list. At this discount, the net prices per foot for New York delivery are as follows:

Weight	Price	Weight	Price
in lb.	per ft.	in lb.	per ft.
4 1/2 x 8 1/2-in.	24 \$0.06	8 1/2 x 18-in.	45 \$0.152
4 1/2 x 13-in.	19 0.076	13 x 13-in.	45 0.145
7 1/2 x 13-in.	15 0.068	13 x 18-in.	57 0.22
8 1/2 x 12-in.	18 0.076	18 x 18-in.	75 0.34
8 1/2 x 13-in.	28 0.11		

Sewer Pipe—In the smaller sizes, there has been a slight drop in price, 3- to 24-in. being quoted at a discount of 8 1/2%. In the larger sizes, discounts remain unchanged, as follows: 27- and 30-in., 70 1/2, 33- and 36-in., 67 1/2. At these discounts, the net prices per foot in New York are as follows:

Size	Price	Size	Price
3-in.	\$0.015	18-in.	\$0.342
4-in.	0.045	20-in.	0.405

10-in.	0.144	30-in.	1.65
12-in.	0.18	33-in.	2.20
15-in.	0.213	36-in.	2.45

MISCELLANEOUS

Wood Preservatives—Special preservatives for lumber are sold at the following prices per gallon delivered to points in this country: Penth, a flame proof preservative, 80c. per gal.; Creolin, a creosote, flame proof, 45c. per gal.; Marelin, a preservative for marine use, 60c. per gal.

Lighterage Limits—The free delivery or "lighterage limits" in New York City are as follows: In Manhattan, from a point opposite the Fort Lee ferry, south along the Hudson River around the Battery and north along the East and Harlem Rivers to Jerome Ave. Bridge at 16th St. in New Jersey, south from Fort Lee ferry to Bayonne City, points on the north and east shores at Staten Island, between Bridge Creek (Arlington) and Clifton, both inclusive, and including the Hudson and Shooter's Island. In Brooklyn, from 6th St. Bay Ridge, north to Pot Cove, Astoria, Long Island City.

Rubber—Prices of rubber show little change, and the supply seems more than sufficient for present needs. There is no embargo, and rubber is coming into the country in good quantities. Prices are as follows: per pound delivered in New York: Up River Para fine, 71 to 72c.; Up River Para coarse, 51 to 55c.; Cauchoum ball 53 to 55c. Scrap rubber is slightly lower, automobile tires being quoted at 3c. Bicycle tires at 2 to 2 1/2c.; solid tires, at 2c., while autohose hose is 2 1/2 to 3c., and inner tube 16 to 17c.

Railroad Ties—Business is at a standstill and quotations are nominal. Prices are as follows for yellow pine ties 7x9 in. by 8 ft. 6 in., 76c.; 8x9 in. by 8 ft., 64c.

Explosives—Dynamite of the kind generally used by contractors is approximately 11 to 13c. per lb. C. O. B. factory, in ton lots. Blasting powder, as certified as "good" grade, is sold at \$1.20 a 100 per keg of 25 lb. in lots of 10,000 lb.

Exploders, per hundred, are sold at the following prices: 1 ft., \$3.60, 6 ft., \$1.10, 8 ft., \$1.60, 10 ft., \$1.10, 12 ft., \$1.50, 15 ft., \$1.60, 20 ft., \$1.10, 25 ft., \$1.10, 30 ft., \$1.20, 36 ft., \$1.60.

Cables in lots of 10,000 are \$7.00 per thousand. Blasting machines for 10 holes are \$12, 25 holes, \$20; 50 holes, \$10, 100 holes, \$60.

RAILWAYS

West Virginia. Southern Railway & Western R.R.—Plans for the construction of a branch line to the company's coal fields in the Kanawha Valley. The line will be about 10 miles long. Work is being done on the line from Charleston to the Kanawha River.

Mississippi. The Mississippi Valley R.R. Plans are being made for the construction of a branch line from the main line at Memphis to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Memphis to the Gulf of Mexico.

Kentucky. The Kentucky R.R. The company is preparing plans for the construction of a branch line from the main line at Louisville to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Louisville to the Gulf of Mexico.

Illinois. The Illinois R.R. Plans are being made for the construction of a branch line from the main line at Chicago to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Chicago to the Gulf of Mexico.

Indiana. The Indiana R.R. Plans are being made for the construction of a branch line from the main line at Indianapolis to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Indianapolis to the Gulf of Mexico.

Montana. The Montana R.R. Plans are being made for the construction of a branch line from the main line at Helena to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Helena to the Gulf of Mexico.

Arkansas. The Arkansas R.R. Plans are being made for the construction of a branch line from the main line at Little Rock to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Little Rock to the Gulf of Mexico.

Texas. The Texas R.R. Plans are being made for the construction of a branch line from the main line at Dallas to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Dallas to the Gulf of Mexico.

California. The California R.R. Plans are being made for the construction of a branch line from the main line at San Francisco to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from San Francisco to the Gulf of Mexico.

Arizona. The Arizona R.R. Plans are being made for the construction of a branch line from the main line at Phoenix to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Phoenix to the Gulf of Mexico.

New Mexico. The New Mexico R.R. Plans are being made for the construction of a branch line from the main line at Albuquerque to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Albuquerque to the Gulf of Mexico.

Colorado. The Colorado R.R. Plans are being made for the construction of a branch line from the main line at Denver to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Denver to the Gulf of Mexico.

Utah. The Utah R.R. Plans are being made for the construction of a branch line from the main line at Salt Lake City to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Salt Lake City to the Gulf of Mexico.

Idaho. The Idaho R.R. Plans are being made for the construction of a branch line from the main line at Boise to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Boise to the Gulf of Mexico.

Wyoming. The Wyoming R.R. Plans are being made for the construction of a branch line from the main line at Cheyenne to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Cheyenne to the Gulf of Mexico.

Nebraska. The Nebraska R.R. Plans are being made for the construction of a branch line from the main line at Omaha to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Omaha to the Gulf of Mexico.

Kansas. The Kansas R.R. Plans are being made for the construction of a branch line from the main line at Topeka to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Topeka to the Gulf of Mexico.

Oklahoma. The Oklahoma R.R. Plans are being made for the construction of a branch line from the main line at Oklahoma City to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Oklahoma City to the Gulf of Mexico.

Missouri. The Missouri R.R. Plans are being made for the construction of a branch line from the main line at St. Louis to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from St. Louis to the Gulf of Mexico.

Illinois. The Illinois R.R. Plans are being made for the construction of a branch line from the main line at Chicago to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Chicago to the Gulf of Mexico.

Indiana. The Indiana R.R. Plans are being made for the construction of a branch line from the main line at Indianapolis to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Indianapolis to the Gulf of Mexico.

Ohio. The Ohio R.R. Plans are being made for the construction of a branch line from the main line at Cincinnati to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Cincinnati to the Gulf of Mexico.

Pennsylvania. The Pennsylvania R.R. Plans are being made for the construction of a branch line from the main line at Philadelphia to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Philadelphia to the Gulf of Mexico.

Delaware. The Delaware R.R. Plans are being made for the construction of a branch line from the main line at Wilmington to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Wilmington to the Gulf of Mexico.

Maryland. The Maryland R.R. Plans are being made for the construction of a branch line from the main line at Baltimore to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Baltimore to the Gulf of Mexico.

Virginia. The Virginia R.R. Plans are being made for the construction of a branch line from the main line at Richmond to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Richmond to the Gulf of Mexico.

North Carolina. The North Carolina R.R. Plans are being made for the construction of a branch line from the main line at Raleigh to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Raleigh to the Gulf of Mexico.

South Carolina. The South Carolina R.R. Plans are being made for the construction of a branch line from the main line at Charleston to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Charleston to the Gulf of Mexico.

Georgia. The Georgia R.R. Plans are being made for the construction of a branch line from the main line at Atlanta to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Atlanta to the Gulf of Mexico.

Florida. The Florida R.R. Plans are being made for the construction of a branch line from the main line at Jacksonville to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Jacksonville to the Gulf of Mexico.

Alabama. The Alabama R.R. Plans are being made for the construction of a branch line from the main line at Montgomery to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Montgomery to the Gulf of Mexico.

Mississippi. The Mississippi R.R. Plans are being made for the construction of a branch line from the main line at Memphis to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Memphis to the Gulf of Mexico.

Louisiana. The Louisiana R.R. Plans are being made for the construction of a branch line from the main line at New Orleans to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from New Orleans to the Gulf of Mexico.

Arkansas. The Arkansas R.R. Plans are being made for the construction of a branch line from the main line at Little Rock to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Little Rock to the Gulf of Mexico.

Texas. The Texas R.R. Plans are being made for the construction of a branch line from the main line at Dallas to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Dallas to the Gulf of Mexico.

Oklahoma. The Oklahoma R.R. Plans are being made for the construction of a branch line from the main line at Oklahoma City to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Oklahoma City to the Gulf of Mexico.

Nebraska. The Nebraska R.R. Plans are being made for the construction of a branch line from the main line at Omaha to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Omaha to the Gulf of Mexico.

Kansas. The Kansas R.R. Plans are being made for the construction of a branch line from the main line at Topeka to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Topeka to the Gulf of Mexico.

Missouri. The Missouri R.R. Plans are being made for the construction of a branch line from the main line at St. Louis to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from St. Louis to the Gulf of Mexico.

Illinois. The Illinois R.R. Plans are being made for the construction of a branch line from the main line at Chicago to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Chicago to the Gulf of Mexico.

Indiana. The Indiana R.R. Plans are being made for the construction of a branch line from the main line at Indianapolis to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Indianapolis to the Gulf of Mexico.

Ohio. The Ohio R.R. Plans are being made for the construction of a branch line from the main line at Cincinnati to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Cincinnati to the Gulf of Mexico.

Pennsylvania. The Pennsylvania R.R. Plans are being made for the construction of a branch line from the main line at Philadelphia to the Gulf of Mexico. The line will be about 100 miles long. Work is being done on the line from Philadelphia to the Gulf of Mexico.

Milwaukee, Wis. The Milwaukee Electric Ry. & Light Co. has been authorized to consider plans for laying double tracks on its line between Lower Ave. from Hartford and Edgewood Ave. Peter A. J. McGee.

Cedar Rapids, Iowa. The Iowa Ry. & Light Co. has secured the right-of-way and will soon start work on the construction of an electric railway to connect with the lines of the Western Cedar Rapids & Northern Ry. R. S. Cook, Cedar Rapids, is agent.

St. Paul, Minn. The extension of its Dale and Forest St. lines to Grand St. Paul is contemplated by the St. Paul St. Ry. Co.

Garden City, Kan. The Garden City Sugar Co. is preparing plans for the construction of an electric railway from its sugar beet plant to various points in Finney County.

St. Louis, Mo. The United Ry. Co. of St. Louis is considering the construction of a system of loops in the downtown district of the city. Robert McCulloch, St. Louis, is president. McKee and Pur. Act.

Searcy, Ark. The Searcy & Kensett Transportation Co. has been granted a franchise to construct and operate an electric railway between Searcy to Kensett, about four miles. H. E. Hull, Searcy, is interested.

Beaumont, Tex. The Beaumont Traction Co. has been permitted to consider plans for the extension of its line from Beaumont south to the refinery of the Magnolia Petroleum Co. G. W. Kilgore, Beaumont, is mgr.

Huntsville, Utah. Surveys are being made by the Ogden, Logan & Idaho Ry. Co. for the extension of its line from Idlerwood to Huntsville.

Tucson, Ariz. The City Council has granted a franchise to the Tucson Rapid Transit Co. to extend several of its lines in Tucson. Frank E. Russell, Tucson, is gen. mgr.

San Francisco, Calif. Tentative plans are being considered by the City Council for the construction of an electric railway from Keastone to the Hetch Hetchy Valley, about 50 miles. M. M. O'Shaughnessy is City Engr.

LIGHT, HEAT AND POWER

Poughkeepsie, N. Y. The Central Hudson Gas & Electric Co. is planning improvements and extensions to its plant at Poughkeepsie, at an estimated cost of \$125,000. The plans include in 2000-kw. turbo-generator, an electric crane, construction of new substations and extension of transmission lines. F. M. Stark, Poughkeepsie, is Pur. Act.

Syracuse, N. Y. The Commissioners of Onondaga County have selected the plan for a heating plant and ventilating system at the County Tuberculosis Hospital, to the EDWARD ROY CO., Syracuse, at \$76,179.

The Syracuse Lighting Co. has awarded the contract for the construction of a new generating station to the TAYLOR-HORNBY CONSTRUCTION CO., at about \$7600. The building will be 17x25 ft., one story, steel frame.

Holmesburg, Penn. It is reported that plans are being prepared for the installation of a new power plant at the Home for the Indigent, Holmesburg.

Johnstown, Penn. The Dale Light, Heat & Power Co., Johnstown, contemplates building a power plant, estimated to cost \$150,000, at Dale, a suburb of Johnstown. C. F. Lancaster, Johnstown, is agent.

Pittsburgh, Penn. Press reports state that bids are being received by J. G. McGraw, W. J. McGraw, for electrical work at the McNaughton and Latimer Schools.

Harrisville, Md. (Official). The Mayor and City Council have appointed a special committee to investigate the feasibility of installing an electric light plant in connection with the present municipal water works plant. 20 35-kva. or 10 75-kva. units, 60-cycle will be required. J. C. Hawkins is a member of the team.

Bay Minette, Ala. (Official). See item under "Water Supply and Irrigation."

Brick, Tenn. The Edmondson Electric Co. has begun the construction of a second hydro electric plant for the development of the water power of this region. The dam in question crosses the middle fork of the Holston River near Emory, Ala. It is to be 100 ft. high. The machinery will be installed before next spring, and will have a minimum of 15,000 hp with a maximum of 2000 hp.

Greenville, Tenn. See item under "Water Supply and Irrigation."

Paducah, Ky. The Kentucky Southwestern Electric Ry. & Light Co. is considering the construction of a power plant, three substations, a repair shop, car houses, an engine house, a general service pump and equipment for the city of Paducah. The machinery will be installed with a railway from Paducah to Murray, a distance of 35 miles. H. C. Rhodes is president of the company.

Alliance, Ohio. The Building Commission of the new City Hall has awarded the contract for the heating and plumbing of the new building to ELLIS & McLENNAN, Alliance, Ohio. The contract for the electric lighting was awarded to the TAYLOR-HORNBY CONSTRUCTION CO. Alliance, at \$1075.

Cleveland, Ohio (Official). Bids will be received until 12 o'clock, P. M., by the Commission of Purchases and Supplies, City Hall, for a general service pump and equipment for the city of Cleveland. The machinery will be installed with a railway from Cleveland to Light and Heat Dept.

Anderson, Ind. The Board of Public Works has awarded the contract for the construction of a power plant, a generator and other equipment to the WESTINGHOUSE ELECTRIC & MFG. CO., Pittsburgh, Penn., at \$110,000. The contract for the electric lighting was awarded to the TAYLOR-HORNBY CONSTRUCTION CO., Alliance, at \$17,000.

Tekamah, Mich. The City Council has granted a franchise to the Tekamah Traction Co. to install and operate an electric light plant. Tekamah.

ELECTRIC RAILWAYS

South Weymouth, Mass. The Bay State St. Ry. Co. is considering plans for the construction of a new line from Weymouth to the city of Boston. The line will be about 10 miles long. Work is being done on the line from Weymouth to the city of Boston.

New York, N. Y. The Borough of Brooklyn is considering plans for the construction of a new line from the city of New York to the city of Brooklyn. The line will be about 10 miles long. Work is being done on the line from the city of New York to the city of Brooklyn.

Washington, D. C. The District of Columbia is considering plans for the construction of a new line from the city of Washington to the city of Baltimore. The line will be about 10 miles long. Work is being done on the line from the city of Washington to the city of Baltimore.

* Awarded two contracts jointly.	
† Trackage rights also to New York Municipal Railway Corporation.	

Favorable Balance of Trade.—Enormous purchases by European interests and their inability to sell to us is resulting in a large and unusually favorable balance of trade. Figures just compiled by Secretary of Commerce Redfern estimate that there was an excess of exports in November of \$63,188,000. The value of sugar exports in October was \$6,984,929, an increase of \$6,872,111 over October, 1913. Wheat exports were heavily increased, and exports of oats, rye and canned beef, which in normal years are practically nothing, jumped in huge proportion. The value of wheat exports for October was \$4,344,636, against \$1,884,352 in the previous year. It is estimated that in the five months ended November 30 exports of wheat have been 140,000,000 bu., only 5,000,000 less than the exports in the entire year previous ended June 30. Oats exported in October were valued at \$1,492,876, against \$810 the previous year.

Carriages exported from New York were valued at \$1,229,117, nearly ten times the amount for the corresponding month last year. Firearms exports were more than double what they were in October, 1913.

The great demand that is being filled for Europe in this country for war munitions is illustrated in the \$2,239,547 worth of automobile trucks exported, against \$66,010 last year. New York is getting only a part of the exports of these materials, much going from Chicago and Detroit through Canada.

Three aeroplanes went out of New York during the month, against none last year, and 594 motorcycles were shipped, against 168 the year before. Exports of horse-drawn carriages, valued at \$99,145, against \$92,368 the previous year. A great part of the horse shipments are going from

Gulf ports. Freight room here is reported to be scarce, a rate named yesterday being 85¢ against the normal \$25 per horse. The value of drugs doubled, amounting to \$832,588.

Some of the big increases in October exports to neutral countries close to Germany were those to Italy, the value being \$5,168,214, against \$2,258,643 the previous year; Denmark, \$5,641,028, against \$582,618; Norway, \$2,526,416, against \$571,717; Sweden, \$2,915,119. Even Iceland figures in the export trade, taking \$99,888, chiefly in wheat and oil, against \$512 the previous year. There were no direct exports to Germany and Austria.

That the stream is only beginning is evident from the resumption of customs shipments, the further demands for wheat and numerous inquiries for manufactured goods. On Dec. 1 an inquiry was received for 2,000,000 yd. of cloth and an order booked for 500,000 pairs of shoes.

A New Enterprise.—The old dry-goods store of Stern Bros. on West 23d St., New York, N. Y., will be remodelled and used as a public food market to be known as the Cosmopolitan Garden. It will be on the order of the Convent Garden of London, and will contain more than 150 booths on the first and second floors, which will be leased. The estimated cost of the alterations is \$300,000. Starrett & Van Vleet, New York, are the architects.

Company Not to Retire.—Rumors have been circulated to the effect that the Best Mfg. Co., Pittsburgh, Penn., intended retiring from the plating business. The company wishes to emphatically deny these rumors and assure the trade which has known the Best Mfg. Co. for over 30 years that it is now, and intends to continue, in the plating business.

Contracts to Be Let

Bids received until Dec. 22, 1914.

Barge Canal Work

STATE OF NEW YORK

OFFICE OF SUPERINTENDENT OF PUBLIC WORKS.

Albany, November 25th, 1914.

Sealed proposals will be received by the undersigned at his office, 50th Street at Albany, N. Y., until twelve o'clock noon of Tuesday, December 1st, 1914, at which place and hour they will be publicly opened and read, for improving the Cayuga and Seneca canal pursuant to the provisions of Chapter 141 of the Laws of 1909 and Chapter 147 of the Laws of 1902 and of the amendments thereto as follows:

1. CONTRACT NO. 1.

Cayuga and Seneca Canal, Section 1.

For the removal of buildings, etc., at Seneca Falls, N. Y. Sheet 1.

And for the construction of Barge Canal terminals pursuant to the provisions of Chapter 146 of the Laws of 1911, and of the amendments thereto, as follows:

2. TERMINAL, CONTRACT NO. 13.

For constructing a guard-lock, highway bridge and cut-off dam at Schuylerville.

Contract plans, sheets 1 to 12, inclusive.

Plans may be seen and detailed specifications, engineer's estimate of quantities, proposal blanks, form of contract and bonds required and other information for proposers may be had at the office of the Superintendent of Public Works at Albany, N. Y., at the office of the Assistant Superintendent of Public Works for the Middle Division at Syracuse, N. Y.; at the office of the Assistant Superintendent of Public Works for the Western Division at Rochester, N. Y., and at the canal office, Spaulding Exchange Building, Buffalo, N. Y.

Copies of detailed plans or drawings may be obtained from the State Engineer and Surveyor at Albany, N. Y., upon payment to him of the cost of producing them.

On the terminal contract monthly estimates will be paid of ninety per centum (90 per cent) of the work done at the contract price. Every proposal for said work must be accompanied by a money deposit in the form of a draft or certified check upon some good banking institution in the city of Albany or New York, issued by a national or state bank or trust company in the case of terminal contract, in good credit with the State, and payable at sight to the Superintendent of Public Works for five per centum (5 per cent) of the amount of the proposal, except in the case of Contract No. 2, where a deposit of \$10,000 will be required.

The person whose proposal shall be accepted will be required to execute a contract and furnish bonds within ten days from the date of acceptance of award delivered to him or them in person or by mail to the address given in the proposal.

Upon execution of the contract and approval of bonds, the original bond or bonds will be returned to the proposer unless the same shall have been presented for collection prior to such time, in which case the amount of the deposit will be refunded by the Superintendent of Public Works.

The deposit of the money other than the one to whom the award of contract is made will be returned immediately after the award has been made.

In the case of terminal contract the amount of bond required for the first six months will be ten per centum (10 per cent) of the estimated cost of the work, and the amount of the bond for the estimated cost of the work for the remaining six months will be ten per centum (10 per cent) of the amount of the estimated cost of the work remaining to be done. The bond for the first six months will be \$10,000.00 and a labor bond of \$10,000.00 will be required.

In the event that more than one proposal is offered as aforesaid on said bonds, the person or persons accepted. Each proposal must be addressed to the Superintendent of Public Works Albany, N. Y., and be placed in the envelope with the name of the contractor, in which the proposal is made.

Award, if made, will be made to the person or persons whose proposal shall be lowest in cost to the State for doing the work, and which shall comply with all provisions required to render it formal. Before any award shall be made the lowest bidder will be required to satisfy the Superintendent of Public Works of his ability to provide suitable equipment and materials for the proper performance of the work.

The right is reserved to reject all proposals and readvertise and award the contract in the regular manner if, in the judgment of the undersigned the interests of the State will be enhanced thereby.

DUNCAN W. PECK,

Superintendent of Public Works.

Bids received until Dec. 9, 1914.

Somers Point-Longport Boulevard

Atlantic City, N. J.

Sealed bids will be received by the Board of Chosen Freeholders of Atlantic County, N. J., at Twelve o'clock, noon, December 9th, 1914, in Memorial Hall, Atlantic City, N. J., for the improvement of the Somers Point-Longport Boulevard, Atlantic County, N. J.

Said boulevard to be 111 miles long, graveled to the width of 60 feet. Contract will include furnishing in place 48 inch cross drains with concrete head walls, building small cross-roads timber pile bridges, and furnishing in place cross-roads timber bulkheads.

Plans and specifications may be seen at the office of the Engineer for Atlantic County at No. 636 Bartlett Building, Atlantic City, and copies may be had for a deposit of \$5.00 for each set of plans and specifications. Such deposit will be returned if plans and specifications are returned in good condition by noon December 10th, 1914.

A cash check to the amount of \$1000 will be required of each bidder and a bond in the full amount of the contract will be required of the contractor.

The right is reserved to reject any or all bids.

GEORGE B. JEFFERS,
Chairman Road Committee.
V. H. NELSON,
Engineer for Atlantic County.

Bids received until Dec. 10, 1914.

Highway Work

OFFICE OF THE STATE COMMISSION OF HIGHWAYS.

Albany, New York, Nov. 18, 1914.

Sealed proposals will be received by the undersigned at their office, No. 101 Lancaster Street, Albany, N. Y., at 1 o'clock p.m. To-wit: December 10th, 1914, for the improvement of highways in the following counties:

Albany (approx. length 3.29 miles), Cayuga County (4.58); Columbia County (1.18); Erie (1.47); Jefferson (1.88); Madison (0.15); Monroe (1.11); Orange (1.27); Orleans (8.91); Oswego (1.79); Yates (0.74); Saratoga (1.73); Steuben (4.27); Schoharie (0.65); Warren (0.41); Washington (1.22); Westchester (1.43).

Plans, specifications and estimates may be seen and proposals may be obtained at the office of the Commission in Albany, New York, and also at the office of the Division Engineer in whose Division the road is to be constructed. The addresses of the Division Engineers and the counties in which they are in charge will be furnished on request.

The special attention of bidders is called to the "Information" which is in the itemized proposal, specifications and contract agreement.

The right is reserved to reject any or all bids.

JOHN N. CARLISLE, Commissioner.
R. K. FLETCHER, Secretary.

Construction News

*Denotes work advertised in ENGINEERING NEWS.

+Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

Building Operations Drastically Curtailed

Country-wide reports show a severe reduction in contemplated construction. It is more noticeable this month than any time since the war began. In Philadelphia the returns were the smallest for any November since 1907. In Detroit operations fell below \$1,000,000 for the first time in several years. In New York despite the unsatisfactory operations last year—the smallest since 1903—it is probable that 1914 will make a new low record since that year. In Hoboken, N. J.—perhaps more adversely affected by the war than any other American city—the contemplated buildings only amounted to \$1650, and in August, \$2727. Reports from Milwaukee state that much work is postponed until spring. The loss since the war began has been progressive except where influenced by local conditions in October—for a loss of 4% was reported in the combined return of 52 cities in August; 37% in 55 cities in September; 17% in 55 cities in October, and 29% in 52 cities last month.

In 19 Eastern cities there was a falling off of 33% in November, but for the 11 months the decrease was only 1%.

Cities in the Southern States have had to contend with the lack of funds due to the inability to sell cotton. In seven cities there was a falling off of 52% for the month and 15% for the 11 months.

The Middle West shows a decrease of 15% in 21 cities, but for the period January to December there has been a small gain.

Chicago is the conspicuous example of a large city where a gain is shown. In most of the large cities the falling off has been greater in proportion than in cities of less than half a million population. A comparison with the corresponding month in 1912 would be far more unfavorable, for a slump was well under way this time last year.

On the Pacific coast conditions are not so bad, according to the reports, a loss of 14% being shown in seven cities, but in October there was a loss of more than 20%.

The following table shows the contemplated building operations from plans filed during November. A comparison is made with the corresponding month last year. Figures are also given showing operations proposed in the 11 months of the two years mentioned.

RELIEF WORK IN PITTSBURGH

The City Council, Pittsburgh, Penn., on Nov. 23, appropriated \$80,000 to provide 40,000 days' work at \$2 per day, work to be started immediately on two public improvements, the Woodland Avenue Extension and the River View Park Boulevard widening. All police stations in the city have been turned into relief stations, and clearing houses for the collection and distribution of foodstuffs and supplies. Pittsburgh has been more seriously hit by the present hard times than in the panic of 1907. The mills of the Steel Corporation are running about 35% of capacity, and the Jones & Laughlin Co., 24%. Car builders are practically out of work, and more than 2000 miners are unemployed and have been unemployed for several weeks. The police department, besides providing lodging for the homeless men, is furnishing hot coffee and bread at breakfast time each day. Instead of laying off men as is usual at this time of the year in the Park and Sewer Department, the city is adding to the number of employees. The County Commissioners at a meeting last week decided to continue county road work throughout the winter if possible, at least to not stop any job definitely but continue until work is made impossible by the severity of temperature.

The Koehring Machine Co., Milwaukee, Wis., has taken over the Dennis Traction Grader & Loader Co., and will proceed to manufacture and place the Dennis traction grader and loader on the market.

Engineering Sales Co., 114 Liberty St., New York, has recently been organized by Edwin H. Johnson and Richard H. Franken. The new company will represent a number of out of town manufacturers interested in sheet-metal work and general wrought-iron work.

CATALOG NOTICES

The Hitchcock Mfg. Co., Tarentum, Penn. Catalog. Turnouts, switches, frogs. Illustrated, 38 pp., 6x9 in.

The Continental Fibre Co., Newark, Del. Catalog. Vulcanized fibre, Bakelite-Dibac, Continental-Bakelite. 46 pp., 5x8 1/2 in.

The Sell & Smith Electric Tool Co., Cincinnati, O. Catalog No. 4. Portable electric drills, buffers, grinders, screwdrivers, etc. Illustrated, 56 pp., 6x9 in.

The Connersville Blower Co., Connersville, Ind. Catalog. Cycloidal pumps. Illustrated, 48 pp., 9x12 in.

The Watson-Stillman Co., Aldene, N. J. Booklet. Kromax leather packings. Illustrated, 16 pp., 3 1/2 x 6 in.

tional unit at the Cedar Falls power plant, to cost about \$500,000. The plans provide for a third power water main from the new masonry dam and power plant at Cedar Falls, a new building and equipment to increase the capacity of the Cedar River system by 10,000 kw.

Helix, Cal.—The syndicate, headed by the Freuler & Dyer Engineering Co., Walla Walla, Wash., will establish an electric light plant in Helix. The initial unit will consist of a 22-hp. crude oil engine to drive a 20-hp. generator. The plant will be so constructed that additional units may be installed.

Santa Maria, Calif.—The Santa Maria Gas & Power Co. will extend its gas-distributing system from Arroyo Grande to San Luis Obispo, a distance of ten miles.

Newmarket, N. B.—An election will be held, Jan. 4, for the purpose of voting on the question of issuing \$15,000 in bonds, to be used for the construction of a new substation.

Shawinigan Falls, Que.—The Shawinigan Water & Power Co., 607 Power Bldg., Montreal, Que., has had plans prepared for the construction of a transmission line extending from Shawinigan Falls to the city of Quebec. Julian C. Smith, Montreal, is Gen. Supt. and Ch. Engr.

Delaware, Ont.—The Village Council is considering the construction of a municipal electric power plant to supply energy for light, heat and power.

Dresden, Ont.—(Official)—No bids will be asked for the construction of the new municipal hydro-electric lighting system, as the work is being done by local forces. J. T. Bridgewater is Town Clk. Noted July 30 and Nov. 26.

Mount Brydges, Ont.—At an election on Nov. 23, the citizens passed a bylaw for securing electricity for general purposes from the Hydro-Electric Power Commission.

Shelburne, Ont.—The rate-payers have approved a bylaw providing for securing energy from the Hydro-Electric Power Commission of Ontario.

Toronto, Ont.—Bids will be received until Dec. 11, by the Toronto Board of Education, for power equipment for the new Central Technical School, including steam engines, generators, switchboard, steam-piping and electrical connections. The Canadian Domestic Engineering Co., Ltd., 47-51 King St., West, Toronto, is Engr. in Charge.

Regina, Sask.—It is reported that the City Council plans to purchase, early next year, a quantity of new equipment for the municipal power plant. E. W. Hull is Mgr. of the plant.

BRIDGES

Concord, N. H.—(Official)—Bids will be received until 5 p.m., Dec. 15, by W. B. Howe, City Engr., for the construction of a 470-ft. bridge over the Merrimack River. Noted Nov. 19 and Dec. 2.

Lawrence, Mass.—The Massachusetts Harbor and Lands Commission has approved the plans for the Central Bridge over the Merrimack River at Lawrence, and construction work will be started at once. The contract for this bridge was awarded last May to Ryan & Keon, Boston, at about \$322,000. Noted May 25 and May 28.

Hartford, Conn.—Bids were received Nov. 30, by Charles J. Bennett, State Highway Comr., for bridge construction as follows: Old Lyme Township, removing an old bridge to new location, constructing wing walls, abutments and approaches and painting the bridge, Connecticut Good Roads & Construction Co., No. 320; B. F. Toomey, South Norwalk, \$7542; Daly & Merritt, Portchester, N. Y., \$12,873; Jobson-Gifford Co., 30 East 42d St., New York, N. Y., \$11,147; New England Contracting Co., Worcester, Mass., \$10,618; B. D. Pierce, Jr., Corp., \$12,017. Noted Nov. 19.

For the construction of a 30-ft. I-beam bridge in Stonington Township, bids were received from: Daly & Merritt, \$7531; C. W. Blakeslee & Sons, New Haven, \$5669; Edmund F. Wall, Torrington, \$662; William J. Mertz, Portchester, N. Y., \$6060; Louis Longhi & Bro., Torrington, \$5581; C. W. Tryon, Meriden, \$6994; Kellogg & Gregory Co., Danbury, \$6795; Connecticut Good Roads & Construction Co., \$6929; B. D. Pierce, Jr., Corp., \$12,017; O'Brien Construction Co., Grand Central Terminal, New York, N. Y., \$6314.

Petersen, N. J.—The Board of Chosen Freeholders of Passaic County will build a new bridge over the Passaic River to Totowa, provided the city will construct the approaches. Colin R. Wise is City Engr.

Trenton, N. J.—The Pennsylvania R.R. has submitted plans to the City Engineer for new lift bridges to replace its present structures over the canal at Hamilton and Greenwood Aves. Frank Thompson is City Clk.

Mauch Chunk, Penn.—The Board of Commissioners of Carbon County is having plans prepared by William Tomblor, County Engr., for the construction of a reinforced concrete bridge.

Pittsburgh, Penn.—(Official)—Bids will be received until 10 a.m., Dec. 21, by the Department of Public Works for the construction of the steel superstructure of the St. Ryan Ave. Bridge. Joseph G. Armstrong is Mayor. Robert Swan is Dir. Dept. of Pub. Wks.

Pittsburgh, Penn.—(Official)—The Commissioners of Allegheny County have awarded the contract for the construction of Bridge No. 19, over Pine Creek, Shaler Township, to the CITY CENTRAL CON. Co., Fulton Bldg., Pittsburgh, at \$18,100. Noted Nov. 26.

Bradentown, Fla.—(Official)—Bids will be received until 7 p.m., Dec. 11, by W. H. Tracy, Comr. of Public Works, for the construction of a Scherzer rolling lift bridge.

Jacksonville, Fla.—Bids will be received until Dec. 11, by the Committee on Public Works of the Board of Bond Trustees for the construction of a reinforced concrete bridge over the Suwannee River at St. Cloud. The cost must not exceed \$4000. S. C. Harrison, Jr., is Chn. of the Com.

Birmingham, Ala.—The Jefferson County Board of Revenue has instructed the Highway Engineer to locate a bridge over

the Cahaba River on the proposed road from Irondale to Leeds. J. W. Gwin is Highway Engr.

Eufaula, Ala.—The Board of Revenue of Barbour County, Clayton, plans to build a reinforced concrete bridge over Barbour Creek on the National Highway, about two miles from Eufaula. The estimated cost is \$2000, of which half will be paid by the county, and the other half by state aid.

Crowley, La.—(Official)—The Police Jury of Acadia Parish has awarded the contract for the construction of two steel bridges, with concrete abutments, timber and earth approaches, to C. S. JACKSON & CO., LTD., New Iberia, La., at \$15,500. Other bidders were: Austin Iron Works, Tex., \$21,500; Blodgett Construction Co., Galveston, Tex., \$19,912; Vincennes Bridge Co., Vincennes, Ind., \$12,888, for bridge work only, no earthwork; Perry & Bowmes, Mobile, Ala., \$24,000; Emory Construction Co., Hattiesburg, Miss., \$22,497. Noted Nov. 5.

Lake Charles, La.—The Police Jury of Calcasieu Parish has authorized an issue of \$300,000 in bonds for the purpose of building a bridge over the Calcasieu River at this point, and repairing sections of the public highway. Plans are being prepared for a bridge to cost approximately \$200,000. E. C. House is Clk. of the Police Jury. Noted Oct. 15.

New Orleans, La.—The Louisiana Motor League and the engineers of Orleans and St. Tammany Parishes are considering the construction of a steel bridge over Lake de la Charade, across the Chef Menteur and Rigolets Bayou, as a part of the coastal highway from New Orleans to Pass Christian and other gulf coast resorts. An amendment has recently been passed appropriating \$100,000 for the purchase of licenses to the state road fund for building and maintenance.

Knoxville, Tenn.—John W. Flenniken, Comr., has recommended to the Board of City Commissioners the construction of a reinforced concrete viaduct on Gay St. over the tracks of the Southern Ry. to replace the present steel arch bridge structure. If the bridge is built, the expense will be divided among the city, the Southern Ry. and the Knoxville Ry. & Light Co.; the tracks of the latter are on the bridge.

Akron, Ohio.—C. F. Parker, Dir. of Pub. Ser., has approved plans for a Furnace St. bridge, to be built jointly by the Baltimore & Ohio R.R. Co. and the city. The estimated cost is \$10,000. J. A. Gehres is City Engr.

Cincinnati, Ohio.—(Official)—Preliminary plans have been submitted to the City Council for the proposed reinforced concrete ornamental bridge over the Ohio River, at the Ave. entrance to Eden Park. The bridge will be an span of about 180 ft., with a 40-ft. roadway and two 12½-ft. sidewalks. The estimated cost, including street improvements, is about \$100,000. It has been appropriated and will be made, so that the work can be advertised next spring. S. Strug is Ch. Engr. of the Dept. of Pub. Ser., Frank L. Raschig is Prin. Asst. Engr. of the Div. of Structures. Noted Nov. 26.

Columbus, Ohio.—(Official)—Bids will be received until noon, Dec. 26, by the Board of Commissioners of Franklin County for constructing a bridge under Engineer's Estimates No. 146 and 149, to H. E. BARTMAN, Columbus, \$10,000; JEWETT, Worthington, Ohio, respectively. Noted Nov. 12.

Freemont, Ohio.—Revised plans have been prepared for the Tindall Bridge over the Sandusky River, Ballville Township, and bids for its construction will soon be asked. The bridge will be about 100 ft. long. William F. Scheplin is County Engr. Noted Aug. 27 and Oct. 1.

Hamilton, Ohio.—The Board of Commissioners of Butler County has awarded the contract for the construction of a reinforced concrete bridge over the Miami River at Woodsdale to A. J. YAWGER & CO., Indianapolis, Ind., at \$84,460. List of bidders noted Aug. 13.

Toledo, Ohio.—The Public Improvements Committee of the City Council is considering the construction of a creosoted steel bridge over the Sandusky River. The estimated cost of the work is approximately \$35,000. Herbert McKechnie is City Engr.

Greensburg, Ind.—(Official)—Bids will be received until 1 p.m., Dec. 14, by the Board of Commissioners of Decatur County for the construction of three bridges in Sandcreek Township, and one each in Jackson, Marion and Saltcreek Townships. Linton W. Sands is County Audr.

Lansing, Mich.—(Official)—The State Highway Commission has awarded the contract for a 130-ft. steel bridge over the Tittabawassee River, Jerome Township, Midland County, to the CENTRAL STATES BRIDGE CO., Indianapolis, Ind., at \$2.60 per 100 lb. for the steel, f.o.b. Sanford, Mich., and \$785 for erection and painting. Noted Nov. 12.

Alton, Ill.—(Official)—At a special election held Nov. 28, the bond issues of \$55,000 for the construction of a viaduct over Seventh St. and \$15,000 to build a fire station in Upper Alton were defeated. B. L. Kennedy is City Clk. Noted Nov. 19.

Danville, Ill.—(Official)—Bids will be received until 7:30 p.m., Dec. 15, by the City Council for the construction of a reinforced concrete bridge over the North Fork of the Vermillion River at Bridge St. The structure will be about 100 ft. long, to be built on concrete foundations to the amount of \$80,000. Bids will be received until 10 a.m., Dec. 15, for the building of this bridge. W. H. Martin is City Engr. Noted Sept. 24, Oct. 8, and Nov. 12.

Jacksonville, Ill.—The Directors of Road District No. 6, Morgan County, have awarded the contract for the construction of a steel bridge over the Illinois River at St. Louis, leading to the County Home, to the ILLINOIS STEEL BRIDGE CO.

Appleton, Wis.—Press reports state that the Chicago & Northwestern Ry. plans to build a new railway bridge over the Fox River at a point just east of the John St. Bridge. It is designed to place the place of the present bridge east of the Lawe St. Bridge. W. H. Finley, Chicago, Ill., is Ch. Engr.

Evansville, Ind., (Official)—Bids will be received until 10 a. m., Dec. 24, by the Board of County Commissioners for installing an electric pumping system at the Vanderburg County Poor Farm. C. P. Beard is Audr.

Mishawaka, Ind.—Bids will be received until Dec. 14, by the Board of Works, for constructing a 4,000,000-gal. horizontal, corliss, steam-compound, opposed type, crank and fly-wheel pumping engine. A. R. Klein is Supt. of Water Wks.

Terre Haute, Ind.—The installation of a low-service pump is contemplated in 1915 by the Terre Haute Water-Works Co. Dow R. Gwinn is Pres. Noted May 28.

Ann Arbor, Mich.—The city plans to construct one mile of 16- and 20-in. water main and install a 3,000,000-gal. centrifugal pump and a filtration plant. George S. Vanawarker is Mgr.

Leland, Ill.—The contract has been awarded to MONTE & DUNBAR, St. Louis, Mo., at \$9664 for installing a water system. Noted Sept. 9.

Louisville, Ill.—The installation of a new pump at the municipal water-works is contemplated. H. S. Stanford is Supt.

Spartan, Ill.—The city has retained W. M. K. Brown, 300 Cahokia Bldg., East St. Louis, to prepare plans for the construction of a water system. Noted Dec. 3.

Carthage, Wis.—The city plans to construct six subsurface wells and install two Deane power pumps, one Worthington duplex compound steam pump and motor driven centrifugal pumps. H. E. Frueh is City Engr. The estimated cost is \$135,000.

Portage, Wis.—The installation of a new filtration plant and steam boilers is contemplated at the water-works. George E. James is Supt.

Burlington, Iowa.—The citizens contemplate spending \$10,000 for the water system.

Ottumwa, Iowa.—Bids will be received until Dec. 18, by the Board of Water-Works Trustees, for constructing concrete dams. Horace A. Brown is Supt. of Water Wks.

Duluth, Minn.—Bids will be received by the Water and Light Department until 11 a. m., Dec. 12, for laying water and gas mains. C. S. Palmer is City Clk.

Douglas, Kan.—The contract for constructing a water system has been awarded to O'NEIL CONSTRUCTION CO., Leavenworth, Kan., at \$10,295. A. C. Moore, Joplin, Mo., is Engr. Noted Nov. 19.

Emporia, Kan.—The city contemplates laying a number of miles of pipe, installing a filtration plant and constructing three dams. W. J. Reynolds is Supt.

Wellington, Kan.—Bids will be received until Dec. 15, by the City Council, for equipment for the municipal water and light plant and substation at Mayfield Wells. The Benham Engineering Co., American National Bank Bldg., Oklahoma City, Okla., is the Engr. Noted Dec. 3.

Plainview, Neb.—The city plans to lay one mile of 4-in. water mains and install a 20,000-gal. pressure tank. O. A. Curtis is Supt. of Water Wks.

Spearfish, S. D.—The city contemplates installing water meters throughout the city. J. T. L. Henry is Supt. of Water Wks.

Billings, Mont.—The election proposed for Dec. 1 was rejected and bids will be received, as before stated, on Dec. 29 for the purchase of \$450,000 in bonds, the proceeds of which will be used for the construction of a water system. Noted Nov. 12.

Macou, Mo.—The city contemplates installing a filtration plant in 1915. C. F. Thudium is Supt. of Water Wks.

Ft. Worth, Tex.—The city contemplates installing a filtration and water softening plant at the municipal water works. F. J. Von Zuben is City Engr.

Sweetwater, Tex.—According to press reports bids are being received by the City Council for 35,000 ft. of 12-in. water main, 6000 ft. of 16-in. main, 1700 ft. of 8-in. main, 26,000 ft. of 6-in. main and 23,000 ft. of 4-in. c-i pipe.

McAlester, Okla.—The city has a plan whereby the water of Wild Horse Creek will be brought into the present reservoirs. F. S. Pittman is Supt. of Water Wks.

Idaho, Idaho.—At a recent election the citizens voted in favor of issuing bonds for \$35,000, the proceeds of which will be used for the purchase and improvement of the water system. Noted Sept. 10.

Enghanta, Wash.—The citizens contemplate issuing bonds for \$19,000, the proceeds to be used for the construction of a water system.

Everett, Wash.—Burns & McDonnell, Kansas City, Mo., have been retained by the city to prepare plans for the improvement of the water system.

Kirkland, Wash.—The city has won the condemnation case to secure the springs south of Kirkland for a water supply. Bids for the installation of a water system will soon be received. Noted June 19.

Seattle, Wash.—D. H. Traphagen, Artie Club, was low bidder, at \$28,982, for laying water mains in 38th Ave., S. W. Noted Nov. 12.

Tonasket, Wash.—The contract has been awarded to G. D. MACY, by the Bonaparte Land Co., Tonasket, for laying about 4000 ft. of water mains.

Ashland, Ore.—Bonds have been voted, the proceeds of which will be used for the improvement and extension of the water and light systems. Noted Dec. 3.

Oregon City, Ore.—Bids were opened Nov. 28, by the South Fork Water Commission for a gravity water system. The low bidders are as follows: Pacific Bridge Co., Portland, wood-pipe construction, \$209,770; open reservoir, \$31,224; lap-welded pipe, \$338,117; covered reservoir, \$78,775; P. E. McIlhenny, Tacoma, wood-pipe, \$719,034; open reservoir, \$47,871; lap-welded pipe, no bid; covered reservoir, \$92,817; consolidated

Contract Co., Portland, wood pipe construction, \$221,100; open reservoir, \$43,922; lap-welded pipe, none; covered reservoir, none; Boyne-John Arnold Co., Panama Bldg., Portland, wood-pipe construction, \$241,996; open reservoir, \$42,550; lap-welded pipe, \$407,471; covered reservoir, \$77,298. Noted Nov. 26.

Turner, Ore.—The contract has been awarded to DENNIS CONSTRUCTION CO., Portland, for the construction of a water system. Noted Apr. 30.

Imperial, Calif.—The contract for constructing a wood flume across the New River has been awarded to MERCE-REAU BRIDGE & CONSTRUCTION CO., Pacific Electric Bldg., Los Angeles, at \$33,858. Noted Oct. 8.

Sao Diego, Calif.—The contract for installing a filtration plant has been awarded to CALIFORNIA JEWELL FILTER PLANT CO., at \$52,953. Noted Nov. 26.

Somis, Calif.—The Pleasant Valley Lemon Co. will construct a pipe line four miles long and an irrigation system, estimated to cost \$100,000, and a cement distributing system, costing \$50,000. A. C. Hardison is Dir. Engr.

Quebec, Que.—According to press reports the water system will be extended at an estimated cost of \$120,000. T. A. Forrester is Engr.

Cochrane, Alta.—The citizens contemplate installing a water system in 1915. J. E. Laird is Secy.-Treas.

Frankbrook, B. C.—Bids will soon be received by the City Clerk for valves and hydrants.

New Westminster, B. C.—Preliminary plans are under way for the construction of a reservoir, with a capacity of 5,000,000 gal., by day labor.

SEWERS

Boston, Mass.—The contract for the reconstruction of old sewers in the Congress Street Water St. has been awarded to W. BARRETT & CO., at \$47,707. Other bids were: Merriman Construction Co., \$48,967; McCarthy & Walsh, \$51,130; Charles E. Gow Co., \$51,851; West Roxbury Trap Rock Co., \$52,043; Antony Baruffaldi, \$53,661; Coleman Bros., \$54,402; Northern Construction Co., \$56,701; William J. Barry, \$58,850; George M. Byrne, \$60,137; Hugh Nawn Contracting Co., \$65,078; James Driscoll & Sons Co., Brookline, \$65,847; Bruno & Pettiti, \$66,102; Anthony Cefalo, \$67,287; M. Russo & Sons Co., \$80,202. Noted Nov. 12.

Bids will be received until Dec. 11, by the Public Works Department for constructing sewers in Freeport St. and Melville Terrace, Dorchester District. L. K. Rourke is Comr.

Buffalo, N. Y.—The City Council has authorized the construction of 24-, 20-, 18- and 15-in. tile sewers in Woodside Ave. and Potters Rd. between Abbott Rd. and Niantic St., and in Heath and Angle Sts. Francis G. Ward is Dir. of Pub. Ser.

Fredonia, N. Y.—The Board of Village Trustees will build a sewage disposal plant at Temple St. and Canaday Creek. Plans are being prepared by Frederick Wing, White Bldg., Buffalo.

Great Neck, N. Y.—Plans are being prepared by Watson Engineering Co., 38 West 32d St., New York, for the installation of a sewer system and sewage-disposal plant at Great Neck. The estimated cost is \$150,000.

Searsdale, N. Y.—The contract for constructing the Morris Lane extension sewer has been awarded to FRANK GEORGE, White Plains, N. Y., at \$5008.

Nappington, Falls, N. Y.—(Official)—The contract for constructing a sewer system has been awarded to SAMUEL BESKIN, Beacon, N. Y., at \$69,051. List of bidders noted Dec. 3.

Bristol, N. J.—The State Board of Health has ordered the installation of a sewer system, including house connections.

Perth Amboy, N. J.—The Board of Aldermen plans to establish a public park in upper Smith St. The initial work in connection with the improvement will comprise 1000 ft. of storm sewer, estimated to cost \$7000, a 3000-ft. driveway, estimated to cost \$6000, and 3600 ft. of fencing.

Trenton, N. J.—The Board of City Commissioners has authorized the construction of Sewer No. 608 in Lyndale Ave. Frank Thompson is City Clk.

Bradford, Penn.—Plans are being prepared by R. A. Wise, City Engr. for constructing an Imhoff tank, a sewage pumping plant and intercepting sewers.

Eric, Penn.—William L. D'Olier, Philadelphia, Engr., has been retained by the Board of Supervisors, Supt. of Streets, to prepare plans for a sewage-disposal plant.

Oaklyn, Penn.—According to press reports bids will soon be received for constructing a sewer system at an estimated cost of \$50,000.

Arlington, Md.—The County Commissioners of Baltimore County, Md., are conferring with E. B. Whitman, Engr., 1319 Fidelity Bldg., Baltimore, in connection with the construction of a sewage disposal plant at Arlington.

Albany, Ga.—The citizens contemplate issuing bonds, the proceeds of which will be used for the installation of sewer and water systems and for street paving. H. A. Tarver is Mayor.

Pensacola, Fla.—The construction of storm sewers in Brue, Palafox and Romana St. is contemplated by the city. The estimated cost is \$18,000. L. Earl Thornton is City Engr.

Gallatin, Tenn.—The city plans to construct a sewer system in the business district.

Ashmuh, Ohio.—(Official)—Bids will be received by M. H. Turner, Dir. of Pub. Ser., until noon, Dec. 12, for constructing sewers in Jefferson and Thornton Sts.

Canton, Ohio.—The contract for constructing the main sewer to the new sewage disposal plant has been awarded to JOHN F. CAREY, Oliver Bldg., Pittsburgh, Penn., at \$169,000. Noted Nov. 5.

Cleveland, Ohio.—Bids will be received by the Commissioner of Purchases and Supplies, Room 618, City Hall, until noon, Dec. 17, for constructing sewers in a number of streets. Robert Hoffman is City Engr.

Perth Amboy, N. J.—See item under "Water Supply and Irrigation."

Construction News

*Denotes work advertised in ENGINEERING NEWS.

†Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

RAILWAYS

†**New Jersey**—Pennsylvania R.R.—This company has awarded a contract for grading and track work at Camden, N. J., to the JAMES MCGRAW CO., Commercial Trust Bldg., Philadelphia, Penn.

†**Pennsylvania**—Philadelphia & Reading Ry.—A contract has been awarded by this company to C. P. BOWERS & CO., Reading, Penn., for grading and masonry work on a section of 1.81 miles from Nicetown Junction, Philadelphia, to Newtown Junction, Penn.

Virginia—Mill Creek Ry.—This company contemplates the construction of a railway from Wilderness, Va., to Williamsville, Va., about 18 miles. E. E. McCutchan, Staunton, Va., is Ch. Engr.

West Virginia—It is reported that the Horse Creek Land & Mining Co., which owns 12,000 acres of coal and timber lands in Lincoln County, W. Va., contemplates the construction of a ten-mile railway to develop its property. L. E. Poteet, Charleston, W. Va., is Gen. Mgr.

†**Georgia**—Southern Ry.—A contract has been awarded by this company to STEWART & JONES, Rock Hill, S. C., for work north of Gainesville, Ga., in connection with the reconstruction and double-tracking of the Charlotte-Atlanta line. The work includes the construction of 6½ miles of new line, four miles near Mount Airy, Ga., and 2½ miles near White Sulphur, Ga.

†**Alabama**—Ensing Yellow Pine Co.—According to press reports this company has awarded a contract to J. N. GILLIS & SONS, for the construction of a five-mile logging road out of Wetumpka, Ala.

Illinois—Palatine, Lake Zurich & Wauconda R.R.—An extension of its line from Wauconda, Ill., to Fox Lake, Ill., about ten miles, is contemplated by this company. C. H. Patten, Palatine, Ill., is Pres.

Wisconsin—Montana-Waunakee Ry.—This company has been incorporated to construct a 10- to 20-mile railway from Montana, Wis., Waunakee post office. F. D. Brandenburg, Minneapolis, Minn., is interested.

Idaho—American Falls & Rockland Valley R.R.—This company, recently incorporated, plans to start work in the spring on the construction of a railway from American Falls, Idaho, to Roy, Idaho, about 25 miles.

†**Washington**—Great Northern Ry.—This company has awarded a contract to COUGHREN & WOLDSO, Spokane, Wash., for repairing 38 miles of grade on the Bluestem-Columbia branch, near Davenport, Wash.

California—Diamond Match Co.—This company contemplates the extension of its logging road from Sirling City, Calif., north toward Butte Meadows, Calif.

ELECTRIC RAILWAYS

Boston, Mass.—The Boston Elevated Ry. Co. has been petitioned to consider plans for the construction of tracks on Pleasant St. from the subway to Washington St. Edward Mahler, Boston, is Pur. Agt.

Westport, Conn.—The Connecticut Co. is preparing plans for the extension of its line on Railroad Ave. to the station in Westport. J. K. Punderford, New Haven, is Vice-Pres. and Gen. Mgr.

Trenton, N. J.—Rights-of-way are being acquired for the construction of an electric railway line from Trenton to Washington's Crossing; a power plant for its operation is planned at Trenton. Horace G. Hough and Barton T. Fell are interested.

Corry, Penn.—The Corry & Columbus St. Ry. Co. is preparing plans for the construction of a 30-mile electric railway from Corry, Penn., to Mayville, N. Y. C. P. Northrop, Corry, is Pres. and Gen. Mgr.

Holmesburg (Philadelphia post office), **Penn.**—Peter E. Costello, Philadelphia, has applied for a franchise to construct and operate an elevated railway from Front and Arch St. to Rhawn St., Holmesburg.

†**Pittsburgh, Penn.**—(Official)—See item under "Miscellaneous," Track Laying and Paving.

Tarpon Springs, Fla.—James H. Murphy, St. Petersburg, has applied to the City Council for a franchise to construct and operate an electric railway in Tarpon Springs.

Cincinnati, Ohio—The Cincinnati Traction Co. is considering plans for the construction of a cross-town line north of the present route on McMillan St. T. Fitzgerald, Cincinnati, is Gen. Mgr.

Youngstown, Ohio—The Mahoning & Shenango Ry. & Light Co. has applied to the City Council for a franchise to extend its Mahoning Ave. line to Perkins Corners. G. J. A. Paul, Youngstown, is Mgr. Rys.

Paris, Ill.—The Central Illinois Traction Co. plans to construct an extension from Charleston to Paris next spring. W. V. Driscoll, Mattoon, is Supt.

Winthrop, Minn.—The Electric Short Line Ry. Co. is considering plans for the construction of an electric railway through Winthrop, north to Winsted and south, through Sleepy Eye to Jackson. DeKoven Hunter, Minneapolis, is Gen. Mgr.

Bonner Springs, Kan.—The Kansas City, Kaw Valley & Western Ry. Co. has completed financial arrangements and plans to start work about Jan. 1 on the construction of its proposed electric railway from Bonner Springs to Lawrence. W. R. Taylor, Bonner Springs, is Gen. Mgr. and Pur. Agt. Noted Aug. 13.

Madison, Neb.—The Niobrara, Sioux City & Omaha Ry. Co. has completed plans for the extension of its line from Madison to Elgin, Neb. Charles W. Baker, Omaha, is interested. Noted July 17.

St. Louis, Mo.—The United Railways Co. has been petitioned to extend its Tower Grove line to the Gratiot and Lindbergh sections of the city. Robert McCulloch, St. Louis, is Pres., Gen. Mgr. and Pur. Agt.

Houston, Tex.—The Houston, Laporte & Bay Shore Ry. Co. is making preliminary arrangements for the construction of its proposed electric railway to connect Houston, Pasadena, Deepwater, Deer Park, San Jacinto City, Laporte, Seabrook, Webster, Friendswood and Pearland. Samuel F. George, Dayton, Ohio, is Pres. and Gen. Mgr. and John H. Stoner, Houston, Ch. Engr.

Benicia, Calif.—Preliminary arrangements are being made by the Benicia-Valejo Electric Ry. Co. for the construction of its proposed line from Benicia to Vallejo, about seven miles. A. D. Bowen is Pres. Noted July 2 and Aug. 20.

San Francisco, Calif.—The lowest bid received by the Board of Public Works for the construction of the California St. branch of the municipal electric railway was that of F. Rolandi, San Francisco, at \$101,309.

Guelph, Ont.—The Guelph Radial Ry. Co. has been granted permission by the Board of Railway Commissioners to construct a one-track line on Suffolk St. A. H. Goshi, Guelph, is Gen. Mgr., Supt. and Pur. Agt.

†**Ottawa, Ont.**—According to press reports, the Ottawa & St. Lawrence Electric Ry. Co. has awarded a contract to EASTMAN, KENNY & STEARNS, Russell, Ont., for grading about six miles of its proposed line from Russell to Metcalfe.

LIGHT, HEAT AND POWER

Manchester, N. H.—The Manchester Traction, Light & Power Co. has taken out a permit to build a one-story power house at Kelley's Falls. J. Brodie Smith is Vice-Pres. and Gen. Mgr. of the company.

Greensboro, Vt.—The Greensboro Electric Co. is receiving bids for the construction of a hydro-electric plant, including a concrete dam, 32x250 ft., a one-story concrete power house and a penstock, 600 ft. long. Noted Sept. 17 and Oct. 29.

†**Boston, Mass.**—The Infirmary Commission of the Public Works Department has awarded the contract for heating and ventilating systems at the Long Island Nurses' Home, and in ward buildings, to C. H. SANEORN, Boston, at \$6376 and \$9674.

Montague City, Mass.—The Amherst Power Co., controlled by the Cabot interests of Boston, will begin at once the construction of a 45,000-hp. hydro-electric plant at Montague City. Energy generated at this station will supply the transmission lines of the company in the Central Connecticut Valley, including new lines to connect the generating station with the system of the United Electric Light Co., Springfield, Mass. Fred L. Hunt, Greenfield, Mass., is Ch. Engr. of the Amherst Power Co.

West Newbury, Mass.—It is reported that the Board of Selectmen is considering the installation of a municipal electric light plant.

Bath, N. Y.—(Official)—Bids will be received until 6 p.m., Dec. 22, by the Village Trustees, for furnishing and installing engines, boilers, generators and piping for an electric lighting station. W. W. Babcock is Chn. of the Com. John W. Tugart is Village Clerk.

New York, N. Y.—(Borough of Brooklyn)—(Official)—Bids will be received until 3 p.m., Dec. 21, by C. H. Snyder, Supt. of School Bldgs., Park Ave. and 59th St., Borough of Manhattan, for heating and ventilating apparatus and temperature regulation in new Public School 50, Driggs Ave. and South Third St., Borough of Brooklyn.

†**Newark, N. J.**—The Board of Education has awarded the contract for heating equipment for the 13th Ave. School to E. G. Wood-Polk & Co., 154 West 31st St., New York, N. Y., at \$14,777.

†**Philadelphia, Penn.**—The Philadelphia Electric Co. has awarded the contract for the concrete work in its new power house at 26th and Christian St. to the DIEHMANN PAVING CO., Philadelphia, at about \$150,000. John T. Windrinn, Commonwealth Trust Bldg., Philadelphia, is Arch.

Hendings, Penn.—The City Council will begin early in January to receive bids for lighting the city for a period of years, as the present five-year contract with the Metropolitan Electric Co. expires next April. Charles Marks is City Clerk.

Leesport and West Leesport, replacing the present wood structure which is inadequate for the increased traffic at this point. The total bridge is 170 ft. long and 15 ft. wide. D. K. Hoch, Reading, is Controller of Berks County. Charles F. Sanders is County Engr.

Morgantown, W. Va.—(Official)—Bids will be received until 1:30 p.m., Dec. 28, by the County Court of Monongalia County, for the construction of the South Morgantown Bridge at Morgantown. It will be of reinforced concrete, 150-ft. span, 30-ft. roadway and 8-ft. walks. The estimated cost is \$65,000. The Monongalia Engineering Co., Morgantown, is Engr.-in-Charge. Noted Dec. 2.

Shelby, N. C.—The Shelby Northern Ry. Co., S. S. Royster, Pres., will build two bridges on its proposed 21-mile line from Shelby to Casar, N. C. Noted Nov. 26 under "Railways."

Milton, Fla.—(Official)—The Board of Commissioners of Santa Rosa County has awarded the contract for the construction of two steel drawbridges, one over the Blackwater River at Milton, and the other over the Escambia River near Chumuckla Mineral Springs, to the VIRGINIA BRIDGE & IRON CO., Roanoke, Va., at \$24,100. Other bidders were: Austin Bros., Tex., \$24,300; Southern Bridge Co., Birmingham, Ala., \$25,995; Vincennes Bridge Co., Vincennes, Ind., \$39,500. Noted Nov. 26.

Eufaula, Ala.—(Official)—Bids will be received until Dec. 29, by the Board of Revenue of Barbour County, Clayton, for the construction of a bridge over the Clayton-Eufaula Rd. abutments, over Barbour Creek on the Clayton-Eufaula Rd. Plans on file with W. S. Keller, State Highway Engr., Montgomery, Ala. Noted Dec. 10.

Greenville, Miss.—(Official)—Bids will be received until Jan. 4, 1915, by the Board of Supervisors of Washington County for the construction of 18 steel bridges of from 32- to 70-ft. span, and for three wooden bridges. The Morgan Engineering Co., Goodwyn Institute Bldg., Memphis, Tenn., is Engr.-in-Charge. This is a part of the development of the Bogue Phalia Drainage District. Noted Oct. 1 and 15.

Gretna, La.—The Police Jury of Jefferson Parish has awarded the contract for repairing the bridge at East End, on Lake Ponchartrain, to C. M. HALE, Gretna.

Lake Charles, La.—(Official)—Bids will be received until 10 a.m., Jan. 1, 1915, by the Police Jury of Calcasieu Parish, for the construction of 66 reinforced-concrete bridges and culverts and a number of wooden bridges and culverts on Highways Nos. 5, 6, 7, 8, 14 and 16. E. C. House is Secy. of the Police Jury.

New Orleans, La.—Plans are being prepared for the construction of a bridge over Bayou St. John at City Park Ave. and a track loop on Metairie Ridge. The cost of these improvements will be shared by the New Orleans Ry. & Light Co., and the Orleans-Kenner Interurban Ry. M. S. Sloan is Gen. Mgr. of the New Orleans Ry. & Light Co.

Elyria, Ohio.—The City Council and the Board of Commissioners of Lorain County are considering widening and repairing the East Bridge St. Bridge to accommodate the constantly increasing traffic. The county has about \$16,000 available for the purpose, and if this amount is insufficient, the city and the street railway company will be required to make up the deficit. C. M. Theobald is City Engr.

South Bend, Ind.—The Board of Public Works has approved plans for the Grand Trunk Western Ry. for a new single-track railway bridge to replace the old one at South St. Peter St. William S. Moore is City Engr.

Washington, Ind.—The Commissioners of Daviess and Pike Counties have had plans prepared for the construction of a steel bridge across the White River of which the former has the estimated cost is \$17,250. Bids will be asked the first of the year, if the County Councils will make appropriations for the purpose. Lewis T. Gootee, Washington, County Surv. of Daviess County, is Engr.-in-Charge.

Marquette, Mich.—(Official)—The City Council has awarded the contract for the construction of a 60-ft. bridge over the Carp River at Lake St. to the WORDEN-ALLEN CO., Milwaukee. Noted Dec. 3.

Lebanon, Ill.—(Official)—Bids will be received until 10 a.m., Dec. 28, at the office of C. E. Chamberlin, Lebanon, for the following bridge construction in St. Clair County: College Road No. 2 Bridge, O'Fallon Township, 70-ft. span, 16-ft. roadway, steel bridge, concrete abutments, estimated cost, \$3350; White No. 2 Bridge, Union Valley Township, 70-ft. span, 16-ft. roadway, steel and concrete, estimated cost, \$2780; State Road No. 2 Bridge, O'Fallon Township, 70-ft. span, 18-ft. roadway, steel and concrete, estimated cost, \$4075. David O. Thomas, Bellefonte, is Supt. of Highways for St. Clair County.

Taylorville, Ill.—(Official)—The County Superintendent of Highways of Christian County has awarded the contract for the construction of a reinforced concrete bridge between Johnson and Taylor Townships to the EAST ST. LOUIS BRIDGE CO., Bridge Co., East St. Louis, Ill., at \$12,000. The bridge in Johnson Township was awarded to the CENTRAL STATES BRIDGE CO., Indianapolis, Ind., at \$15,596. The Engineer's estimates for these two bridges were \$15,350 and \$17,000 respectively. Noted Dec. 3.

Columbus, Wis.—Bids will be received until Dec. 18, by the City Clerk for the construction of a 60-ft. plate-girder bridge with concrete abutment and floor.

La Crosse, Wis.—The Board of Public Works has awarded the contract for repairing the Mississippi River Wagon Bridge, including sidewalk, concrete black pavement and construction of west approach, to the LACROSSE CONSTRUCTION CO., La Crosse, at \$13,940.

Washburn, Wis.—M. W. Torkelson, State Bridge Engr., Madison, Wis., is preparing plans for five plate-girder and beam bridges in Bayfield County with state aid. Contracts will not be awarded before spring.

Benidji, Minn.—See item under Miscellaneous; Metal Culverts.

Breckenridge, Minn.—(Official)—On account of changes in the plans for 10 county bridges, ranging in length from 20 to 26 ft., bids for which were received Dec. 5, the work will be readvertised at an early date. P. E. Truax is County Auditor. Noted Nov. 26.

Melrose, Minn.—(Official)—Bids will be received until 2 p.m., Dec. 22, by N. Thomey, Audr. of Stearns County, St. Cloud, Minn., for the construction of State Bridge No. 1605 on State Road No. 1. The bridge will be 120 ft. long with an 18-ft. roadway.

Winona, Minn.—Plans are being prepared by L. P. Wolff, Consult. Engr., Germania Life Bldg., St. Paul, Minn., for a new approach to the High Wagon Bridge over the Mississippi River. It will be about 1700 ft. long with an 18-ft. roadway and one 5-ft. sidewalk. The estimated cost is \$82,000 for a steel structure, or \$100,000 if of concrete.

Anthony, Kan.—Plans have been completed by Harris & Eastman, Engrs., Hutchinson, Kan., for the construction of reinforced-concrete bridges as follows: One of nine spans, 299 ft. long; one of four spans, 88 ft.; one of two spans, 45 ft., and two of one span each, 23 and 32 ft. long, respectively. D. E. Hancock, Atlea, Kan., is Chn. Bd. of County Comrs.

Kansas City, Kan.—The Board of Commissioners of Wyandotte County has adopted plans for the new high-ridge bridge over the Kaw River at Central Ave., Kansas City, Kan. The center span will be 344 ft. long, with two end spans of 200 ft. each. Viaducts at each end will add 1500 ft. to the length of the structure. The channel piers will be of concrete. Plans will be submitted at once for the approval of the War Department and the Kaw Valley Drainage Board. R. L. McAlpin is County Engr. Noted Sept. 24 and Oct. 13.

Turner, Kan.—The Commissioners of Wyandotte County, Kansas City, Kan., have decided to repair the east approach of the Turner Bridge at a cost of about \$10,000. The bridge and its west approach were rebuilt about a year ago, costing about \$37,000. Noted Oct. 16 and Nov. 26, 1913.

Omaha, Neb.—The United States Supreme Court has confirmed the right of the city of Omaha to enforce the ordinance compelling the Missouri Pacific Ry. to place a viaduct over its tracks on West Dodge St. to accommodate street cars as well as other traffic. According to press reports, construction work will begin soon on a viaduct to cost about \$80,000. J. R. Stephens, St. Louis, Mo., is Ch. Engr.

Billings, Mont.—Bids will be received until Dec. 28, by the Auditor of Yellowstone County for the purchase of one issue of \$15,000 bonds and one of \$22,000, the proceeds to be used for the construction of bridges on the Yellowstone River at Pompey's Pillar and across Duck Creek. H. E. Howell is Deputy County Clk. Noted Oct. 16 and Nov. 29, 1913.

Railways Allowed Substantial Rate Increase

The Interstate Commerce Commission handed down the Rate Decision on Friday which allowed one hundred railway companies in the East to increase their rates on certain classes of freight. The advance, which will amount to 5% in some cases, will average 3½ to 4%, and mean an increase in the revenue of \$30,000,000 to \$35,000,000 per year. Decision was affirmed by a vote of 5 to 2, Commissioners Harlan and Clements dissenting.

This decision was the result of reopening the case after the war started. That the war had an influence on the decision is seen from the following extract of the opinion:

"Whatever the consequences of the war may prove to be we must recognize the fact exists; the fact that it is a calamity without precedent and the fact that by it the commerce of the world has been disarranged and thrown into confusion. Collectively they (war conditions) present a new situation."

By many it is argued that the increase in rates is not the important part of the decision, but the change in temper of the commissioners who are aiding the railways by their counsels. That the entire country has changed its opinion of the railway situation is evident from the decision and the referendum vote in Missouri repealing the "Full Crew Law."

Physical Valuation of Railways Criticized—When the valuation work was started Congress appropriated about a million and a half dollars for expenses. Beginning on an entirely new subject, it was to be expected that many mistakes would be made, but it was not contemplated that practically the whole of the first year's work would go to waste, says the "Journal of Commerce." While officials of the Commission would attempt to refute the statement that nothing tangible had been accomplished with the million and a half appropriated by Congress, here are many railroad experts who assert that the work done has proven of very little, if any, use. It is now learned that the Commission is contemplating asking Congress for an appropriation of three million dollars for the physical valuation work during the coming year. The Government, it is said, is not at present in any position to make large appropriations. The European war has reduced the customs revenues and the war revenue tax was placed upon the statute books for but one year.

A number of railroad experts question whether any direct good is to be accomplished by making a physical valuation of the railroads of the United States. Theoretically it would be a good step inasmuch as the Interstate Commerce Commission might then have some comprehensive basis for making rates, and then it would be easy to establish the desirability of new security issues. But already the physical valuation work has raised a new crop of critics. The theory upon which the Commission is basing this work has been adversely discussed in many quarters. It was the subject of a special report and discussion by the National Association of Railway Commissioners, who convened here last month. The question was raised after obtaining the first cost value of railroad property. How is the Government to establish the present value of this property following many years of usage?

The Physical Valuation Board has provided for a "condition per cent." account, but even this has been criticized as an arbitrary matter and wholly impracticable. In the first place, it was asked, What is the meaning of "condition per cent." If the condition per cent. is fixed at 75 per cent., would it mean that one-quarter of the life of the ties had expired, or that three-quarters of them were as good as it was practicable to maintain them, or that one-quarter of them should be immediately replaced, or that the present value was 75 per cent. of the present cost of laying them, or that the average tie was about three-quarters as good as new. This same question might arise as to any class of property of the railroads.

The schedule of valuation advanced by the Commission might all be discussed just as adversely as the "condition per cent." mentioned herewith. Probably the most important of these items is that of abandoned property. The railroads might reasonably ask the Commission what is to be done with abandoned property. Even granting that it will be comparatively easy to estimate the value of abandoned property, the

question still arises, What effect such property is to have on the rate basis? When the property is abandoned for the best interests of the road it appears to be reasonable to suppose that a road should not be compelled to lose on that account. If the reasonableness of rates is to be measured by the physical value of the property used in transportation, the abandoned property still on the hands of the roads should be estimated into this valuation. Furthermore, it was suggested to the Commission that "abandoned property" should be divided into two classes, namely, that property which has been abandoned and sold by the railroads and that property which is no longer used in the business of transportation, but which is still in the possession of the roads.

Higher Ocean Freight Rates

Rates for shipment on the seas have risen in a perpendicular way since the middle of October, and are now higher than before in years. As an example, foreign vessels have recently been chartered to take cotton to Scandinavian ports at a rate of \$1 to \$1.30 per 100 lb. The rate for grain from the Atlantic seaboard to Liverpool, which was 2½d. last year, has risen to 7d. Flour, which was 14 cents then has advanced to 26 cents. The National City Bank has received a cable from its Buenos Aires branch, saying that ship owners can obtain very lucrative rates for sailing at that port from January to July, both for steam and sail tonnage. Those familiar with maritime matters predict that a rate of 10s. will be paid for grain shipment before the highest figures are reached. The causes are well known. For example, there are approximately 42,000,000 gross tons of shipping available by the maritime nations. This includes some coastwise trade and also more than 2,000,000 tons on the Great Lakes of the United States. There has been taken from this, since the war started, 3,500,000 gross tons of German and Austrian vessels, which has been interned at neutral ports, in home waters, or captured. A quarter of a million tons have been lost by British ship owners to the Germans, and perhaps 350,000 tons, vessels of all nations, have been lost by mines. In addition, the British Government has commandeered 500 vessels, with a gross tonnage of 1,700,000, to transport troops from various parts of the world. This makes a total of nearly 6,000,000 tons, or approximately 15% of the world's tonnage available in ordinary times, but at present of no use as far as cargo-carrying trade is concerned. In addition to this, the element of time in making a voyage has a great deal to do with the matter. Vessels are held up for days and even weeks, in part owing to naval operations.

Navigation is impeded by the restricted use of the wireless, the lack of proper beacons; but more than all of this, there is the fact that a great deal more traffic has to be moved, particularly to Great Britain; where formerly ships were heavily laden on outbound voyages from London and British ports, now they go light, coming back with full cargoes. Considerable difficulty has also been experienced in securing coal at home ports and ordinary coaling stations. Then, too, the price of coal in the Southern Hemisphere and Mediterranean and Asiatic ports is very much higher than at any previous time.

The Steinway Tunnel, a tube extending from Long Island City under the East River to the Borough of Manhattan, New York, will be open for travel April 1, according to a recent statement by Theodore P. Shonts, Pres. of the Interborough, who said a temporary service will be started at that time. Trains from Jackson Ave., Long Island City, will run to a temporary station at 118 St. and Lexington Ave., Manhattan. The tunnel has been practically completed for several years, but never opened because of litigation.

The Bucyrus Co., South Milwaukee, Wis., has just received an order for a levee building machine from the United States Army Engineer's office for the Fourth District. This office is located at New Orleans. The machine cost approximately \$44,000. It is reported that another machine of a similar design will be ordered for levee work in the spring.

Pine Bluff, Ark.—The City of Pine Bluff is considering the purchase of the electric-light plant and water works system. Improvements and extensions will be made if the transaction is completed. W. A. Lee is City Clerk.

Marble Falls, Tex.—It is reported that the Colorado River Power Co., Marble Falls, plans to build transmission lines from its hydro-electric plant, now in course of construction, to Houston and neighboring cities and towns. Noted July 9.

Hedrock, Okla.—See item under "Water Supply-Irrigation."

Red Cliff, Colo.—It is reported that John Fleming, Red Cliff, is considering the establishment of an electric-light plant to serve the town, and will shortly apply for a franchise.

White Oaks, N. M.—The Wild Cat Mining Co. is building a new electric power plant to supplement the present one. A total of 1100 hp. will be available. The company will extend its transmission lines to the properties of the Parsons Mining Co. and the American Mining Co. Noted Sept. 10, under Carrizozo, N. M.

Montesano, Wash.—The Northwest Electric & Water Works Co. has had plans prepared for an electric-power plant to be ready for spring. The plant is to be located on a steam-power plant to be located on the water front.

Seattle, Wash.—The Board of Public Works has awarded contracts for furnishing distributing transformers for the municipal electric-light plant to the FORT WAYNE ELECTRIC CO., Colman Bldg., Seattle, at \$27,972 and the PITTSBURGH TRANSFORMER CO., Pittsburgh, Penn., at \$5000. Noted Dec. 3.

Gold Hill, Ore.—The City Council has awarded the contract for lighting the city for a period of ten years to the CALIFORNIA-OREGON POWER CO. The system will consist of 183 cluster lights, 35 single lights on wooden standards and 16 lights on iron standards. Bids for its installation will be received until Jan. 4. B. G. Harding is City Recdr. Noted Dec. 17.

Pasadena, Calif.—It is reported that the City Trustees contemplate the installation of new equipment, costing about \$46,000 in the municipal electric-light plant. C. W. Kolner is Gen. Mgr. and C. Eng. of the plant.

Stockton, Calif.—The City of Stockton has awarded the contract for lighting the streets and boulevards of the city for a period of five years, beginning Dec. 15, to the WESTERN STATES GAS & ELECTRIC CO., of California. Some additions will be made to the system.

BRIDGES

Woonsocket, R. I.—The City Council has passed a resolution appropriating \$15,600 to be used for straightening the lower end of Hamlet Ave. between Davison St. and Cumberland St., and replacing the two wooden bridges between those points with one reinforced concrete bridge over the Hamlet Trench and the Blackstone River. F. H. Mills is City Clerk.

Oswego, N. Y.—At a special election held, Dec. 11, the taxpayers of the towns of Oswego and Volney voted in favor of building a reinforced concrete bridge over the Oswego River at Minetto, Oswego County. The bridge will be located at Benson Ave., about 1800 ft. south of the present structure at Minetto. The estimated cost is \$91,414.

Pateroson, N. J.—The Board of Chosen Freeholders of Passaic County has instructed Garwood Ferguson, County Engr., to prepare plans for a bridge across the Passaic River from the Pennington Park property to Westside Park. Alternative plans for a reinforced concrete bridge and a two-span steel bridge will be submitted to the Park Board for approval. It is said that either bridge will cost approximately \$45,000.

Perth Amboy, N. J.—The Board of Chosen Freeholders of Middlesex County, New Brunswick, has awarded the contract for pile and timber rest piers under the draw span of the Amboy Bridge over the Raritan River, to the GENERAL CONTRACTING & ENGINEERING CO., 29 Broadway, New York, N. Y., at \$1912. Other bidders were: Rhodes & Manvel, Elizabeth, N. J., \$6500, and H. H. Holmes, Jersey City, \$11,900. Noted Dec. 3.

Trenton, N. J.—The Pennsylvania R.R. has submitted a plan to the Board of City Commissioners to eliminate navigation on the waterway of the Delaware & Raritan Canal, and construct permanent bridges at the following street crossings: Hermitage Ave., Prospect, Willow, North Warren, West Hancock, Broad and North Montgomery Sts.; estimated cost, \$125,000.

Nanticoke, Penn.—(Official)—The Dravo Contracting Co., Pittsburgh, general contractors for the construction of the bridge over the Susquehanna River between Nanticoke and West Nanticoke, has awarded a sub-contract for the concrete piles required for the structure to the PLYMOUTH STEEL PILE & FOUNDATION CO., 11 Pine St., New York, N. Y. D. A. Keefe, Athens, Penn., is Consult. Engr. Noted June 25 and July 23.

Norristown, Penn.—Press reports state that the Commissioners of Montgomery County are considering the construction of two new bridges in Frederick Township, one over Scholt Creek, on the road leading from Swamp Rd. to Little Rd., estimated cost, \$2500, and the other over Goshenhoppen Creek on the road from Zieglerville to Spring Mount, estimated cost, \$2000.

Allen, Md.—(Official)—Bids will be received until noon, Dec. 29, by the State Roads Commission, 601 Garrett Bldg., Baltimore, for the construction of a reinforced concrete bridge over the creek, between Wilcomico and Somerset Counties, near Allen, Md. Contract No. 094-A. O. E. Weller is Chm., and William L. Marey is Secy. of the State Roads Comm.

Baltimore, Md.—Bids will be received until Dec. 29, by the State Roads Commission, Garrett Bldg., for the construction of a draw rest pier for the Dover Bridge, Talbot and Caroline Counties.

Covington, Va.—(Official)—Bids will be received until noon, Jan. 4, by the Clerk of the Circuit Court of Allegheny County for the construction of a 100-ft. bridge over Dunlaps Creek, 5½ miles from Allegheny; superstructure to be either of steel or reinforced concrete with concrete substructure.

CONTRACT PRICE
QUAY WALL, PAWTUCKET, R. I.

Plans are being prepared by the State Harbor Improvement Commission for the construction of a quay wall at Pawtucket, R. I. The estimated cost is \$100,000. The item bids were as follows:

	A	B	C	D	E
Excavation for foundation	\$3.47	\$3.47	\$3.70	\$3.60	\$3.75
Foundation concrete	8.71	8.71	8.80	8.50	12.50
Foundation concrete w/	6.70	7.25	6.90	8.00	11.00
Foundation concrete coping	9.70	8.70	10.50	11.30	12.00
Foundation concrete coping	7.00	7.00	6.00	5.00	12.00
Foundation concrete coping	9.00	9.00	8.00	7.00	9.00
Foundation concrete coping	0.04	0.04	0.04	0.04	0.04
Total	\$3.42	\$3.42	\$3.70	\$3.62	\$3.75

SEWER, PORTLAND, ORE.

Plans are being prepared by the City Council for the construction of a sewer at Portland, Ore. The estimated cost is \$100,000. The item bids were as follows:

	A	B	C	D	E
Excavation for foundation	\$3.47	\$3.47	\$3.70	\$3.60	\$3.75
Foundation concrete	8.71	8.71	8.80	8.50	12.50
Foundation concrete w/	6.70	7.25	6.90	8.00	11.00
Foundation concrete coping	9.70	8.70	10.50	11.30	12.00
Foundation concrete coping	7.00	7.00	6.00	5.00	12.00
Foundation concrete coping	9.00	9.00	8.00	7.00	9.00
Foundation concrete coping	0.04	0.04	0.04	0.04	0.04
Total	\$3.42	\$3.42	\$3.70	\$3.62	\$3.75

WATER SYSTEM, WAPPINGERS FALLS, N. Y.

Plans are being prepared by the Board of Trustees Nov. 18, 1913, for the construction of a water system according to plans prepared by the Board of Trustees. The estimated cost is \$100,000. The item bids were as follows:

BUILDINGS

(Continued from page 384)

East St. Louis, Ill.—The Maher Construction Co., East St. Louis, has purchased a site at Sixth St. and Missouri Ave., for the construction of an office building. Construction will begin in the spring.

Galesburg, Ill.—Veritas Lodge No. 478 and the First Scandinavian Lodge No. 418, L. O. O. F., will construct a four-story building, estimated to cost, \$70,000.

Ottawa, Ill.—Plans have been prepared by Jason F. Richardson, Jr., Arch., for the construction of three fireproof buildings. The group will be known as the Illinois Valley General Hospital. The estimated cost is \$75,000.

Springfield, Ill.—The Illinois Centennial Commission will petition the next legislature to appropriate \$1,000,000 for the construction of a state building. Hugh S. Magill, Jr., Springfield, is Chm. of Comm.

Madison, Wis.—Bids will be received until 2:30 p.m., Jan. 18, by M. E. McCaffrey, Secy., University of Wisconsin, Administration Bldg., for constructing the superstructure of the addition to the Soils Bldg.

St. Paul, Minn.—The St. Paul Union Depot Co., are having plans prepared for the construction of the \$15,000,000 St. Paul Union Depot. Located at Minneapolis, Minn., is Pres. The St. Paul Athletic Club is planning to construct a \$500,000 club house.

Parsons, Kan.—The contract for the construction of a three-story office building for the Missouri, Kansas & Texas Ry. has been awarded to the WIMMER CONTRACTING CO., St. Louis, Mo. Estimated cost, \$50,000.

Kansas City, Mo.—Plans are being prepared for the construction of an addition, as a home for nurses for the German Hospital Association. Estimated cost, \$60,000.

FILTRATION PLANT, CLEVELAND, OHIO

Bids were received Dec. 8 by the city for the construction of a filtration plant at the Division Pumping Station, from (A) M. L. Bayard, Philadelphia, Penn.; (B) American Water Softener Co., Philadelphia, Penn.; (C) Roberts Filter Mfg.

	A	B	C	D	E	F
Filter strainer systems (dump sum)	\$53,000.00	\$50,441.00	\$36,738.00	\$54,600.00	\$55,639.00	\$65,092.00

Construction News

★Denotes work advertised in ENGINEERING NEWS.

†Denotes contract awarded. The names of bidders awarded contracts are set in CAPITALS.

RAILWAYS

Alabama—Tennessee & Alabama R. R.—See item under Tennessee.

Tennessee—Tennessee & Alabama R.R.—Surveys are being made by this company for the construction of its proposed railway from Fayetteville, Tenn., to Huntsville, Ala., about 34 miles. J. E. Hurd, Fayetteville, Tenn., is Ch. Engr.

†**Kentucky**—Louisville & Nashville R.R.—According to press reports this company has awarded a contract to LANGHORNE & LANGHORNE, Richmond, Va., for constructing a five-mile branch from Typo, Ky., to the property of the Haley Coal Co.

Edwin W. Gearhart and J. A. Helm, Scranton, Penn., who recently purchased coal and timber lands in Clay County, Ky., plan the construction of a railway from Barbourville to Manchester, Ky.

Ohio—Pennsylvania Lines West of Pittsburgh—This company, it is reported, bought the Dayton, Lebanon & Cincinnati R.R., which runs between Dayton, Ohio, and Lebanon, Ohio, for \$1,000,000.

Missouri—Rolla, Ozark & Southern Ry.—This company has secured the right of way and is making preliminary arrangements to construct its proposed railway from Rolla to Annett, Mo., about 18 miles. J. E. Walker, Rolla, Mo., is Secy. and Gen. Mgr. Noted July 2.

Arkansas—Cairo-Truman & Southern Ry.—This company contemplates the construction of a 20-mile extension to its line from its present terminus to Earl, Ark. L. M. Preston, St. Louis, Mo., is Gen. Mgr.

Washington—The Farmers' Union Grain Agency contemplates the organization of a company for the construction of a 20-mile railway in Washington. R. O. Earnheart, Wallula, Wash., is interested.

California—Southern Pacific Co.—According to press reports plans are being considered by this company for the extension of its Mojave and Bakersfield branch from Cameron to Mojave, Calif., and from Tehachapi to Treves. W. Hood, San Francisco, Calif., is Ch. Engr.

Stockton, Terminal & Eastern R.R.—Plans are being prepared by this company for the extension of its line from Bellota to Jenny Lind, Calif., about ten miles. J. E. Adams, Stockton, Calif., is Vice-Pres. and Gen. Mgr.

Northwestern Pacific R.R.—Surveys are being made by this company for the construction of a branch line from Healdsburg to Christy, about 6 miles. J. W. Williams, San Francisco, Calif., is Ch. Engr. Const.

ELECTRIC RAILWAYS

New Haven, Conn.—The Connecticut Co. is considering plans for the extension of its lines on East St. from Water to State St. F. P. Harton, New Haven, is Mgr.

Willimantic, Conn.—The Willimantic & Manchester St. Ry. Co. has been incorporated to construct an electric railway to connect Willimantic, Hop River, Andover, Bolton and Manchester, about 18 miles. T. J. Spellacy, Hartford, Conn., is interested.

Ilion, N. Y.—The Business Men's Association is agitating the construction of an electric railway in Ilion.

Monticello, N. Y.—The Monticello & Middletown Ry. Co. is being organized to construct an electric railway from Monticello to Middletown. Blake A. Mapledoram, Monticello, is interested.

Saratoga Springs, N. Y.—The Hudson Valley Ry. Co. contemplates constructing the connection of its Troy-Saratoga and Saratoga-Warrensburg lines in Saratoga Springs. A. E. Reynolds, Glens Falls, is Gen. Mgr.

†**Point Pleasant, N. J.**—The Trenton, Lakewood & Seacoast Ry. Co. has awarded the contract for the construction of an electric railway from Trenton to Point Pleasant, about 30 miles, to the YANDERBILT ENGINEERING CO.

Marletta, Penn.—The citizens of Marletta and Maytown contemplate the construction of an electric railway to connect the two towns.

Washington, D. C.—Preliminary arrangements are being made by the Washington Ry. & Electric Co. for double-tracking its line on 14th St. from F St. to Pennsylvania Ave., and on Water St. from 14th St. eastward. R. W. Crowell, Washington, is Pur. Akt.

Safety Harbor, Fla.—According to press reports, plans are being prepared for the construction of an electric railway at Safety Harbor.

Birmingham, Ala.—The Birmingham Ry., Light & Power Co. is preparing to construct about two miles of new track in Birmingham. J. P. H. de Windt, Birmingham, is Gen. Mgr.

Newport, Tenn.—The Carolina, Greenville & Northern R.R. Co. has been incorporated to construct an electric railway from Kingsport to Newport. H. S. Reed, Los Angeles, Calif., is Vice-Pres., and James H. Callahan and Kirby Thomas, New York, N. Y., are Vice-Presidents.

Alliance, Ohio—The Stark Electric Ry. Co. plans to extend its line from Alliance to Marlborough, about seven miles. F. L. Mowry, Alliance, is Gen. Mgr. and Pur. Akt.

Chillicothe, Ohio—According to press reports, a company is being organized to construct an electric railway from Chillicothe, Ohio, to Peoria, Ill. E. F. Hunter, E. A. Mitchell, E. V. Matrice and John F. Lynch are interested.

Columbus, Ohio—The citizens have petitioned the Columbus Ry., Power & Light Co. to construct a line to connect its 11th and Chittenden Ave. lines. E. K. Stewart, Columbus, is Vice-Pres. and Gen. Mgr.

Ironton, Ohio—The Portsmouth St. Ry. & Light Co. is preparing plans for the construction of an electric railway from Ironton to Sciotoville, about 22 miles. R. D. York, Portsmouth, is Vice-Pres. and Gen. Mgr.

Dixon, Ill.—Plans are being prepared by the Sterling, Dixon & Eastern Electric Ry. Co. for the extension of its lines in Dixon. A. W. Courmyer, Dixon, is Supt.

Peoria, Ill.—See item under Chillicothe, Ohio.

Phoenix, Ariz.—Plans are being considered by the Phoenix Ry. Co. for the construction of a 1½-mile extension to its line on South First Ave. Samuel H. Mitchell, Phoenix, is Gen. Mgr. and Pur. Akt.

Pasadena, Calif.—The City Council has granted a franchise to the Pacific Electric Ry. Co. to construct a double-track line on North Lake Ave., in Pasadena. J. McMillan, Los Angeles, is Gen. Mgr.

Ukiah, Calif.—Preliminary arrangements are being made for the construction of the proposed electric railway to connect Ukiah, Cold Creek, Upperlake and Potter Valley. E. L. Cunningham, P. Connolly and F. J. Weldon are interested. Noted Dec. 10.

LIGHT, HEAT AND POWER

Pawtucket, R. I.—It is reported that bids will soon be asked for plumbing and heating apparatus in the new Abbott St. and Newport Ave. Schools. R. C. Monahan is Arch.

†**Hartford, Conn.**—The P. J. Carlin Construction Co., general contractors for the reconstruction of the station of the New York, New Haven & Hartford R.R., has awarded a subcontract for the furnishing of heating equipment to the MILLNER-BILL CO., Springfield, Mass.

Albany, N. Y.—The United Traction Co. will spend about \$55,000 for machinery and for copper and underground cable for its new transformer station to be built at Sheridan Ave. and Chapel St. James P. Hamilton, Albany, is Gen. Mgr. of the company.

Newton, N. J.—The Board of Public Utility Commissioners has authorized the Newton Gas & Electric Co. to make some improvements in its gas and steam plants. George P. Matthews, Newton, is Secy. of the Newton Gas & Electric Co.

Kutztown, Penn.—The Borough Council has decided to build a new municipal electric plant, costing about \$22,000, to supply electricity for municipal and commercial purposes. Bonds for the construction of a new plant were voted last November. The present plant will be used until the new one is completed. F. A. Moyer is Chm. of the Electric Light Com. Noted Nov. 19.

Laurelton, Penn.—It is reported that the Borough Council is considering the construction of a power house to cost about \$600.

Monaca, Penn.—The City Council, according to press reports, is considering the establishment of a municipal electric-light plant, in which case it will purchase the distributing systems of the Monaca Electric Co. and the Beaver County Light Co., which now supply electricity to the town.

†**May Mhette, Ala.**—The City Council has awarded the contract for the construction of a municipal electric-light plant to J. W. GURLEY, Mobile, Ala., at approximately \$32,500. The plant will include a three-phase 60-cycle 2300-volt generator, a two-panel switchboard and about two miles of pole line. Edgar B. Kay, Tuscaloosa, Ala., is Engr.-in-Charge. Noted Aug. 20.

Canal Dover, Ohio—Fred Warther, Ch. Engr. of the municipal power plant, has recommended to the City Council the installation of an additional 350-hp. gas engine and generator, to cost about \$20,000. If the new unit is installed, an addition to the present power station will be necessary. O. Salmon is Pur. of \$50,000.

East Liverpool, Ohio—It is reported that plans have been prepared for a municipal electric-light plant estimated to cost \$60,000. J. C. Kelly is City Engr.

†**Lowellville, Ohio**—The Ohio Iron & Steel Co. has awarded the contract for new boiler equipment for its furnace plant to the BABCOCK & WILCOX CO., 85 Liberty St., New York, N. Y., at \$50,000.

Detroit, Mich.—It is reported that the City Council has authorized the City Controller to issue bonds for \$350,000, the proceeds of which will be used for improving and extending the municipal lighting system. George Engle is City Controller.

Tipton, Iowa—At a recent election the citizens voted in favor of municipalizing the electric-light and power plant, now controlled by the Tipton Light & Heating Co.

Gaylord, Kan.—The city is reported to be contemplating the establishment of a municipal electric-light plant to cost about \$7000.

20 Mg triple expansion pumping engine at the Ridgewood North Side pumping station, for removing two boilers and their appurtenances from the Mulhurn pumping station, transporting and erecting one in the Woodhaven pumping station and one in the Agawam pumping station with new stacks, piping and other appurtenances, have been awarded to CAMPBELL & SMILEY, at \$3092, for work at the Ridgewood North Side pumping station and to RUDOLPH GERSMAN, at \$3462, for work at the Woodhaven pumping station. Noted Dec. 3 and Dec. 17.

†**Camden, N. J.**—The contract for c.-l. pipe, specials and fire hydrants has been awarded to R. D. WOOD & CO., Philadelphia, Penn.

†**Freehold, N. J.**—The Board of Public Utility Commissioners has granted the Monmouth County Water Co. permission to issue bonds for \$81,000, the proceeds of which will be used for the improvement of the water system.

†**Jersey City, N. J.**—(Official)—Bids will be received until 2 p.m., Jan. 7, by the Board of Commissioners for c.-l. pipe. M. I. Fagan is City Clerk.

†**Newark, N. J.**—Bonds for \$200,000 have been sold the proceeds of which will be used for making extensions to the watershed. Tyler Parmyly is City Controller.

†**West Orange, N. J.**—According to press reports Alexander Potter, Consult. Engr., 50 Church St., New York, N. Y., is preparing plans for the construction of a 24-in. water main in West Orange, by the Thomas A. Edison Works. Carl Pentz is Chm. of the Water Comm. Noted Aug. 20.

†**Ford City, Penn.**—Bids will be received until Jan. 4, by D. O. Crouch, Borough Secy., for an 18-in. low lift centrifugal pump.

†**Baltimore, Md.**—The contract for constructing a pumping station near the Public Works, Deind Hill Park has been awarded to L. ANDREW CO., Baltimore, at \$15,500.

†**Tarpon Springs, Fla.**—All bids received for materials for making extensions to the water and sewer systems have been rejected. The contract will be readvertised soon. J. B. McCrory Co., 1408 Third National Bank Bldg., Atlanta, Ga., is Engr.

†**Bay Minette, Ala.**—The contract has been awarded to J. W. GURLEY, Mobile, at \$32,000 for constructing a water system, sewer system and electric-light plant. Bids were opened Dec. 15. Noted Dec. 3.

†**Nashville, Tenn.**—The contract has been awarded to T. I. CURTIS & SONS, Nashville, at \$4184 for laying about 15,000 ft. of water mains.

†**Seabee, Ky.**—Bids will be received until Jan. 4, by the City Clerk for the purchase of \$14,000 in bonds, the proceeds of which will be used for the construction of a water system. Noted Dec. 3 and Nov. 19.

†**Akron, Ohio.**—An election will probably be held to vote on the question of issuing \$500,000 in bonds, the proceeds of which will be used for the completion of the water system.

†**Cleveland, Ohio.**—The contract has been awarded to W. L. BAYARD, Philadelphia, Penn., at \$133,500, for installing a filter and equipment at the filtration plant. Bids opened Dec. 8. Noted Dec. 17.

†**Cleveland, Ohio.**—(Official)—Bids were received, Dec. 18, by the Commissioner of Purchases and Supplies for fire hydrants and hose rates as follows: Pittsburgh Valve Foundry & Construction Co., Pittsburgh, Penn., \$2900; Coffin Valve Co., Neponset, Mass., \$4256; Bruce Machett Engine Co., Cleveland, Ohio, \$4264; Coldwell-Wilcox Co., Newburgh, N. Y., \$4500; Cleveland Machine Works, Cleveland, Ohio, \$5000; and Roe Stephens Mfg. Co., Detroit, Mich., \$5000. Noted Dec. 19.

†**Findlay, Ohio.**—(Official)—We have been advised that the Illinois Pipe Line Co. does not intend to build a pipe line from Columbia to Van Wert County. Noted Dec. 17.

†**Lima, Ohio.**—At the next meeting of the City Council, Carl Bryson, City Engineer, is presenting plans for the construction of an upper reservoir and for drilling wells. The estimated cost is \$70,000. Noted Sept. 24.

†**Lorain, Ohio.**—Bonds for \$103,151 will be issued by the Council, the proceeds of which will be used for the improvement of the water system. Noted Aug. 6.

†**New Boston, Ohio.**—(Official)—Bids will be received until noon, Jan. 11, by the Village Council for completing the water system. Thomas D. O'Neal is City Clerk.

†**Shaker Heights (Cleveland post office), Ohio.**—Bids will be received until noon, Jan. 19, by Carl A. Palmer, Village Clerk, First National Bank Bldg., Cleveland, Ohio, for laying 6-in. water mains. Wm. Willard, 804 Marshall Bldg., Cleveland, is Village Engr.

†**South Newburgh (Newburgh post office), Ohio.**—Bids will be received until Jan. 30, by H. H. Bohning, City Clerk, for the purchase of \$21,000 in bonds, the proceeds of which will be used for the installation of a water system.

†**Hendon Harbor, Mich.**—Bonds for \$60,000 were voted by the citizens at a recent election. The proceeds will be used for the improvement and extension of the water system. B. Spaulding is City Clerk. Noted Dec. 3.

†**Anna, Ill.**—According to press reports bids will be received in January for making extensions to the water system. E. S. Alden is Pres. of the Bd. of Local Improv.

†**Clinton, Ill.**—At a recent election the citizens defeated the question of issuing \$3000 in bonds, the proceeds of which would have been used for the repair of the water system.

†**Winchester, Ill.**—The contract has been awarded to KENNEDY CO., Chicago Heights, Ill., at \$18,054, for installing a water softening plant at the water works. Bids opened Nov. 16. Noted Oct. 29.

†**Buffalo Center, Iowa.**—The citizens contemplate issuing bonds, the proceeds of which will be used for the extension of the water system and for the construction of an electric-light plant. C. H. Galagan is City Clerk.

†**Council Bluffs, Iowa.**—According to press reports the contract has been awarded to CAST IRON PIPE CO., Kansas City, Mo., for 16,600 ft. of c.-l. pipe.

†**Crawfordsville, Iowa.**—Press reports state that bids will be received in February for the construction of a water system estimated to cost \$10,000.

†**Hottelmann, Iowa.**—(Official)—Bids were received, Dec. 18, by the Board of Water Works Trustees, for constructing concrete dams as follows: J. W. TURNER IMPROVEMENT CO., Des Moines, at \$50,880 (awarded contract); W. B. Saunders, Minneapolis, Minn., \$22,862; A. J. Martin & Co., Augusta, Ga., \$25,640; Hannan, Hickey Bros. Construction Co., St. Louis, Mo., \$54,000; Middleton & Ludlow, Kansas City, Mo., \$57,552; and Inter-Mountain Bridge & Construction Co., Tecumseh, Mich., \$153,000. Horace A. Brown is Supt. of Water Wks. Noted Dec. 10.
